enterprises through its active engagement in these areas      *Piercing the Horizon* Sunny Tsiao, 2017-09-15 We all know the names Grissom Armstrong Cernan legends of the space age whose names resonate with people around the world and whose deeds need no introduction We know less about the men who led the organization that planned and began the US exploration of space the National Aeronautics and Space Administration NASA Thomas O Paine grew up an ordinary boy in northern California during the Great Depression of the 1930s He would go on to serve as NASA's third administrator leading the space agency through the first historic missions that sent astronauts on voyages away from Earth On his watch seven Apollo flights orbited our planet and five reached our moon From those missions came the first of twelve men to walk on the moon Years later in 1985 the Reagan administration would call on Paine again to chair the nation's first ever National Commission on Space The Paine Commission Report of 1986 challenged twenty first century America to lead the exploration and development of the space frontier advancing science technology and enterprise and building institutions and systems that make accessible vast new resources and support human settlements beyond Earth orbit from the highlands of the Moon to the plains of Mars In *Piercing the Horizon* Sunny Tsiao masterfully delivers new insights into the behind the scenes drama of the space race Tsiao examines how Paine's days as a World War II submariner fighting in the Pacific shaped his vision for the future of humankind in space The book tells how Paine honed his skills as a pioneering materials engineer at the fabled postwar General Electric Company in the 1950s to his dealings inside the halls of NASA and with Johnson Nixon and later the Reagan and Bush administrations As robotic missions begin leaving the earth Tsiao invites the reader to take another look at the plans that Paine articulated regarding how America could have had humans on Mars by the year 2000 as the first step to the exploration of deep space *Piercing the Horizon* provides provocative context to current conversations on the case for reaching Mars settling our solar system and continuing the exploration of space      Smithsonian: Spaceflight, 2nd Edition Giles Sparrow, 2019-04-02 This compelling story of exploration charts and celebrates humankind in space from Sputnik's launch in 1957 through the Apollo Moon landings and the International Space Station to future missions to Mars and beyond Spaceflight chronicles how in the half century that followed Sputnik the world was revolutionized by space travel and exploration The opening up of Earth's orbit to satellites led to a revolution in communications monitoring of the environment and materials science For the human imagination the impact has been even greater the voyages of robotic space probes have transformed our view of the Solar System while Earth orbiting satellites and missions to the Moon have forever changed our view of ourselves This book is a celebration of human ingenuity and imagination From the work of pioneers like Wernher von Braun Yuri Gagarin and Neil Armstrong to the triumphs and tragedies that followed it reveals the people science and technology that have propelled us into the Space Age      **The Mystery of the Seven Spheres** Giovanni F. Bignami, 2015-06-13 In this book Giovanni Bignami the outstanding Italian scientist and astronomer takes the reader on a journey through the seven spheres from our own planet to neighboring stars The author offers a gripping account of the

evolution of Homo Sapiens to the stage where our species is developing capabilities in the form of new energy propulsion systems that will enable us to conquer space The reader will learn how we first expanded our activities to reach beyond our planet to the Moon and how nuclear energy nuclear fusion and matter antimatter annihilation will enable us to extend our exploration After Mars and Jupiter we shall finally reach the nearest stars which we now know are surrounded by numerous planets some of which are bound to be habitable The book includes enticing descriptions of such newly discovered planets and also brings alive key historical characters in our story such as Jules Verne and Werner von Braun *Deep Space Propulsion* K. F. Long, 2011-11-25 The technology of the next few decades could possibly allow us to explore with robotic probes the closest stars outside our Solar System and maybe even observe some of the recently discovered planets circling these stars This book looks at the reasons for exploring our stellar neighbors and at the technologies we are developing to build space probes that can traverse the enormous distances between the stars In order to reach the nearest stars we must first develop a propulsion technology that would take our robotic probes there in a reasonable time Such propulsion technology has radically different requirements from conventional chemical rockets because of the enormous distances that must be crossed Surprisingly many propulsion schemes for interstellar travel have been suggested and await only practical engineering solutions and the political will to make them a reality This is a result of the tremendous advances in astrophysics that have been made in recent decades and the perseverance and imagination of tenacious theoretical physicists This book explores these different propulsion schemes all based on current physics and the challenges they present to physicists engineers and space exploration entrepreneurs This book will be helpful to anyone who really wants to understand the principles behind and likely future course of interstellar travel and who wants to recognize the distinctions between pure fantasy such as Star Trek's warp drive and methods that are grounded in real physics and offer practical technological solutions for exploring the stars in the decades to come **A View from the Stars** Cixin Liu, 2024-04-02 From the author of the New York Times bestselling Three Body Problem series now a Netflix Original series A View from the Stars is a new collection of short fiction and nonfiction pieces A VIEW FROM THE STARS features a range of short works from the past three decades of New York Times bestselling author Cixin Liu's prolific career putting his nonfiction essays and short stories side by side for the first time This collection includes essays and interviews that shed light on Liu's experiences as a reader writer and lover of science fiction throughout his life as well as short fiction that gives glimpses into the evolution of his imaginative voice over the years A vital collection down to earth but unafraid to ask big questions Publishers Weekly The Three Body Problem Series The Three Body Problem The Dark Forest Death's End Other Books by Cixin Liu Ball Lightning Supernova Era To Hold Up the Sky The Wandering Earth A View from the Stars At the Publisher's request this title is being sold without Digital Rights Management Software DRM applied **Picture This!** Michael Carroll, 2016-03-31 Astronomical concepts can be truly hard to comprehend especially those of planetary sizes and distances from Earth and from each other

These concepts are made more comprehensible by the group of illustrations in this book which put scale extraterrestrial objects side by side with objects on Earth we can more easily relate to For example study the pictures of Earth floating above Jupiter s Great Red Spot and the asteroid Itokawa resting beside Toronto s CN Tower These mind bending images bring things better into perspective and will help you understand the size and scale of our Solar System In later chapters you will be told how close the visionaries of the past came to guessing what today s explorers would find Astronomer painter Lucien Rudaux s masterpieces of Mars dust storms anticipated Viking and Mars rover images by nearly a century Space artist Ludek Pesek envisioned astronauts setting up camp on the lunar surface in scenes hauntingly similar to photos taken by Apollo astronauts decades later But the real benefit of this work is in better grasping the nature of our universe how big it is now large it is and how we fit into it

**olam he-zeh v'olam ha-ba** Leonard J. Greenspoon,2017-09-15 Dining on Leviathan Discoursing with Socrates Debating the nature of existence in the afterlife These are among the topics authors address in this wide ranging account of how Jews have conceptualized the world to come and structured their lives in this world accordingly Some authorities portrayed the afterlife as an endless round of feasting and drinking of chazerie that would put the fanciest Las Vegas buffets to shame There were visionaries who mapped out otherworldly climes populated by monstrous creatures Others decidedly more staid saw the world to come as a location where neither food nor wine would be consumed instead it would offer the opportunity to bring moral certitude to questionable practices that could not be eradicated in this world More down to earth are comparisons between Rabbi Akiva and Socrates and analyses of influential thinkers like Moses Mendelssohn and Emmanuel Levinas And more practical are discussions of how concepts of the afterlife serve to determine mourning practices or more broadly how humans should fashion their lives in the here and now The chronological range of these chapters also is impressive The earliest documents discussed are from Apocryphal literature including apocalypses that were composed from 400 BCE to 200 CE There are creative analyses of rabbinic material and documents from the medieval period through the twentieth century Evolving ritual and liturgical practices bring readers up to the early twenty first century Each of the thirteen authors whose works are brought together in this volume shows historical cultural and religious sensitivity both to the unique features of these differing manifestations and to the elements that unite them For the readers of this volume which is equally rewarding for general audiences and for specialists the result is a carefully nuanced creatively balanced exploration of the breadth of Jewish thought and practice concerning some of the most profound and perplexing issues humans face
