Learning Memory And Conceptual Processes Series In Psychology:

Learning, Memory, and Conceptual Processes Walter Kintsch, 1970 **National Library of Medicine Current Catalog**
National Library of Medicine (U.S.), 1970 First multi year cumulation covers six years 1965-70 **Science of Memory**
Henry L. Roediger III, Yadin Dudai, Susan M. Fitzpatrick, 2007-04-26 Scientists currently study memory from many different perspectives: neurobiological, ethological, animal conditioning, cognitive, behavioral, neuroscience, social and cultural. The aim of this book is to help initiate a new science of memory by bringing these perspectives together to create a unified understanding of the topic. The book began with a conference where leading practitioners from all these major approaches met to analyze and discuss 16 concepts that are crucial to our understanding of memory. Each of these 16 concepts is addressed in a section of the book and in the 66 succinct chapters that fill these sections a leading researcher addresses the section's concept by clearly stating his or her position on it, elucidating how it is used and discussing how it should be used in future research. For some concepts there is general agreement among practitioners from different fields and levels of analysis, but for others there is general disagreement and much controversy. A final chapter in each section, also written by a leading researcher, integrates the various viewpoints offered on the section's concept, then draws conclusions about the concept. This groundbreaking volume will be an indispensable reference for all the students and researchers who will build upon the foundation it provides for the new science of memory. *The Development of Arithmetic Concepts and Skills*
Arthur J. Baroody, Ann Dowker, 2013-06-17 This volume focuses on two related questions that are central to both the psychology of mathematical thinking and learning and to the improvement of mathematics education: What is the nature of arithmetic expertise? How can instruction best promote it? Contributors from a variety of specialties, including cognitive, developmental, educational, and neurological psychology, mathematics education, and special education, offer theoretical perspectives and much needed empirical evidence about these issues. As reported in this volume, both theory and research indicate that the nature of arithmetic expertise and how to best promote it are far more complex than conventional wisdom and many scholars past and present have suggested. The results of psychological, educational, and clinical studies using a wide range of arithmetic tasks and populations, including normally and atypically developing children, non-injured and brain-injured adults, and savants, all point to the same conclusion: The heart of arithmetic fluency, in general, and the flexible and creative use of strategies, in particular, is what is termed adaptive expertise: meaningful or conceptually based knowledge. The construction of adaptive expertise in mathematics is for the first time examined across various arithmetic topics and age groups. This book will be an invaluable resource for researchers and graduate students interested in mathematical cognition and learning, including mathematics educators, developmental and educational psychologists, and neuropsychologists; educators, including teachers, curriculum supervisors, and school administrators; and others interested in improving arithmetic instruction, including officials in national and local education departments, the media, and parents. Human Memory Mary

B. Howes, Geoffrey O'Shea, 2013-12-21 While memory research has recently focused on brain images and neurological underpinnings of transmitters Human Memory A Constructivist View assesses how our individual identity affects what we remember why and how This book brings memory back to the constructivist questions of how all the experiences of an individual up to the point of new memory input help to determine what that person pays attention to how that information is interpreted and how all that ultimately affects what goes into memory and how it is stored This also affects what can be recalled later and what kind of memory distortions are likely to occur The authors describe constructionist theories of memory what they predict how this is borne out in research findings presenting everyday life examples for better understanding of the material and interest Intended for memory researchers and graduate level courses this book is an excellent summary of human memory research from the constructivist perspective Defines constructivist theory in memory research Assesses research findings relative to constructivist predictions Identifies how personal experience dictates attention interpretation and storage Integrates constructivist based findings with cognitive neuroscience

Prospective Memory Maria A. Brandimonte, Gilles O. Einstein, Mark A. McDaniel, 2014-02-25 Devoted exclusively to prospective memory this volume organizes the research and thoughts of the important contributors to the field in one comprehensive resource The chapter authors not only focus on their own work but also review other research areas and address those where the methods and theories from the retrospective memory literature are useful and where they fall short Each section is followed by at least one commentary written by a prominent scholar in the field of memory The commentators present critical analyses of the chapters note ideas that they found particularly exciting and use these ideas as a foundation on which to elaborate their own views of prospective memory This volume will stimulate the thinking of active prospective memory researchers provide a coherent organization of the area for the increasing number of people who are interested in prospective memory but who are not yet actively conducting research in the area and serve as a book of readings for upper division seminars

Memory, Attention, and Aging Fergus Craik, 2016-10-26 Memory Attention and Aging is a collection of some of the most influential journal articles previously published by Fergus Craik and his collaborators with new introductory material unifying the research of this noted cognitive psychologist The reprinted articles are grouped into six sections reflecting Craik's various research interests across his career The first section on short term memory focuses on research concerns Craik uncovered in the 1970s but are still valid today They comprise theoretical suggestions and data on the nature of STM including the notion that working memory may be defined as attention paid to features of items held in conscious awareness The second section on levels of processing contains the very influential articles by Craik Lockhart and by Craik Tulving on memory research in addition to a later article in which Craik gives a critical account of the LOP work Craik's third interest is in cognitive aging The section contains two articles from the 1980s in which Craik lays out his ideas on age related changes in memory plus a more recent article addressing lifespan changes in cognition The fourth section on

attention and memory has two articles that report on the effects of divided attention on subsequent memory and differences between implicit and explicit memory processes The fifth section on cognitive neuroscience includes an early PET study probing neural correlates of LOP and a study searching for the neural correlates of the self concept Finally the sixth section contains an article on bilingualism that explores age related differences in executive functions as a consequence of bilingualism and a study showing that bilingualism postpones the onset of Alzheimer s disease Grouping the most highly cited and groundbreaking articles of Fergus Craik in one volume this book will be of interest to a wide spectrum of students and professional researchers

Human Memory Gabriel A. Radvansky, 2021-03-30 Human Memory 4th edition provides a comprehensive overview of research and theory on human memory Written in an engaging style the book is divided into three sections providing an accessible introduction to the application and assessment of memory theory Beginning with the history of memory the first section explores basic methodology and neuroscience The second section examines the key topics of memory such as the sensory registers mechanisms of forgetting and short term nondeclarative episodic and semantic memory The third section focuses on specialist topics such as amnesia memory for space and time autobiographical memory memory and reality memory and the law of metamemory and formal models of memory Instructors could pick and chose which of these chapters best fit the goals of their course New to this edition More prominent discussion of neuroscience findings Coverage of a wider range of neuroscientific techniques Greater emphasis on memory changes over time New explanation of how to calculate a wider range of signal detection measures Additional content on a wide range of topics including the mirror effect sleep related memory processes vicarious autobiographical memories inter generational memory transmission the impact of lying on memory eyewitness collaboration and aging and spatial memory Expanded coverage of areas including theories of hypermnnesia chunking serial order memory prospective memory threshold models and eyewitness line up identification Updated companion resources including PowerPoint slides and exam questions The book highlights the application of memory theory and findings to everyday experience presents in depth explorations of studies and provides opportunities for students to explore the assessment of memory in more laboratory based settings Packed full of student friendly pedagogy including study questions Stop and Review and Try it Out sections Study in Depth text boxes and more Human Memory 4th edition is an essential companion for all students of human memory
