Gender In Grammar And Cognition:

Gender in Grammar and Cognition Barbara Unterbeck, 2000 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state of the art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by approaching language from an interdisciplinary perspective. TRENDS IN LINGUISTICS considers itself a forum for cutting edge research based on solid empirical data on language in its various manifestations including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing. **Gender in Grammar and Cognition** Barbara Unterbeck, Matti Rissanen, Terttu Nevalainen, Mirja Saari, 2011 Grammatical gender and linguistic complexity II Francesca Di Garbo, Bruno Olsson, Bernhard Wälchli, 2019. The many facets of grammatical gender remain one of the most fruitful areas of linguistic research and pose fascinating questions about the origins and development of complexity in language. The present work is a two volume collection of 13 chapters on the topic of grammatical gender seen through the prism of linguistic complexity. The contributions discuss what counts as complex and or simple in grammatical gender systems whether the distribution of gender systems across the world's languages relates to the language ecology and social history of speech communities. Contributors demonstrate how the complexity of gender systems can be studied synchronically both in individual languages and over large cross linguistic samples and diachronically by exploring how gender systems change over time. Volume two consists of three chapters providing diachronic and typological case studies followed by a final chapter discussing old and new theoretical and empirical challenges in the study of the dynamics of gender complexity. This volume is preceded by volume one which in addition to three chapters on the theoretical foundations of gender complexity contains six chapters on grammatical gender and complexity in individual languages and language families of Africa, New Guinea and South Asia. **Gender Across Languages** Marlis Hellinger, Hadumod Bußmann, 2001-10-09. This is the first of a three volume comprehensive reference work on Gender across Languages which provides systematic descriptions of various categories of gender: grammatical, lexical, referential, social in 30 languages of diverse genetic, typological and socio cultural backgrounds. Among the issues discussed for each language are the following: What are the structural properties of the language that have an impact on the relations between language and gender? What are the consequences for areas such as agreement, pronominalisation and word formation? How is specification of and abstraction from referential gender achieved in a language? Is empirical evidence available for the assumption that masculine/male expressions are interpreted as generics? Can tendencies of variation and change be observed and have alternatives been

proposed for a more equal linguistic treatment of women and men This volume and its follow up volumes will provide the much needed basis for explicitly comparative analyses of gender across languages All chapters are original contributions and follow a common general outline developed by the editors The book contains rich bibliographical and indexical material Languages of Volume 1 Arabic Belizean Creole Eastern Maroon Creole English American New Zealand Australian Hebrew Indonesian Romanian Russian Turkish

The Morphosyntax of Gender Ruth T. Kramer, 2015 This book presents a new cross linguistic analysis of gender and its effects on morphosyntax It addresses questions including the syntactic location of gender features the role of natural gender and the relationship between syntactic gender features and the morphological realization of gender Ruth Kramer argues that gender features are syntactically located on the n head little n which serves to nominalize category neutral roots Those gender features are either interpretable as in the case of natural gender or uninterpretable like the gender of an inanimate noun in Spanish Adopting Distributed Morphology the book lays out how the gender features on n map onto the gender features relevant for morphological exponence The analysis is supported by an in depth case study of Amharic which poses challenges for previous gender analyses and provides clear support for gender on n The proposals generate a typology of two and three gender systems with the various types illustrated using data from a genetically diverse set of languages Finally further evidence for gender being on n is provided from case studies of Somali and Romanian as well as from the relationship between gender and other linguistic phenomena including derived nouns and declension class Overall the book provides one of the first large scale cross linguistically oriented theoretical approaches to the morphosyntax of gender

The Acquisition of Gender Dalila Ayoun, 2022-01-15 Gender as a morphosyntactic feature is arguably an endlessly fascinating linguistic category Corbett 2014 1 One may even say it is among the most puzzling of the grammatical categories Corbett 1991 1 that has raised probing questions from various theoretical and applied perspectives Most languages display semantic and or formal gender systems with various degrees of opacity and complexity and even closely related languages present distinct differences creating difficulties for second language learners The first three chapters of this volume present critical reviews in three different areas gender assignment in mixed noun phrases subtle gender biases and the gender acquisition in child and adult heritage speakers of Spanish while the next six chapters present new empirical evidence in the acquisition of gender by bilingual children adult L2 L3 learners and heritage speakers of various languages such as Italian German Dutch or Mandarin Italian

Studies in Language Variation and Change 2 Catherine Delesse, Elise Louviot, 2018-06-11 This collection of eleven essays traces the complex paths of change taken by the English language in its long history from its Indo European origins to the present day Just like any other language English is a complex system made up of several interconnected sub systems lexical syntactical phonological morphological and all of those sub systems are subject to change resulting in constant shifts and readjustments Additionally more than some other languages English has a history marked by strong upheavals particularly with the influence of Scandinavian and Romance

languages in the Middle Ages The contributions here consider all aspects of that complex history with four of them taking a particular interest in the issues brought about by language contact with French and Latin *Manual of Grammatical Interfaces in Romance* Susann Fischer, Christoph Gabriel, 2016-09-12 Different components of grammar interact in non trivial ways It has been under debate what the actual range of interaction is and how we can most appropriately represent this in grammatical theory The volume provides a general overview of various topics in the linguistics of Romance languages by examining them through the interaction of grammatical components and functions as a state of the art report but at the same time as a manual of Romance languages Classifiers Alexandra Y. Aikhenvald, 2000-03-30 Almost all languages have some grammatical means for the linguistic categorization of nouns Well known systems such as the lexical numeral classifiers of South East Asia on the one hand and the highly grammaticalized gender agreement classes of Indo European languages on the other are the extremes of a continuum They can have a similar semantic basis and one can develop from the other Classifiers come in different morphological forms they can be free nouns clitics or affixes Some languages combine several varieties of classifiers Different types of classifiers show varying correlations with other grammatical categories In addition they differ in their semantics in the way they develop and in the way they become obsolescent and disappear These parameters are the basis for the typology of classifiers presented here This book is almost certainly the most substantial cross linguistic account of classifiers ever published Its range of exemplification includes major and minor languages from every continent several from the author's own fieldwork The work combines original research with innovative analysis and will interest typologists those working in the field of morphosyntactic variation and lexical semantics and exponents of formal theories who wish to explain the range of linguistic diversity found in natural language The Determinants of Diachronic Stability Anne Breitbarth, Miriam Bouzouita, Lieven Danckaert, Melissa Farasyn, 2019-03-20 While much of the literature has focused on explaining diachronic variation and change the fact that sometimes change does not seem to happen has received much less attention The current volume unites ten contributions that look for the determinants of diachronic stability mainly in the areas of morphology and morpho syntax The relevant question is approached from different angles both empirical and theoretical Empirically the contributions deal with the absence of change where one may expect it uncover underlying stability where traditionally diachronic change was postulated and inversely superficial stability that disguises underlying change Determining factors ranging from internal causes to language contact are explored Theoretically the questions of whether stable variation is possible and how it can be modeled are addressed The volume will be of interest to linguists working on the causes of language change and to scholars working on the history of Germanic Romance and Sinitic languages Linguistic Universals and Language Variation Peter Siemund, 2011-06-30 The volume explores the relationship between linguistic universals and language variation Its contributions identify the recurrent patterns and principles behind the complex spectrum of observable variation The volume bridges the gap between cross linguistic variation regional

variation diachronic variation contact induced variation as well as socially conditioned variation Moreover it addresses fundamental methodological and theoretical issues of variation research The volume brings together internationally renowned specialists of their fields while at the same time offering a platform for gifted and highly talented young researchers The authors come from different theoretical backgrounds and through their work illustrate a rich array of scientific methods All authors share a strong belief in empirically founded theoretical work The contributions span a high number of languages and dialects from many parts of the world They are extremely broad in their empirical coverage addressing an impressive selection of grammatical domains
