Environmental Research Papers, 1989 Landscapes between Then and Now Nicola Brandt, 2020-09-08 In Landscapes Between Then and Now Nicola Brandt examines the increasingly compelling and diverse cross disciplinary work of photographers and artists made during the transition from apartheid to post apartheid and into the contemporary era By examining specific artworks made in South Africa Namibia and Angola Brandt sheds light on established and emerging themes related to aftermath landscapes embodied histories un belonging spirituality and memorialization She shows how landscape and identity are mutually constituted and profiles this process against the background of the legacy of the acutely racially divisive policies of the apartheid regime that are still reflected on the land As a signpost throughout the book Brandt draws on the work of the renowned South African photographer Santu Mofokeng and his critical thinking about landscape Landscapes Between Then and Now explores how practitioners who engage with identity and their physical environment as a social product might reveal something about the complex and fractured nature of postcolonial and contemporary societies Through diverse strategies and aesthetics they comment on inherent structures and epistemologies of power whilst also expressing new and radical forms of self determinism Brandt asks why these cross disciplinary works ranging from social documentary to experimental performance and embodied practices are critical now and what important possibilities for social and political reflection and engagement they suggest *Voice & Vision* Mick Hurbis-Cherrier, 2007 Voice Vision is a comprehensive manual for the independent filmmakers and film students who want a solid grounding in the tools techniques and processes of narrative film in order to achieve their artistic vision This book includes essential and detailed information on relevant film and digital video tools a thorough overview of the filmmaking stages and the aesthetic considerations for telling a visual story The ultimate goal of this book is to help you develop your creative voice while acquiring the solid practical skills and confidence to use it Unlike many books that privilege raw technical information or the line producing aspects of production Voice Vision places creativity visual expression and cinematic ideas front and center After all every

practical decision a filmmaker makes like choosing a location an actor a film stock a focal length a lighting set up an edit point or a sound effect is also an expressive one and should serve the filmmaker's vision Every decision from the largest conceptual choices to the smallest practical solutions has a profound impact on what appears on the screen and how it moves an audience In Practice sidebars throughout Voice Vision connect conceptual aesthetic and technical issues to their application in the real world Some provide a brief analysis of a scene or technique from easily rentable films which illustrate how a specific technology or process is used to support a conceptual narrative or aesthetic choice Others recount common production challenges encountered on real student and professional shoots which will inspire you to be innovative and resourceful when you are solving your own filmmaking challenges

Dawn-Dusk Asymmetries in Planetary Plasma Environments Stein Haaland, Andrei Runov, Colin Forsyth, 2017-10-09 Dawn-Dusk Asymmetries in Planetary Plasma Environments Dawn dusk asymmetries are ubiquitous features of the plasma environment of many of the planets in our solar system They occur when a particular process or feature is more pronounced at one side of a planet than the other For example recent observations indicate that Earth's magnetopause is thicker at dawn than at dusk Likewise auroral breakups at Earth are more likely to occur in the pre midnight than post midnight sectors Increasing availability of remotely sensed and in situ measurements of planetary ionospheres magnetospheres and their interfaces to the solar wind have revealed significant and persistent dawn

dusk asymmetries As yet there is no consensus regarding the source of many of these asymmetries nor the physical mechanisms by which they are produced and maintained Volume highlights include A comprehensive and updated overview of current knowledge about dawn dusk asymmetries in the plasma environments of planets in our solar system and the mechanisms behind them Valuable contributions from internationally recognized experts covering both observations simulations and theories discussing all important aspects of dawn dusk asymmetries Space weather effects are caused by processes in space mainly the magnetotail and can be highly localized on ground Knowing where the source i e where dawn dusk location is will allow for a better prediction of where the effects on ground will be most pronounced Covering both observational and theoretical aspects of dawn dusk asymmetries Dawn Dusk Asymmetries in Planetary Plasma Environments will be a valuable resource for academic researchers in space physics planetary science astrophysics physics geophysics and earth science *Micro- to Macro-Scale Dynamics of Earth's Flank Magnetopause* Kyoung-Joo Hwang,Hiroshi Hasegawa,Katariina Nykyri,Takuma Nakamura,Simon Wing,2022-06-03 **Small Scale Spatial and Temporal Patterns in Particles, Plankton, and Other Organisms** Aditya R. decades and our knowledge gain has been incremental with several paradigm changing leaps forward In our solar system such waves occur in the ionospheres and magnetospheres of planets and around our Moon They occur in the solar wind and more recently they have been confirmed in the Sun s atmosphere as well The goal of wave research is to understand their generation their propagation and their interaction with the surrounding plasma Low frequency Waves in Space Plasmas presents a concise and authoritative up to date look on where wave research stands What have we learned in the last decade What are unanswered questions While in the past waves in different astrophysical plasmas have been largely treated in separate books the unique feature of this monograph is that it covers waves in many plasma regions including Waves in geospace including ionosphere and magnetosphere Waves in planetary magnetospheres Waves at the Moon Waves in the solar wind Waves in the solar atmosphere Because of the breadth of topics covered this volume should appeal to a broad community of space scientists and students and it should also be of interest to astronomers astrophysicists who are studying space plasmas beyond our Solar System
