## How It All Works

## The Internet and the World Wide Web

David and Pip are talking about going online.

Look right, I want the Internet to watch a funny video about this.

I want to go on the Internet. I want to search about how to help me with my homework.

Oh, David is, how you found those words before? Or you know what they mean?

## **Learning To Use The World Wide Web Academic Edition:**

**Learning and Teaching on the World Wide Web** Christopher R. Wolfe, 2001-03-21 This book is about using the Internet as a teaching tool. It starts with the psychology of the learner and looks at how best to fit technology to the student rather than the other way around. The authors include leading authorities in many areas of psychology and the book takes a broad look at learners as people. Thus it includes a wide range of materials from how the eye reads moving graphs on a Web page to how people who have never met face to face can interact on the Internet and create communities of learners. The book considers many Internet technologies but focuses on the World Wide Web and new hybrid technologies that integrate the Web with other communications technologies. This book is essential to researchers in psychology and education who are interested in learning. It is also used in college and graduate courses in departments of psychology and educational psychology. Teachers and trainers at any level who are using technology in their teaching or thinking about it find this book very useful.

**Key Features** Distinguished authors with considerable expertise in their fields. Broad intra disciplinary perspective on learning and teaching on the Web. Focus on the Web and emerging Web based technologies. Special attention to conducting educational research on line. Emphasis on the Social and Psychological Context. Analyses of effective Web based learning resources. Firmly grounded in contemporary psychological research and theory. [Resources in Education](#)

, 2001-10 *Technology Acceptance in Education* Timothy Teo, 2011-10-26 Technology acceptance can be defined as a user's willingness to employ technology for the tasks it is designed to support. Over the years acceptance researchers have become more interested in understanding the factors influencing the adoption of technologies in various settings. From the literature much research has been done to understand technology acceptance in the business contexts. This is understandable given the close relationship between the appropriate uses of technology and profit margin. In most of the acceptance studies researchers have sought to identify and understand the forces that shape users' acceptance so as to influence the design and implementation process in ways to avoid or minimize resistance or rejection when users interact with technology. Traditionally it has been observed that developers and procurers of technological resources could rely on authority to ensure that technology was used, which is true in many industrial and organizational contexts. However, with the increasing demands for educational applications of information technology and changing working practices, there is a need to re-examine user acceptance issues as they emerge within and outside of the contexts in which technology was implemented. This is true in the education milieu where teachers exercise the autonomy to decide on what and how technology will be used for teaching and learning purposes. Although they are guided by national and local policies to use technology in the classrooms, teachers spent much of their planning time to consider how technology could be harnessed for effective lesson delivery and assessment to be conducted. These circumstances have provided the impetus for researchers to study technology acceptance in educational settings. Although these studies have typically involved students and teachers as participants, their findings have far reaching

implications for school leaders policy makers and other stakeholders The book is a critical and specialized source that describes recent research on technology acceptance in education represented by educators and researchers from around the world such as Australia Belgium China Hong Kong Malaysia Singapore United Kingdom and United States of America
