1968 as a direct follow up on a meeting on Approximation Theory 1 held there from August 4 10 1963 The emphasis was on theoretical aspects of approximation rather than the numerical side Particular importance was placed on the related fields of functional analysis and operator theory Thirty nine papers were presented at the conference and one more was subsequently submitted in writing All of these are included in these proceedings In addition there is areport on new and unsolved problems based upon a special problem session and later communications from the partici pants A special role is played by the survey papers also presented in full They cover a broad range of topics including invariant subspaces scattering theory Wiener Hopf equations interpolation theorems contraction operators approximation in Banach spaces etc The papers have been classified according to subject matter into five chapters but it needs little emphasis that such thematic groupings are necessarily arbitrary to some extent The Proceedings are dedicated to the memory of Jean Favard It was Favard who gave the Oberwolfach Conference of 1963 a special impetus and whose absence was deeply regretted this time An appreciation of his li fe and contributions was presented verbally by Georges Alexits while the written version bears the signa tures of both Alexits and Marc Zamansky Our particular thanks are due to E

Topological Fixed Point Principles for Boundary Value Problems J. Andres,Lech Górniewicz,2013-04-17 The book is devoted to the topological fixed point theory both for single valued and multivalued mappings in locally convex spaces including its application to boundary value problems for ordinary differential equations inclusions and to multivalued dynamical systems It is the first monograph dealing with the topological fixed point theory in non metric spaces Although the theoretical material was tendentiously selected with respect to applications the text is self contained Therefore three appendices concerning almost periodic and derivo periodic single valued multivalued functions and multivalued fractals are supplied to the main three chapters
