

A low-angle, upward-looking photograph of several tall skyscrapers in a city, creating a sense of height and architectural scale. The buildings are rendered in a dark, muted blue-grey tone. In the bottom right corner, there are abstract, overlapping shapes in bright blue, red, and purple, adding a modern, graphic element to the composition.

**Learning to Rival** Linda Flower, Elenore Long, Lorraine Higgins, 2000-04 The authors of this book set out on an expedition of sorts to study rival hypothesis thinking or rivaling an important literate practice in which people explore open questions through an analysis of multiple perspectives and evidence *innovations in Learning* Leona Schauble, Robert Glaser, 2013-04-03 This volume documents the growth of a new kind of interdisciplinary teamwork that is evolving among practitioners researchers teacher educators and community partners Its premise the design of learning environments and the development of theory must proceed in a mutually supportive fashion Scientific researchers have learned that a prerequisite to studying the kinds of learning that matter is helping to shoulder the responsibility for ensuring that these forms of learning occur To support and study learning researchers are increasingly making major and long term investments in the design and maintenance of contexts for learning Practitioners are assuming new roles as well reflecting an increasing awareness of the need to move beyond skillful doing If developing learning contexts are to be protected within and expanded beyond the systems that surround them it is necessary to foster professional communities that will support reflection about practice including the generation and evaluation of rich and flexible environments for student thinking One consequence of recent reforms is that teachers are increasingly regarding such tasks as central to their professional development *Innovations in Learning* New Environments for Education describes coordinated interaction between educational design on the one hand and the development of learning theory on the other through a series of examples These examples have been chosen because they are continuing proven programs with evidence of success Contributors to the volume are researchers and practitioners who have played a role in inventing these programs and have guided their development over a period of years Rather than choosing illustrations of a pipeline or application model of research from research and then to practice the editors of this volume have selected interventions in which researchers and practitioners work together persistently to forge common understanding Such activity is necessarily interdisciplinary often encompassing long spans of time and is more akin to engineering in the field than to laboratory science The common themes that emerge from this activity for example the role of tools talk and community belong exclusively neither to theory nor to practice but to their intersection in commitment to specific contexts of learning and continuing contributions to practice and underlying theory This volume is organized into three sections that reflect different levels and kinds of learning contexts Each of these levels has been the focus of recent cognitive and reform applications to learning and schooling The first offers examples of effective learning in informal settings the second discusses innovative approaches to schooling at the classroom level and the third reviews reforms that regard the entire school as the appropriate unit of change **Neural Nets and Surroundings** Bruno Apolloni, Simone Bassis, Anna Esposito, Francesco Carlo Morabito, 2012-12-25 This volume collects a selection of contributions which has been presented at the 22nd Italian Workshop on Neural Networks the yearly meeting of the Italian Society for Neural Networks SIREN The

conference was held in Italy Vietri sul Mare Salerno during May 17 19 2012 The annual meeting of SIREN is sponsored by International Neural Network Society INNS European Neural Network Society ENNS and IEEE Computational Intelligence Society CIS The book as well as the workshop is organized in three main components two special sessions and a group of regular sessions featuring different aspects and point of views of artificial neural networks and natural intelligence also including applications of present compelling interest      Clustering Rui Xu,Don Wunsch,2008-11-03 This is the first book to take a truly comprehensive look at clustering It begins with an introduction to cluster analysis and goes on to explore proximity measures hierarchical clustering partition clustering neural network based clustering kernel based clustering sequential data clustering large scale data clustering data visualization and high dimensional data clustering and cluster validation The authors assume no previous background in clustering and their generous inclusion of examples and references help make the subject matter comprehensible for readers of varying levels and backgrounds      *The Alex Studies* Irene M. PEPPERBERG,Irene M Pepperberg,2009-06-30 Can a parrot understand complex concepts and mean what it says Since the early 1900s most studies on animal human communication have focused on great apes and a few cetacean species Birds were rarely used in similar studies on the grounds that they were merely talented mimics that they were after all birdbrains Experiments performed primarily on pigeons in Skinner boxes demonstrated capacities inferior to those of mammals these results were thought to reflect the capacities of all birds despite evidence suggesting that species such as jays crows and parrots might be capable of more impressive cognitive feats Twenty years ago Irene Pepperberg set out to discover whether the results of the pigeon studies necessarily meant that other birds particularly the large brained highly social parrots were incapable of mastering complex cognitive concepts and the rudiments of referential speech Her investigation and the bird at its center a male Grey parrot named Alex have since become almost as well known as their primate equivalents and no less a subject of fierce debate in the field of animal cognition This book represents the long awaited synthesis of the studies constituting one of the landmark experiments in modern comparative psychology      Intelligent Science and Intelligent Data Engineering Yanning Zhang,Zhi-Hua Zhou,Changshui Zhang,Ying Li,2012-07-23 This book constitutes the proceedings of the Sino foreign interchange Workshop on Intelligence Science and Intelligent Data Engineering IScIDE 2011 held in Xi an China in October 2011 The 97 papers presented were carefully peer reviewed and selected from 389 submissions The IScIDE papers in this volume are organized in topical sections on machine learning and computational intelligence pattern recognition computer vision and image processing graphics and computer visualization knowledge discovering data mining web mining multimedia processing and application      Neural Networks in a Softcomputing Framework Ke-Lin Du,M.N.S. Swamy,2006-08-02 Conventional model based data processing methods are computationally expensive and require experts knowledge for the modelling of a system Neural networks are a model free adaptive parallel processing solution This textbook provides a powerful and universal paradigm for information processing it reviews the most popular neural network

methods and their associated techniques Each chapter has a systematic survey of each neural network model Computational intelligence topics like fuzzy logic and genetic algorithms tools for neural network learning are introduced Array signal processing problems are used to show the applications of each model This is an ideal textbook for graduate students and researchers as well as introducing the basics the exhaustive list of references included will aid their future research It is also a valuable reference for scientists and practitioners working in pattern recognition signal processing speech and image processing data analysis and A I

Nehaniv, Kerstin Dautenhahn, 2009-04-09 Mechanisms of imitation and social matching play a fundamental role in development communication interaction learning and culture Their investigation in different agents animals humans and robots has significantly influenced our understanding of the nature and origins of social intelligence Whilst such issues have traditionally been studied in areas such as psychology biology and ethnology it has become increasingly recognised that a constructive approach towards imitation and social learning via the synthesis of artificial agents can provide important insights into mechanisms and create artefacts that can be instructed and taught by imitation demonstration and social interaction rather than by explicit programming This book studies increasingly sophisticated models and mechanisms of social matching behaviour and marks an important step towards the development of an interdisciplinary research field consolidating and providing a valuable reference for the increasing number of researchers in the field of imitation and social learning in robots humans and animals      Reader's Guide to the Social Sciences Jonathan Michie, 2014-02-03 This 2 volume work includes approximately 1 200 entries in A Z order critically reviewing the literature on specific topics from abortion to world systems theory In addition nine major entries cover each of the major disciplines political economy management and business human geography politics sociology law psychology organizational behavior and the history and development of the social sciences in a broader sense      **Soft Computing and Human-Centered Machines** Z.-Q. Snowdon,Martine Hausberger,1997-03-20 For at least 30 years there have been close parallels between studies of birdsong development and those of the development of human language Both song and language require species specific stimulation at a sensitive period in development and subsequent practice through subsong and plastic song in birds and babbling in infant humans leading to the development of characteristic vocalisations for each species This book illustrates how social interactions during development can shape vocal learning and extend the sensitive period beyond infancy and how social companions can induce flexibility even into adulthood Social companions in a wide range of species including birds and humans but also cetaceans and nonhuman primates play important roles in shaping vocal production as well as the

comprehension and appropriate usage of vocal communication This book will be required reading for students and researchers interested in animal and human communication and its development

**Bayesian Analysis and Uncertainty in Economic Theory** Richard Michael Cyert,2012-12-06

We began this research with the objective of applying Bayesian methods of analysis to various aspects of economic theory We were attracted to the Bayesian approach because it seemed the best analytic framework available for dealing with decision making under uncertainty and the research presented in this book has only served to strengthen our belief in the appropriateness and usefulness of this methodology More specifically we believe that the concept of organizational learning is fundamental to decision making under uncertainty in economics and that the Bayesian framework is the most appropriate for developing that concept The central and unifying theme of this book is decision making under uncertainty in microeconomic theory Our fundamental aim is to explore the ways in which firms and households make decisions and to develop models that have a strong empirical connection Thus we have attempted to contribute to economic theory by formalizing models of the actual process of decision making under uncertainty Bayesian methodology provides the appropriate vehicle for this formalization

Theoretical Models and Processes of Literacy Donna E. Alvermann,Norman J. Unrau,Misty Sailors,Robert B. Ruddell,2018-10-03 The Seventh Edition of this foundational text represents the most comprehensive source available for connecting multiple and diverse theories to literacy research broadly defined and features both cutting edge and classic contributions from top scholars Two decades into the 21st century the Seventh Edition finds itself at a crossroads and differs from its predecessors in three major ways the more encompassing term literacy replaces reading in the title to reflect sweeping changes in how readers and writers communicate in a digital era the focus is on conceptual essays rather than a mix of essays and research reports in earlier volumes and most notably contemporary literacy models and processes enhance and extend earlier theories of reading and writing Providing a tapestry of models and theories that have informed literacy research and instruction over the years this volume's strong historical grounding serves as a springboard from which new perspectives are presented The chapters in this volume have been selected to inspire the interrogation of literacy theory and to foster its further evolution This edition is a landmark volume in which dynamic dialogic and generative relations of power speak directly to the present generation of literacy theorists and researchers without losing the historical contexts that preceded them Some additional archival essays from previous editions are available on the book's eResource New to the Seventh Edition Features chapters on emerging and contemporary theories that connect directly to issues of power and contrasts new models against more established counterparts New chapters reflect sweeping changes in how readers and writers communicate in a digital era Slimmer volume is complemented by some chapters from previous editions available online

Agliardi, 1998-02-09 The objective of this book is to study the economy as a complex system and to show that the presence of self reinforcing mechanisms in very different economic problems gives rise to common regularities and common qualitative properties Dynamic systems of the self reinforcing type are considered that is systems with local positive feedbacks Economic theory maintains that positive feedbacks can cause multiple equilibria and possible inefficiency This book concentrates on the less familiar properties of lock in path dependence and symmetry breaking
