Advances and Applications of DSMT for Information Fusion (Collected Works. Volume 5) Florentin Smarandache, Jean Dezert, Albena Tchamova, 2023-12-27

This fifth volume on Advances and Applications of DSMT for Information Fusion collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics and is available in open access. The collected contributions of this volume have either been published or presented after disseminating the fourth volume in 2015, available at fs.unm.edu/DSMTbook4.pdf or www.onera.fr/sites/default/files/297_2015_DSMT_Book4.pdf in international conferences, seminars, workshops, and journals, or they are new. The contributions of each part of this volume are chronologically ordered.

First Part of this book presents some theoretical advances on DSMT dealing mainly with modified Proportional Conflict Redistribution Rules (PCR) of combination with degree of intersection coarsening techniques, interval calculus for PCR thanks to set inversion via interval analysis (SIVIA), rough set classifiers, canonical decomposition of dichotomous belief functions, fast PCR fusion, fast inter-criteria analysis with PCR and improved PCR5 and PCR6 rules preserving the quasi-neutrality of quasi-vacuous belief assignment in the fusion of sources of evidence with their Matlab codes. Because more applications of DSMT have emerged in the past years since the apparition of the fourth book of DSMT in 2015, the second part of this volume is about selected applications of DSMT mainly in building change detection, object recognition, quality of data association in tracking, perception in robotics, risk assessment for torrent protection, and multi-criteria decision making, multi-modal image fusion, coarsening techniques, recommender system, levee characterization and assessment, human heading perception, trust assessment, robotics, biometrics, failure detection, GPS systems, inter-criteria analysis, group decision, human activity recognition, storm prediction, data association for autonomous vehicles, identification of maritime vessels, fusion of support vector machines (SVM), Silx, Furtif, RUST code library for information fusion including PCR rules and network for ship classification. Finally, the third part presents interesting contributions related to belief functions in general, published or presented along the years since 2015. These contributions are related with decision making under uncertainty, belief approximations, probability transformations, new distances between belief functions, non-classical multi-criteria decision making problems with belief functions, generalization of Bayes theorem, image processing, data association, entropy and cross entropy measures, fuzzy evidence numbers, negator of belief mass, human activity recognition, information fusion for breast cancer therapy, imbalanced data classification, and hybrid techniques mixing deep learning with belief functions as well.

We want to thank all the contributors of this fifth volume for their research works and their interests in the development of DSMT and the belief functions. We are grateful as well to other colleagues for encouraging us to edit this fifth volume and for sharing with us several ideas and for their questions and comments on DSMT through the years. We thank the International Society of Information Fusion (www.isif.org) for diffusing main research works related to information fusion including DSMT in the international fusion conferences series over the years. Florentin Smarandache is grateful to The University of New Mexico.

U S A that many times partially sponsored him to attend international conferences workshops and seminars on Information Fusion Jean Dezert is grateful to the Department of Information Processing and Systems DTIS of the French Aerospace Lab Office National d Etudes et de Recherches Aérospatiales Palaiseau France for encouraging him to carry on this research and for its financial support Albena Tchamova is first of all grateful to Dr Jean Dezert for the opportunity to be involved during more than 20 years to follow and share his smart and beautiful visions and ideas in the development of the powerful Dezert Smarandache Theory for data fusion She is also grateful to the Institute of Information and Communication Technologies Bulgarian Academy of Sciences for sponsoring her to attend international conferences on Information Fusion

Information Sifeng Liu, Yi Lin, 2006-03-08 Rapid formation and development of new theories of systems science have become an important part of modern science and technology For ample since the 1940s there have appeared systems theory information theory fuzzy mathematics cybernetics dissipative structures synergetics catastrophe theory chaos theory bifurcations ultra circulations dynamics and many other systems theories Grey systems theory is also one of such systems theories that appeared initially in the 1980s When the research of systems science and the method and technology of systems engineering are applied in various traditional disciplines such as management science decision science and various scientific disciplines a whole new group of new results and breakthroughs are obtained Such a historical background has provided the environment and soil for grey systems theory to form and to develop rapidly in the past 20 plus years More specially in 1982 Professor Deng Ju Long published the first research paper in the area of grey systems in the international journal entitled *Systems and Control Letters* published by North Holland Co His paper was titled *Control Problems of Grey Systems*

The publication of this paper signalled the birth of grey systems theory after many years of effective research of the founding father. This new theory soon caught the attention of the international academic community and practitioners of science. Many well known scholars such as Chinese academicians Qian Xueshen, Song Jian and Zhang Zhongjun, Professor Roger W

Systems Science and Cybernetics - Volume II Francisco Parra-Luna, 2009-10-30. The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects. This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects, advances in the theories on their inter relations, the enormous computational capacity provided by IT hardware and software, and the critical revisiting of subject object interaction. Not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale. The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic. This subject entry is subdivided into four sections. The first, an introduction to systemic theories, addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic, entropic, axiological and ethical problems deriving from a general systemic cybernetic conceit. Hence the focus in this section is on the historic and philosophical aspects of the subject. Moreover it may be asserted today that beyond a shadow of a doubt, problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable. Reaching such a perspective requires taking at least the following well known steps: a statement of the problem from the determinant variables or phenomena; b adoption of theoretical models showing the interrelationships among such variables; c use of the maximum amount of wherever possible quantitative information available on each; d placement of the set of variables in an environment that inevitably pre determines the problem. That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades. The articles in the second section

deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations. Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory, the design of ad hoc strategies and methodologies, the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches, cross disciplinary integration and suitable methods for broaching psychological, cultural and socio political dynamisms. The third section is devoted to cybernetics in the present dual meaning of the term: on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed. Known as second order cybernetics, this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty, complexity and diversity. Finally, the fourth section centres around artificial and computational intelligence, addressing sub themes such as neural networks, the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence.

Cost-Benefit Analysis and the Theory of Fuzzy Decisions Kofi Kissi Dompere, 2013-03-20. Criticism is the habitus of the contemplative intellect whereby we try to recognize with probability the genuine quality of a literary work by using appropriate aids and rules. In so doing certain general and particular points must be considered. The art of interpretation or hermeneutics is the habitus of the contemplative intellect of probing into the sense of somewhat special text by using logical rules and suitable means. Note: Hermeneutics differs from criticism as the part does from the whole. Antonius Gvilielmus Amo Afer 1727. There is no such thing as absolute truth. At best it is a subjective criterion but one based upon valuation. Unfortunately too many people place their fate in the hands of subjective without properly evaluating it. Arnold A Kaufmann and Madan M Gupta. The development of cost benefit analysis and the theory of fuzzy decision was divided into two inter dependent structures of identification and measurement theory on one hand and fuzzy value theory on the other. Each of them has sub theories that constitute a complete logical system.

An Introduction to Fuzzy Logic Applications in Intelligent Systems Ronald R. Yager, Lotfi A.

Zadeh, 2012-12-06. An Introduction to Fuzzy Logic Applications in Intelligent Systems consists of a collection of chapters written by leading experts in the field of fuzzy sets. Each chapter addresses an area where fuzzy sets have been applied to situations broadly related to intelligent systems. The volume provides an introduction to and an overview of recent applications of fuzzy sets to various areas of intelligent systems. Its purpose is to provide information and easy access for people new to the field. The book also serves as an excellent reference for researchers in the field and those working in the

specifics of systems development People in computer science especially those in artificial intelligence knowledge based systems and intelligent systems will find this to be a valuable sourcebook Engineers particularly control engineers will also have a strong interest in this book Finally the book will be of interest to researchers working in decision support systems operations research decision theory management science and applied mathematics An Introduction to Fuzzy Logic Applications in Intelligent Systems may also be used as an introductory text and as such it is tutorial in nature **FCC Record** United States.
