Gender And Science:

Reflections on Gender and Science Evelyn Fox Keller, 1995-01-01 Sexual Visions L. J. Jordanova, 1993 Demonstrates that gender as a metaphor has had an exceptionally vigorous life in the history of biological and medical sciences

Nature's Body Londa L. Schiebinger, 2004 Eighteenth century natural historians created a peculiar and peculiarly durable vision of nature one that embodied the sexual and racial tensions of that era When plants were found to reproduce sexually eighteenth century botanists ascribed to them passionate relations polyandrous marriages and suicidal incest and accounts of steamy plant sex began to infiltrate the botanical literature of the day Naturalists also turned their attention to the great apes just becoming known to eighteenth century Europeans clothing the females in silk vestments and training them to sip tea with the modest demeanor of English matrons while imagining the males of the species fully capable of ravishing women Women and Gender in Science and Technology Londa Schiebinger, 2014 The question of gender in science and technology is pursued by scholars from different disciplines and perspectives historians study the lives of women scientists within the context of institutions that for centuries held women at arm's length sociologists uncover women's access to the means of scientific production biologists scrutinize how science has studied female and male bodies cultural critics explore normative understandings of femininity and masculinity philosophers and historians of science analyse how gender has influenced the content and methods of science and technology Now this new four volume collection from Routledge enables users to make sense of the interlocking pieces of the gender science and technology puzzle the history of women's participation in science and engineering the structure of research institutions and the gendering of human knowledge The volumes bring together important representative publications treating these issues from antiquity to the present and across cultures **The Gender of Science** Janet A. Kourany, 2002 The only book of its kind The Gender of Science inspires readers to critically reflect on science in order to help them become more socially responsible in their dealings with science Provides a diversity of scientific fields and aspects of science Ideal for anyone interested in learning about gender and science the philosophy of science science technology and values and in gender studies women's studies

The Riddle Of Gender Deborah Rudacille, 2005 Combines interviews and personal narratives with scientific research to profile transgenders in contemporary and historical contexts Gender, Science and Mathematics L. H. Parker, L. Rennie, B. Fraser, 2012-12-06 Throughout the Western world the relationship between gender science and mathematics has emerged as critical in a variety of contexts In tertiary institutions the study of gender issues frequently with reference to science and mathematics is of central significance to many disciplines Gender studies are being offered as separate courses or parts of existing courses in preservice and postgraduate teacher education women's studies technology studies and policy studies In addition in the broader context of education at all levels from primary elementary through to higher concerned policy makers and practitioners frequently focus on the interaction of gender science and mathematics in their attempts to reform and

improve education for all students In all of these contexts there is an urgent need for suitable texts both to provide resources for teachers and students and to inform policy makers and practitioners This book has been developed specifically to meet this need It is designed to be used throughout the world in a variety of tertiary courses and by policy makers concerned with activities which interface with the gender science mathematics relationship It provides examples which illustrate vividly the rich field from which practitioners and policy makers in this area now can draw Its particular appeal will stem from its practical approach and creative future perspective the international renown of the authors and the generalisability of the recent research and thinking presented in each of the chapters

Technology: Perspectives from Africa Wawasi Kitetu, 2008-03-15 This sixth volume of the CODESRIA Gender Series is a collection of discourses, perspectives, practices and policies on the role of the female gender in science and technology particularly in the African context. Although widely advocated as the indisputable foundation for political and economic power in the modern world, science and technology remains marked by various layers and dimensions of gender inequality that work to the disadvantage of girls and women. Despite the fact that a lot of awareness has been created and gender issues are now more readily acknowledged by various development initiatives in Africa, participation in science and technology still remains a hurdle as far as girls and women are concerned. A common theme that runs through the book is how feminine identities, ideologies of domesticity and gender stereotypes and the inadequacy or lack of clear policies facilitate the invisibility of women in science and technology. This notwithstanding, women have never ceased devising clever and ingenious ways that would enable them to master nature from the margins. The book provides a window onto the current state of female participation in science and technology in Africa along with an analysis of the historical backgrounds, current educational and professional contexts and prospects for the future. While it is evident that more research needs to be done with more groups in different regions, this volume brings together a rich and inspiring collection of qualitative insights on gender, science and technology in Africa. The CODESRIA Gender Series acknowledges the need to challenge the masculinities underpinning the structures of repression that target women. The series aims to keep alive and nourish African social science research with insightful research and debates that challenge conventional wisdom, structures and ideologies that are narrowly informed by caricatures of gender realities. It strives to showcase the best in African gender research and provide a platform for emerging new talents to flower **Gender, Science and Technology: Perspectives from Africa** Catherine Wawasi Kitetu, 2008
