Learning How:

Learning How to Learn Barbara Oakley, PhD, Terrence Sejnowski, PhD, Alistair McConville, 2018-08-07 A surprisingly simple way for students to master any subject based on one of the world's most popular online courses and the bestselling book *A Mind for Numbers*. *A Mind for Numbers* and its wildly popular online companion course *Learning How to Learn* have empowered more than two million learners of all ages from around the world to master subjects that they once struggled with. Fans often wish they'd discovered these learning strategies earlier and ask how they can help their kids master these skills as well. Now in this new book for kids and teens the authors reveal how to make the most of time spent studying. We all have the tools to learn what might not seem to come naturally to us at first; the secret is to understand how the brain works so we can unlock its power. This book explains why sometimes letting your mind wander is an important part of the learning process. How to avoid *rut* think in order to think outside the box. Why having a poor memory can be a good thing. The value of metaphors in developing understanding. A simple yet powerful way to stop procrastinating. Filled with illustrations, application questions and exercises, this book makes learning easy and fun.

Learning How to Learn Mary James, Paul Black, Patrick Carmichael, Colin Conner, Peter Dudley, Alison Fox, David Frost, Leslie Honour, John MacBeath, Bethan Marshall, Robert McCormick, David Pedder, Richard Procter, Sue Swaffield, DYLAN WILIAM, 2006-10-13 Learning how to learn is an essential preparation for lifelong learning. This book offers a set of in-service resources to help teachers develop new classroom practices informed by sound research. It builds on previous work associated with formative assessment or assessment for learning. However, it adds an important new dimension by taking account of the conditions within schools that are conducive to the promotion in classrooms of learning how to learn as an extension of assessment for learning. Among the materials included, you will find an introductory in-service session, self-evaluation questionnaires, an action planning activity, workshops, tools for school development, a network mapping activity, guidance about different ways of using the resources, teachers' descriptions of ways they have used or adapted them, references to further information and advice. In addition, there is a support website and examples of how individual schools have used or adapted these materials to maximize their benefits.

Learning How to Hope Sarah M. Stitzlein, 2019-11-27 Democracy is struggling in America. Citizens increasingly feel cynical about an intractable political system while hyper-partisanship has dramatically shrunk common ground and intensified the extremes. Out of this deepening sense of political despair, philosopher of education Sarah M. Stitzlein seeks to revive democracy by teaching citizens how to hope. Offering an informed call to citizen engagement, Stitzlein directly addresses presidential campaigns including how to select candidates who support citizens in enacting and sustaining hope. Drawing on examples from American history and pragmatist philosophy, this book explains how hope can be cultivated in schools and sustained through action in our communities. It describes what hope is, why it matters to democracy, and how to teach it. This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at
