Learning from Failure: The Systems Approach. By Joyce Fortune and Geoff Peters. Wiley, Chichester, UK, 1993.

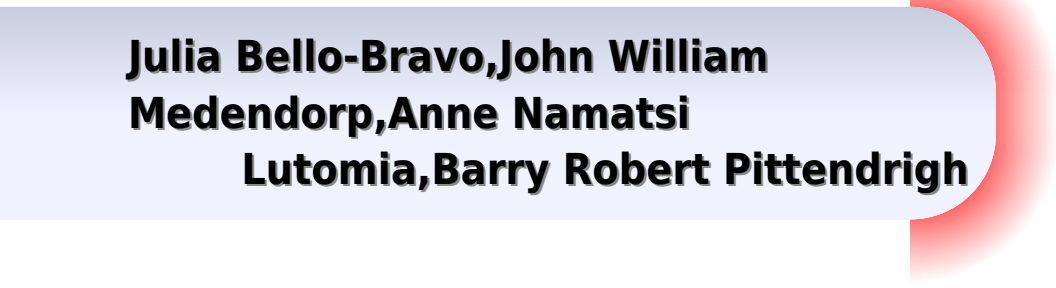

Overall, this is an excellent book. It presents a method which has been in gestation for many years and has emerged from courses related to systems and failures conducted by the Open University. The types of failures considered are very general, from disasters like those associated with Bhopal or Piper Alpha to financial or data recording systems. The authors criticize the "culture of blame", as well as an absence of "robust methods", as reasons for an apparent inability to learn from past failures. Seeing failures as products of systems is regarded as a way of helping to counter this, and the authors claim that they are helping to provide robust methods for understanding how failures come about and attempting to draw non trivial lessons for the future. However, a contributory factor in a failure to learn from past disasters is also the presence, very often, of powerful interests, e.g. economic or political, although the authors do not mention this. However, this does not invalidate their very valuable contribution: to provide a method and a set of practical techniques for analyzing a failure and drawing lessons.

One surprising aspect of the book is its sub-title: "The Systems Approach". What is surprising is the use of the definite article rather than the indefinite. There is not only one "systems approach". However, it is rightly emphasised in the book that systems are not objective but are conceived by individuals; in this case, the analyst. This links to the concept of *Weltanschauung*, the German word for "world-view" which has become a technical term within systems circles, intended to express the fact that different people have different sets of values, interests and perceptions. Different "actors" within a system have different *Weltanschauungen*. It is implicit, therefore, that there is not just one possible "systems approach", and I imagine that the authors would agree with this. Perhaps the sub-title reflects an excess of zeal on the part of the publisher or an uncharacteristic oversight on the part of the authors.

This does, however, lead to a serious point in that the method described in the book does not explicitly draw out the

Latecomer Development Banji Oyelaran-Oyeyinka,Padmashree Gehl Sampath,2009-12-16 The most important issue for development centres on the debate about the centrality of knowledge technology and innovation to the process of economic development While this much is broadly agreed what is at issue is the precise mechanics of overcoming economic development challenges in different contexts At the heart of it all is about how economies at different levels deploy the unending streams of information and knowledge to developmental ends In time the notion of income convergence between the poorer South and the wealthy North has proved a mirage while a new economic divide has in fact occurred within the South itself and as well between regions and within regions The debate relating to latecomers is thus framed in discussions about regions and countries that arrive late to mastering industrialization in achieving economic prosperity through the use of knowledge In other words a new divide has emerged among the latecomers themselves and with it greater conceptual complexity in the ways of our understanding of the divergent ways of economic development We have thus separated fast followers and new late comers This book enters this debate acutely aware of the complexity of this process The authors argue that economic development is largely driven by innovation concentrating on the dynamics of process product and organizational changes and how they are embedded within specific and varied contextual institutions

System of Human Activity Systems Takafumi Nakamura,2023-11-30 This book has unique features that set it apart from conventional books on the prevention of system failures in that it provides a method that views human activities from a meta methodological perspective based upon an inter disciplinary understanding of human activities With these characteristics the book also proposes a common methodological basis to apply to various problems surrounding society today such as an aging social infrastructure the safety of food medicine and public transportation and the creation of sustainable electricity and cybersecurity Furthermore since the failure of human activities is expressed in a three dimensional space and the topological metrics are implemented the failure trajectories can be quantitatively monitored in time series to take effective preventive measures Considering the implementation of the topological metrics the causes of each failure are classified into two dimensions of the degree of coupling between system elements and the interaction

between the target system and the external environment Owing to the nature of the introduction of topological metrics all individual and diverse systems can share general topological metrics Consequently understanding various failures over cross industries is possible with the use of common meta systemic language and mutual learning between different industries and the solution of social problems can be effectively achieved A system of system failures SOSF proposed and confirmed the effectiveness of this meta methodology for information and communication technologies ICT systems and the SOSF is extended to human activity systems SOHAS system of human activity systems as a whole Therefore the SOHAS becomes an academic foundation for theoretical research on meta methodology and it has an impact on practitioners to prevent system failures by accumulating knowledge of failures and learning from other industries *The International Handbook on Innovation* Larisa V Shavinina,2003-10-16 The breadth of this work will allow the reader to acquire a comprehensive and panoramic picture of the nature of innovation within a single handbook Gender, Digitalization, and Resilience in International Development Julia Bello-Bravo,John William Medendorp,Anne Namatsi Lutomia,Barry Robert Pittendrigh,2023-09-07 This book explores the intersection of gender digitalization and resilience in international development Building resilience is increasingly seen as crucial when planning and implementing development programmes enabling communities to mitigate adapt to and recover from shocks and stresses in a manner that reduces chronic vulnerability and facilitates inclusive growth Gender plays a crucial role in the resilience of development systems as the exclusion of women from participation can make communities more vulnerable to economic shocks perpetuating and even worsening current levels of poverty instability and insecurity Drawing on meta data from across the world as well as specific case studies from Ghana Kenya Burkina Faso and Mozambique this book reflects on these intersections and the potential of digitalization as a democratizing tool for improving the access of women and other marginalized groups to information vital for their participation in the process of development By outlining the importance of digitalization for addressing gender imbalances this book draws the evidentiary lines between the role of digitalization for women and resilience as a whole This book will be of interest to development practitioners and policy makers as well as researchers with specialisms in gender inclusion resilience digitalization and international development **Critical Reflections on Information Systems: A Systemic Approach** Cano, Jeimy J.,2002-07-01 While implementing IS and IT in support of their business strategies companies are looking for ways to bridge the gap between their competitive position and technological investment including ways to use this investment to the advantage of the organization This book faces this challenge by offering ways to incorporate IT into such organizations while also successfully giving the company an edge over its competitors **The Wiley Blackwell Handbook of the Psychology of Occupational Safety and Workplace Health** Sharon Clarke,Tahira M.
