This book provides an authoritative synopsis of many of the complex features of the essential oils as applied to food science ranging from production and harvesting to the anti spoilage properties of individual components. It embraces a holistic approach to the topic and is divided into two distinct parts: the general aspects and named essential oils. Fundamental Aspects of Corrosion Films in Corrosion Science B.D. Craig, 2013-06-29. The purpose of this book is to stimulate thinking among corrosion scientists and engineers to examine corrosion mechanisms and corrosion control from another perspective. While the presence of corrosion films in electrochemical corrosion has been recognized for over a century, the contribution of these films to all facets of corrosion has not been explored to a significant degree. Rather, the role of films in certain mechanisms, i.e. stress corrosion cracking, has been emphasized yet almost ignored for other corrosion mechanisms. This is viewed by the author as solely attributable to the lack of investigation into and an understanding of the contribution of films to these mechanisms or forms of attack. The lack of emphasis and study of corrosion films and their contribution to all forms of corrosion attack are probably the result of current university instruction that utilizes two popular corrosion texts, Uhlig and Fontana and Greene, for teaching. These texts provide an excellent understanding at the undergraduate level of corrosion fundamentals; however, the major implicit premise in these texts is that bulk properties of an alloy or metal control the corrosion resistance in a particular environment. For many applications and for a simple understanding of corrosion mechanics, this approach is sufficient. Yet research on

corrosion films indicate these films often have an entirely different composition than the bulk metal ratio of alloying elements
