Global Society Puneet Kumar,Vinod Kumar Jain,Dharminder Kumar,2021-03-16 In the constant battle between human intelligence and machine intelligence machines are close to surpassing human intelligence The unrestrained use of digital technologies in automating processes is one of the prime advantages of the third industrial revolution As a result all developed and developing nations have started to digitalize mundane tasks Thus digital technologies for information and communication technologies ICT have achieved high market space in terms of infrastructure building employment generation education sector reforms funds mobilization electronic governance hardware manufacturing software development etc Hence it is evident that every segment of society has been penetrated by ICT or digitalization This book attempts to spotlight areas where AI is thriving FEATURES Impact of digitalization and AI on governance Novel AI practices being followed across the global community in security healthcare crime prevention and detection education agriculture sensor networks etc Innovative techniques that can be adopted to ensure better quality and better delivery of services to the society Avenues for further research by the research community and student fraternity This book is a guide for university students especially those from technical backgrounds industries NGOs and policy makers Fuzzy Multiple Attribute Decision Making Shu-Jen Chen,Ching-Lai Hwang,2012-12-06 This monograph is intended for an advanced undergraduate or graduate course as well as for researchers who want a compilation of developments in this rapidly growing field of operations research This is a sequel to our previous works Multiple Objective Decision Making Methods and Applications A state of the Art Survey No 164 of the Lecture Notes Multiple Attribute Decision Making Methods and Applications A State of the Art Survey No 186 of the Lecture Notes and Group Decision Making under Multiple Criteria Methods and Applications No 281 of the Lecture Notes In this monograph the literature on methods of fuzzy Multiple Attribute Decision Making MADM has been reviewed thoroughly and critically and classified systematically This study provides readers with a capsule look into the existing methods their characteristics and applicability to the analysis of fuzzy MADM problems The basic concepts and algorithms from the classical MADM methods have been used in the development of the fuzzy MADM methods We give an overview of the classical MADM in Chapter II Chapter III presents the basic concepts and mathematical operations of fuzzy set theory with simple numerical examples in a easy to read and easy to follow manner Fuzzy MADM methods basically consist of two phases 1 the aggregation of the performance scores with respect to all the attributes for each alternative and 2 the rank ordering of the alternatives according to the aggregated scores **Pythagorean Neutrosophic Planar Graphs with an Application in Decision-Making** P. Chellamani,D. Ajay,Mohammed M. Al-Shamiri,Rashad Ismail,2023-01-01 Graph theory has a significant impact and is crucial in the structure of many real life situations To simulate uncertainty and ambiguity many extensions of graph theoretical notions were created Planar graphs play a vital role in modelling which has the property of non crossing edges Although crossing edges benefit they have some drawbacks which paved the way for the introduction of planar graphs The overall purpose of the study is to contribute to the conceptual development of the Pythagorean

Neutrosophic graph The basic methodology of our research is the incorporation of the analogous concepts of planar graphs in the Pythagorean Neutrosophic graphs The significant finding of our research is the introduction of Pythagorean Neutrosophic Planar graphs a conceptual blending of Pythagorean Neutrosophic and Planar graphs The idea of Pythagorean Neutrosophic multigraphs and dual graphs are also introduced to deal with the ambiguous situations This paper investigates the Pythagorean Neutrosophic planar values which form the edges of the Pythagorean neutrosophic graphs The concept of Pythagorean Neutrosophic dual graphs isomorphism co weak and weak isomorphism have also been explored for Pythagorean Neutrosophic planar graphs A decision making algorithm was proposed with a numerical illustration by using the Pythagorean Neutrosophic fuzzy graph

Uncertainty Theory Baoding Liu, 2014-11-03 When no samples are available to estimate a probability distribution we have to invite some domain experts to evaluate the belief degree that each event will happen Perhaps some people think that the belief degree should be modeled by subjective probability or fuzzy set theory However it is usually inappropriate because both of them may lead to counterintuitive results in this case In order to rationally deal with belief degrees uncertainty theory was founded in 2007 and subsequently studied by many researchers Nowadays uncertainty theory has become a branch of axiomatic mathematics for modeling belief degrees This is an introductory textbook on uncertainty theory uncertain programming uncertain statistics uncertain risk analysis uncertain reliability analysis uncertain set uncertain logic uncertain inference uncertain process uncertain calculus and uncertain differential equation This textbook also shows applications of uncertainty theory to scheduling logistics networks data mining control and finance

Cost-Benefit Analysis and the Theory of Fuzzy Decisions Kofi Kissi Dompere, 2013-03-20 The genus of definitions for the theoretical sciences is the province of the habitus of the intellective intention for the practical sciences however that of the effective intention the objects and ends constitute the specific difference There is nothing in the intellect that has not already been in the senses that is in the sensory organs that has not already been in sensible things from which are distinguished things not perceptible to the senses Nothing can be of the mind sensation and the thing inferred therefrom except the operation itself Real learning is cognition of things in themselves It thus has the basis of its certainty in the known thing This is established in two ways by demonstration in the case of contemplative things and by induction in the case of things perceptible to the senses In contrast with real learning there is possible probable and fictive learning Antonius Gvilielmus Amo Afer 1827 This research has been long in the making Its conception began in my last years in the doctoral program at Temple University Philadelphia Pa It was simultaneously conceived with my two books on the Neo Keynesian Theory of Optimal aggregate investment and output dynamics 201 202 as well as reflections on the methodology of decision choice rationality and development economics 440 441 Economic theories and social policies were viewed to have among other things one important thing in common in that they relate to decision making under different

Cost-Benefit Analysis and the Theory of Fuzzy Decisions K. K. Dompere, 2004-07-02 This monograph is devoted to the identification and

measurement theory of costs and benefits in a fuzzy information environment The process of cost benefit analysis is presented requiring the development of real cost benefit databases and the construction of cost benefit criterion These steps are accomplished with various theoretical constructs that provide sets of self contained algorithms for application This book integrates cost benefit analysis theory of fuzzy decisions and social decisions into unified decision algorithms accessible to practitioners researchers and graduate students It features the essentials of fuzzy mathematics and algorithms in a comprehensive way exposing a multi disciplinary approach for the development of cost benefit decision making in the framework of fuzziness and soft computing

Systems Science Frank A. Stowell,Daune West,James G. Howell,2012-12-06 As we approach the end of the 20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves The technological age has meant that the human being is able to contemplate activities which defy nature For example some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour seven miles above the surface of the earth It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems Air transportation has provided a number of benefits including such disparate examples such as enabling holidays famine relief and the cross fertilisation of cultural practices from other lands Equally there have been undesirable effects such as enabling the means of mass destruction interference in other cultures and the speedy transportation of disease Moreover the physical presence of the aeroplane itself represents the consumption of fossil fuels a source of pollution and a change in the way think about life The view expressed here is of course the view of an inhabitant of the western world
