Generalized Linear Models A Unified Approach:

Generalized Linear Models Jeff Gill,Michelle Torres,2019-05-14 Generalized Linear Models A Unified Approach provides an introduction to and overview of GLMs with each chapter carefully laying the groundwork for the next The Second Edition provides examples using real data from multiple fields in the social sciences such as psychology education economics and political science including data on voting intentions in the 2016 U S Republican presidential primaries The Second Edition also strengthens material on the exponential family form including a new discussion on the multinomial distribution adds more information on how to interpret results and make inferences in the chapter on estimation procedures and has a new section on extensions to generalized linear models Software scripts supporting documentation data for the examples and some extended mathematical derivations are available on the authors websites as well as through the texttt R package texttt GLMpack Supporting material data and code to replicate the examples in the book can be found in the GLMpack package on CRAN or on the website *Generalized Linear Models* Dipak K. Dey,Sujit K. Ghosh,Bani K. Mallick,2000-05-25 This volume describes how to conceptualize perform and critique traditional generalized linear models GLMs from a Bayesian perspective and how to use modern computational methods to summarize inferences using simulation Introducing dynamic modeling for GLMs and containing over 1000 references and equations Generalized Linear Models considers **Analysis of Generalized Linear Mixed Models in the Agricultural and Natural Resources Sciences** Edward E. Gbur,Walter W. Stroup,Kevin S. McCarter,Susan Durham,Linda J. Young,Mary Christman,Mark West,Matthew Kramer,2020-01-22 Generalized Linear Mixed Models in the Agricultural and Natural Resources Sciences provides readers with an understanding and appreciation for the design and analysis of mixed models for non normally distributed data It is the only publication of its kind directed specifically toward the agricultural and natural resources sciences audience Readers will especially benefit from the numerous worked examples based on actual experimental data and the discussion of pitfalls associated with incorrect analyses Ethnographic Free-List Data Benjamin Grant Purzycki,2025-03-18 Ethnographic Free List Data Management and Analysis With Examples in R details a method that involves research participants listing what they know or think about the researcher s topic of interest While researchers typically report these free list analyses in isolation this book incorporates them with other analytical methods and demonstrates how ethnographic free lists can be useful to a broad social science audience The first half of the book covers descriptive methods and the second half incorporates insights from the early chapters into a predictive statistical framework Author Benjamin Grant Purzycki explains how to collect clean and manage free list data and how to use R to calculate and visualize the data Multiple Regression with Discrete Dependent Variables John G. Orme,Terri Combs-Orme,2009-03-25 This volume presents detailed discussions of regression models that are appropriate for a variety of discrete dependent variables Clear language guides the reader briefly through each step of the analysis using SPSS and result presentation to enhance understanding of the important link function Multidimensional

Item Response Theory Wes Bonifay, 2019-12-10 Several decades of psychometric research have led to the development of sophisticated models for multidimensional test data and in recent years multidimensional item response theory MIRT has become a burgeoning topic in psychological and educational measurement Considered a cutting edge statistical technique the methodology underlying MIRT can be complex and therefore doesn't receive much attention in introductory IRT courses However author Wes Bonifay shows how MIRT can be understood and applied by anyone with a firm grounding in unidimensional IRT modeling His volume includes practical examples and illustrations along with numerous figures and diagrams Multidimensional Item Response Theory includes snippets of R code interspersed throughout the text with the complete R code included on an accompanying website to guide readers in exploring MIRT models estimating the model parameters generating plots and implementing the various procedures and applications discussed throughout the book

Researchers in the social sciences and beyond are dealing more and more with massive quantities of text data requiring

analysis from historical letters to the constant stream of content in social media Traditional texts on statistical analysis have focused on numbers but this book will provide a practical introduction to the quantitative analysis of textual data Using up to date R methods this book will take readers through the text analysis process from text mining and pre processing the text to final analysis It includes two major case studies using historical and more contemporary text data to demonstrate the practical applications of these methods Currently there is no introductory how to book on textual data analysis with R that is up to date and applicable across the social sciences Code and a variety of additional resources to enrich the use of this book are available on an accompanying website These resources include data files from the 39th Congress and also the collection of tweets of President Trump now no longer available to researchers via Twitter itself

Using Time Series to Analyze Long-Range Fractal Patterns Matthijs Koopmans,2020-09-23 Using Time Series to Analyze Long Range Fractal Patterns presents methods for describing and analyzing dependency and irregularity in long time series Irregularity refers to cycles that are similar in appearance but unlike seasonal patterns more familiar to social scientists repeated over a time scale that is not fixed Until now the application of these methods has mainly involved analysis of dynamical systems outside of the social sciences but this volume makes it possible for social scientists to explore and document fractal patterns in dynamical social systems Author Matthijs Koopmans concentrates on two general approaches to irregularity in long time series autoregressive fractionally integrated moving average models and power spectral density analysis He demonstrates the methods through two kinds of examples simulations that illustrate the patterns that might be encountered and serve as a benchmark for interpreting patterns in real data and secondly social science examples such as long range data on monthly unemployment figures daily school attendance rates daily numbers of births to teens and weekly survey data on political orientation Data and R scripts to replicate the analyses are available on an accompanying website
