Karl Branting, 2013-04-17 The judiciary is in the early stages of a transformation in which AI Artificial Intelligence technology will help to make the judicial process faster cheaper and more predictable without compromising the integrity of judges discretionary reasoning Judicial decision making is an area of daunting complexity where highly sophisticated legal expertise merges with cognitive and emotional competence How can AI contribute to a process that encompasses such a wide range of knowledge judgment and experience Rather than aiming at the impossible dream or nightmare of building an automatic judge AI research has had two more practical goals producing tools to support judicial activities including programs for intelligent document assembly case retrieval and support for discretionary decision making and developing new analytical tools for understanding and modeling the judicial process such as case based reasoning and formal models of dialectics argumentation and negotiation Judges squeezed between tightening budgets and increasing demands for justice are desperately trying to maintain the quality of their decision making process while coping with time and resource limitations Flexible AI tools for decision support may promote uniformity and efficiency in judicial practice while supporting rational judicial discretion Similarly AI may promote flexibility efficiency and accuracy in other judicial tasks such as drafting various judicial documents The contributions in this volume exemplify some of the directions that the AI transformation of the judiciary will take *Encyclopedia of Library and Information Science* Allen Kent, 1998-05-15 Automated Discourse Generation to the User Centered Revolution 1970 1995

Current Issues in Computational Linguistics: In Honour of Don Walker Antonio Zampolli, Nicoletta Calzolari, Martha Palmer, 1994-06-30 With this volume in honour of Don Walker *Linguistica Computazionale* continues the series of special issues dedicated to outstanding personalities who have made a significant contribution to the progress of our discipline and maintained a special collaborative relationship with our Institute in Pisa I take the liberty of quoting in this preface some of the initiatives Pisa and Don Walker have jointly promoted and developed during our collaboration because I think that they might serve to illustrate some outstanding features of Don s personality in particular his capacity for identifying areas of potential convergence among the different scientific communities within our field and establishing

concrete forms of cooperation These initiatives also testify to his continuous and untiring work dedicated to putting people into contact and opening up communication between them collecting and disseminating information knowledge and resources and creating shareable basic infrastructures needed for progress in our field Our collaboration began within the Linguistics in Documentation group of the FID and continued in the framework of the CCL International Committee for Computational Linguistics In 1982 this collaboration was strengthened when at CO LING in Prague I was invited by Don to join him in the organization of a series of workshops with participants of the various communities interested in the study development and use of computational lexica *Advances in Artificial Intelligence* Jacques Wainer,1995-09-27 Invited papers knowledge representation and automated reasoning tutoring systems machine learning neural networks distributed AI knowledge acquisition and knowledge bases posters *The Oxford Handbook of Computational Linguistics* Ruslan Mitkov,2004 This handbook of computational linguistics written for academics graduate students and researchers provides a state of the art reference to one of the most active and productive fields in linguistics *One-on-One Tutoring by Humans and Computers* Martha Evens,Joel Michael,2006-08-15 One on One Tutoring by Humans and Computers articulates the CIRCSIM Tutor project an attempt to develop a computer tutor that generates a natural language dialogue with a student Editors Martha Evens and Joel Michael present the educational context within which the project was launched as well as research into tutoring the process of implementation of CIRCSIM Tutor and the results of using CIRCSIM Tutor in the classroom The domain of this project is cardiovascular physiology specifically targeting first year medical students though the idea is applicable to the development of intelligent tutoring systems across populations disciplines and domains This 5 year long project was motivated by the belief that students need assistance in building appropriate mental models of complex physiological phenomena as well as practice in expressing these ideas in their own words to fully develop those models and experience in problem solving to use those models effectively The book outlines directions for future research and includes distinct features such as detailed studies of human one on one tutoring learning outcomes resulting from use of the tutor natural language input parsed and translated into logical form and natural language output generated using the LFG paradigm This volume will appeal to educators who want to improve human tutoring or use computer tutors in the classroom and it will interest computer scientists who want to build those computer tutors as well as anyone who believes that language is central to teaching and learning Computational Models of Mixed-Initiative Interaction Susan Haller,Susan McRoy,Alfred Kobsa,2013-11-11 Computational Models of Mixed Initiative Interaction brings together research that spans several disciplines related to artificial intelligence including natural language processing information retrieval machine learning planning and computer aided instruction to account for the role that mixed initiative plays in the design of intelligent systems The ten contributions address the single issue of how control of an interaction should be managed when abilities needed to solve a problem are distributed among collaborating agents Managing control of an interaction among

humans and computers to gather and assemble knowledge and expertise is a major challenge that must be met to develop machines that effectively collaborate with humans This is the first collection to specifically address this issue Generating Natural Language Descriptions with Integrated Text and Examples University of Southern California. Information Sciences Institute, Vibhu O. Mittal, 1993 Abstract Good documentation is critical for user acceptance of any system Advances in areas such as knowledge based systems text generation and multi media have now made it possible to investigate the automatic generation of documentation from the underlying knowledge bases Empirical studies have shown that examples can greatly increase the effectiveness of system documentation However studies also show that badly integrated text and examples can be actually detrimental compared to using either text or examples alone It is thus clear that in order to provide useful documentation automatically a system must be capable of providing well integrated examples to illustrate its points This thesis builds upon previous work in natural language generation example generation cognitive and educational psychology to identify relevant issues in the generation of coherent descriptions that integrate text and examples We identify how text and examples co constrain each other and show that a system must consider example generation as an integral part of the generation process We describe an implementation and present an initial evaluation of the system s effectiveness
