What is genetics?

- "Genetics is the study of heredity, the process in which a parent passes specific genes onto their children.
- Children inherit their biological parent's genes expressing specific traits, such as physical characteristics, natural talents, and genetic disorders.

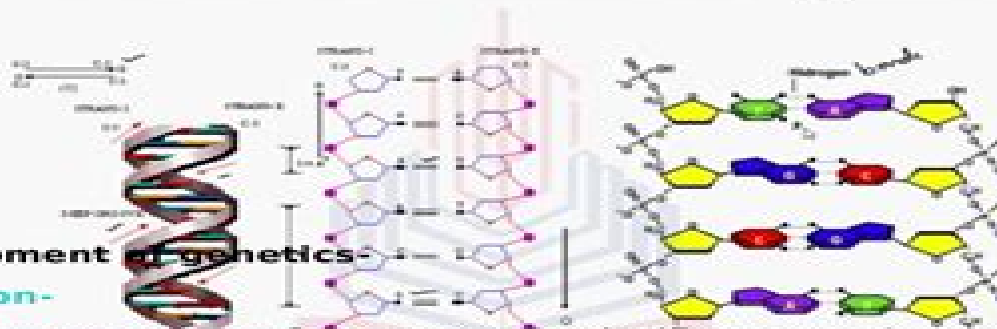

Transmission Genetics:

- How traits are passed down from generation to generation.
- Transmission of genes and the phenotypes which come from those genes
- The phenotype determines how the individual interacts with the world, and the **phenotype** is subject to natural selection.

Watson-Crick Model of DNA

- Two helical strands twisted around each other in a double helix
- Each strand contains a chain of repeating units called nucleotides
- Each nucleotide contains a sugar, a phosphate group, and a base.
