## **Lecture Notes On Empirical Software Engineering:**

*Lecture Notes on Empirical Software Engineering* Natalia Juristo, Ana M. Moreno, 2003-01-01 Empirical verification of knowledge is one of the foundations for developing any discipline. As far as software construction is concerned, the empirically verified knowledge is not only sparse but also not very widely disseminated among developers and researchers. This book aims to spread the idea of the importance of empirical knowledge in software development from a highly practical viewpoint. It has two goals: 1. Define the body of empirically validated knowledge in software development so as to advise practitioners on what methods or techniques have been empirically analysed and what the results were. 2. As empirical tests have traditionally been carried out by universities or research centres, propose techniques applicable by industry to check on the software development technologies they use. Contents: Limitations of Empirical Testing; Technique Knowledge; N. Juristo et al. Replicated Studies; Building a Body of Knowledge about Software Reading Techniques; F. Shull et al. Combining Data from Reading Experiments in Software Inspections; O. Co. A Feasibility Study; C. Wholin et al. External Experiments; O. Co. A Workable Paradigm for Collaboration Between Industry and Academia; F. Houdek. Quasi Experimental Studies in Industrial Settings; O. Laitenberger. Experimental Validation of New Software Technology; M. V. Zelkowitz et al. Readership: Researchers, academics, and professionals in software engineering.

**Perspectives on the Future of Software Engineering** Jürgen Münch, Klaus Schmid, 2013-06-13 The dependence on quality software in all areas of life is what makes software engineering a key discipline for today's society. Thus, over the last few decades, it has been increasingly recognized that it is particularly important to demonstrate the value of software engineering methods in real world environments, a task which is the focus of empirical software engineering. One of the leading protagonists of this discipline worldwide is Prof. Dr. h. c. Dieter Rombach, who dedicated his entire career to empirical software engineering. For his many important contributions to the field, he has received numerous awards and recognitions, including the U.S. National Science Foundation's Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany. He is a Fellow of both the ACM and the IEEE Computer Society. This book, published in honor of his 60th birthday, is dedicated to Dieter Rombach and his contributions to software engineering in general, as well as to empirical software engineering in particular. This book presents invited contributions from a number of the most internationally renowned software engineering researchers, like Victor Basili, Barry Boehm, Manfred Broy, Carlo Ghezzi, Michael Jackson, Leon Osterweil, and of course by Dieter Rombach himself. Several key experts from the Fraunhofer IESE, the institute founded and led by Dieter Rombach, also contributed to the book. The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field. The book is structured into three main parts. The first part focuses on the classical foundations of software engineering, such as notations, architecture, and processes, while the second addresses empirical software engineering in particular, as the core field of Dieter Rombach's contributions. Finally, the third part discusses a broad vision for the future of

Osterweil, 2005-12-09 This book constitutes the thoroughly refereed post proceedings of the International Software Process Workshop SPW 2005 held in Beijing China in May 2005 The 30 papers presented here together with 11 keynote addresses are organized in topical sections on process content process tools and metrics process management process representation and analysis as well as experience reports      *Software Process Improvement* T. Dingsøyr, 2005-01-11 This was the first year that the European Software Process Improvement Conference EuroSPI had a separate research track with its own proceedings The EuroSPI conference is in its eleventh year and has become the main meeting place in Europe for the software industry and academia to discuss software process improvement The conference deals with software process improvement in a broad sense investigating organizational issues as well as methods and tools for software process improvement Euro SPI is an initiative financed by a consortium of Nordic research centers and user networks SINTEF DELTA and STTF ASQF a German quality assurance association and ISCN in Ireland the coordinating network partner The research papers describe innovative and significant work in software process improvement which is relevant to the software industry The papers are readable for a scientific and industrial audience and support claims with appropriately described evidence or references to relevant literature Thirty one papers were submitted in this year's research track and each paper was sent to three or four members of the program committee or additional reviewers Papers were evaluated according to originality significance of the contribution quality of the written and graphical presentation research method applied and appropriateness of comparison to relevant research and literature Almost 100 reviews were received and 18 papers were selected for presentation in the research track giving a rejection rate of 42% Many high quality submissions had to be rejected because of limited space in the conference program The selected papers cover a wide area in software process improvement from proving agile development methods techniques for software process improvement and knowledge management in software companies to effort estimation and global software development      **Simula Research Laboratory** Aslak Tveito, Are Magnus Bruaset, Olav Lysne, 2009-10-22 When researchers gather around lunch tables at conferences or in bars there are some topics that are more or less compulsory The discussions are about the ho less management of the university or the lab where they are working the lack of funding for important research politicians inability to grasp the potential of a p ticularly promising eld and the endless series of committees that seem to produce very little progress It is common to meet excellent researchers claiming that they have almost no time to do research because writing applications lecturing and tending to committee work seem to take most of their time Very few ever come into a position to do something about it With Simula we have this chance We were handed a considerable annual grant and more or less left to ourselves to do whatever we thought would produce the best possible results We wanted to create a place where researchers could have the time and conditions necessary to re ect over dif cult problems uninterrupted by mundane dif culties where doctoral students could be properly supervised and learn

the craft of research in a well organized and professional manner and where entrepreneurs could find professional support in developing their research based applications and innovations

*Metrics For Software Conceptual Models* Marcela Genero, Mario Piattini, Coral Calero, 2005-01-04 The idea that measuring quality is the key to developing high quality software systems is gaining relevance Moreover it is widely recognised that the key to obtaining better software systems is to measure the quality characteristics of early artefacts produced at the conceptual modelling phase Therefore improving the quality of conceptual models is a major step towards the improvement of software system development Since the 1970s software engineers had been proposing high quantities of metrics for software products processes and resources but had not been paying any special attention to conceptual modelling By the mid 1990s however the need for metrics for conceptual modelling had emerged This book provides an overview of the most relevant existing proposals of metrics for conceptual models covering conceptual models for both products and processes
