

## Chapter five Advanced Techniques

very often, it's not what you burn so much as what you burn that counts. Learning what, when and how much is something you will be discovering through experience as you continue in this medium. More often than not, I have seen beginners over-burn their pyrographs and attempt. The following tips and techniques will give you more hours of work and get you past the obstacles and hurdles you might have experienced in the past. Whenever possible, avoid using burn lines to outline your subjects. This ap-

plies more to natural subjects than man-made or stylized ones. There will always be exceptions, but you will learn from experience when to use burn lines, this applies to fur, hair, feathers, etc. For example, light-reflecting edges of objects, which are white or light in color. Reflecting light is not do this in your burning so it will look natural and lifelike. In the next chapter, entitled "Finishing," you will find some tips to aid you in making

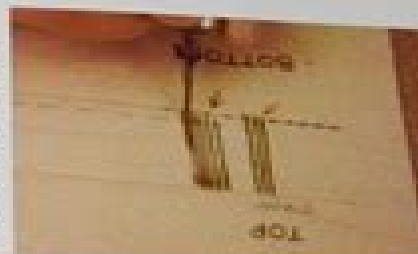

You can achieve a much more natural effect if you avoid using solid outlines when you burn your images. See what a difference it makes in the racoon and the feather shown here.

### TURNING TO A LINE

There will be occasions when your burn mark extends past a point or line where you intended to stop. This happens frequently when burning or in depicting corners where a corner is required. The reason is usually in the final portion of the burn, by holding your pen at a higher angle which makes the pen tip contact. If the problem continues, try a new pen and try in the same fashion.

When burning, if you place your pen upside down and finish your line by turning the pen back to the original position, you will avoid these little mistakes which will go a long way to improving your work.

To avoid this, stop a little bit before your bottom line is reached in a second line, to let me know when I am done.

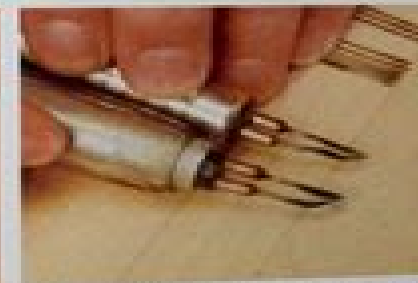

Many pyrographers accidentally over-extend their lines. Here, the tip of the pen stopped on the dashed line, exactly where I wanted the line to end, but when I felt the pen I saw that the line had went too far.

Then turn the piece around, and start with your pen by bottom. Use short burns to connect the features with the line.

Now you can see why the head of the pen went too far.

You may find that using a pen with a more acute point makes this problem.

and serves the purpose for which I practice the art on the weekends i.e. to unwind from my regular job. The best part is this art has got something for everyone. If you are a beginner, get a scrap wood and use your existing soldering pen to start the artwork. Later you can shift to a proper burner. If you like calligraphy, you can burn letters. A friend of mine is a space enthusiast and he is making space ships. With experience, you master the art of shading which gives depth to the artwork. Drawing hair, fur, or skin of an animal takes time, but it is worthwhile to put the effort. What I love about this skill is that it makes one of the best presents for the loved ones. As the art ages with time, it leaves a memorable piece of history to your loved ones.

**About the Book:** It is not a traditional book, but an effort from your friend to present the experience and discussions while learning this art. In the last few years, I have made many wood and leather burning projects, over the years, and interacted with fellow crafters. This book is the crux of all those learning and experiences over the years. This book provides a minimalistic approach to the information required to start your first Pyrography project. It covers Introduction to the art, The history and steps involved, Tools, All about tools involved, Detailed instructions on using Wood Burner including different tips, Designing, Tracing and Shading. I must say the shading part only comes by practicing Coloring, Polishing and Finishing. Safety Instructions: Very important and highlighted all through the book. Step by Step instructions on 10 starter projects with pictures. Frequently Asked Questions: All the ones I could remember and not covered in other chapters. Sample Designs: Mandala, Tiger, Dragon, and more. I still remember the initial doubts I had and the tips which helped me. This book is for people who are in their first lap of Pyrography journey and want to have a holistic idea of processes, tools, and need help in their initial projects. I have included photographs of realistic projects of beginners explaining the process and standard operating procedure while starting. So what are you waiting for?
