Philosophy of Medicine R. Paul Thompson, Ross Upshur, 2017-08-04 What kind of knowledge is medical knowledge Can medicine be explained scientifically Is disease a scientific concept or do explanations of disease depend on values What is evidence based medicine Are advances in neuroscience bringing us closer to a scientific understanding of the mind The nature of medicine raises fundamental questions about explanation causation knowledge and ontology questions that are central to philosophy as well as medicine This book introduces the fundamental issues in philosophy of medicine for those coming to the subject for the first time including understanding the physician patient relationship the phenomenology of the medical encounter Models and theories in biology and medicine what role do theories play in medicine Are they similar to scientific theories Randomised controlled trials can scientific experiments be replicated in clinical medicine What are the philosophical criticisms levelled at RCTs The concept of evidence in medical research what do we mean by evidence based medicine Should all medicine be based on evidence Causation in medicine What do advances in neuroscience reveal about the relationship between mind and body Defining health and disease are explanations of disease objective or do they depend on values Evolutionary medicine what is the role of evolutionary biology in understanding medicine Is it relevant Extensive use of empirical examples and case studies are included throughout including debates about smoking and cancer the use of placebos in randomised controlled trials controversies about PSA testing and research into the causes of HIV This is an indispensable introduction to those teaching philosophy of medicine and philosophy of science

Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials John O'Quigley, Alexia Iasonos, Björn Bornkamp, 2017-04-27 Handbook of Methods for Designing Monitoring and Analyzing Dose Finding Trials gives a thorough presentation of state of the art methods for early phase clinical trials The methodology of clinical trials has advanced greatly over the last 20 years and arguably nowhere greater than that of early phase studies The need to accelerate drug development in a rapidly evolving context of targeted therapies immunotherapy combination treatments and complex group structures has provided the stimulus to these advances Typically we deal with very small samples sequential methods that need to be efficient while at the same time adhering to ethical principles due to the involvement of human subjects Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space Bayesian methods play an important part in overcoming these difficulties but nonetheless require special consideration in this particular context The purpose of this handbook is to provide an expanded summary of the field as it stands and also through discussion provide insights into the thinking of leaders in the

field as to the potential developments of the years ahead With this goal in mind we present An introduction to the field for graduate students and novices A basis for more established researchers from which to build A collection of material for an advanced course in early phase clinical trials A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose finding experiments An extensive guide for the multiple comparison and modeling MCP Mod dose finding approach adaptive two stage designs for dose finding as well as dose time response models and multiple testing in the context of confirmatory dose finding studies John O Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics University Pierre and Marie Curie in Paris France He is author of Proportional Hazards Regression and has published extensively in the field of dose finding Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York She has over one hundred publications in the leading statistical and clinical journals on the methodology and design of early phase clinical trials Dr Iasonos has wide experience in the actual implementation of model based early phase trials and has given courses in scientific meetings internationally Bj rn Bornkamp is a statistical methodologist at Novartis in Basel Switzerland researching and implementing dose finding designs in Phase II clinical trials He is one of the co developers of the MCP Mod methodology for dose finding and main author of the DoseFinding R package He has published numerous papers on dose finding nonlinear models and Bayesian statistics and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry Singapore National Bibliography ,1989 *Advances in Medical Physics and Healthcare Engineering* Moumita Mukherjee,J.K. Mandal,Siddhartha Bhattacharyya,Christian Huck,Satarupa Biswas,2021-06-17 This book presents research advances in the theory of medical physics and its application in various sectors of biomedical engineering It gathers best selected research papers presented at International Conference on Advances in Medical Physics and Healthcare Engineering AMPHE 2020 organized by the Department of Physics in collaboration with the School of Engineering and Technology Adamas University Kolkata India The theme of the book is interdisciplinary in nature it interests students researchers and faculty members from biomedical engineering biotechnology medical physics life sciences material science and also from electrical electronics and mechanical engineering backgrounds nurturing applications in biomedical domain
