Lectures Of The Environmental And Resource Economics:

Lecture Notes on Resource and Environmental Economics Anthony C. Fisher, 2020-08-24 This book based on lectures on natural and environmental resource economics offers a nontechnical exposition of the modern theory of sustainability in the presence of resource scarcity It applies an alternative take on environmental economics focusing on the economics of the natural environment including development computation and potential empirical importance of the concept of option value as opposed to the standard treatment of the economics of pollution control The approach throughout is primarily conceptual and theoretical though empirical estimation and results are sometimes noted Mathematics ranging from elementary calculus to more formal dynamic optimization is used especially in the early chapters on the optimal management of exhaustible and renewable resources but results are always given an economic interpretation Diagrams and numerical examples are also used extensively The first chapter introduces the classical economists as the first resource economists in their discussion of the implications of a limited natural resource base agricultural land for the evolution of the wider economy A later chapter returns to the same concerns along with others stimulated by the energy and environmental crises of the 1970s and beyond One section considers alternative measures of resource scarcity and empirical findings on their behavior over time Another introduces the modern concept of sustainability with an intuitive development of the analytics A chapter on the dynamics of environmental management motivates the concept of option value shows how to compute it then demonstrates its importance in an illustrative empirical example The closing chapter on climate change first projects future changes and potential catastrophic impacts then discusses the policy relevance of both option value and discounting for the very long run This book is intended for resource and environmental economists and can be read by interested graduate and advanced undergraduate students in the field as well

Lecture Notes In International Trade Theory: Classical Trade And Applications Larry S Karp, 2021-12-08. Lecture Notes in International Trade Theory covers classical international trade models including the Ricardian, Ricardo, Viner, and Heckscher-Ohlin-Samuelson models. The course is designed for M.Sc. and first-year PhD students. It relies on both graphical and analytic methods, requiring only intermediate microeconomics and a solid grounding in calculus. The material emphasizes second-best settings where markets are imperfect. The goal is to equip students with a good enough understanding of open economy general equilibrium relations that they understand how distortions ripple across different markets, e.g., commodity and factor markets. The Author applies these ideas to environmental and natural resource problems, including pollution leakage where pollution reductions in one country are offset by trading partners' increased pollution and imperfect property rights. Other applications include the general equilibrium effects of commodity and trade taxes, international transfers, the transfer problem, minimum wage constraints, and immiserizing growth. The Author assumes that students have some experience in formulating and answering comparative statics questions in an optimization setting. Building on these skills and developing the idea of stability in an equilibrium setting, the Marshall-Lerner condition, students learn how to formulate and answer comparative static questions in trade models.

Environmental and Natural Resources Economics Steven C. Hackett, 2010-12-23. Extensively revised and updated, this popular text presents an accessible yet rigorous treatment of environmental and natural resources economics, including climate change and the economics of sustainability. Completely revised and updated, the fourth edition now includes new figures and tables, definitions to assist the reader, and updated policy information. New advances in the science, economics, and policy approaches to climate change have been integrated into essentially all new chapters on incentive regulation and global climate change. This innovative textbook integrates economics with science and public policy in a balanced and accessible way that will be appreciated by students from disciplines ranging from economics and natural resources management to environmental

studies and energy policy *Core Economics with video lecture for Class 12* S. K. Agarwala, Goyal Brothers Prakashan, 2021-04-01 The present thoroughly revised and updated edition of Core Economics with Video Lectures is strictly according to the latest syllabus prescribed by the CBSE New Delhi of Class XII As in the previous editions I have kept the treatment as simple as possible and confined the scope of each topic to the requirement of the syllabus The treatment has been supplemented by the real life examples and numerical illustrations to enhance the understanding of the subject This book is an outcome of my interaction with a large number of teachers in the Orientation Programmes organised by the CBSE and KVS in various parts of India and by School Associations in UAE and Kuwait I have taken care of the suggestions and observations made by the teachers My sincere thanks to them Goyal Brothers Prakashan Lectures In The Microeconomics Of Choice: Foundations, Consumers, And Producers William David Anthony Bryant, 2023-02-17 People pursue their own interests whatever those interests might be Some people have interests that are narrow and selfish while others have interests that are broad and altruistic The idea that people are self interested underpins all of economic analysis and raises two fundamental questions 1 How do people choose the actions they think will further their own interests 2 Can the potentially conflicting interests of different people be made to mesh in some sort of socio economic equilibrium This book is devoted to a detailed study of the first question Its Companion Volume Economy Wide Microeconomics Equilibrium Optimality Applications and Tests makes a detailed study of the second question Following some foundational remarks this book studies the Arrow Debreu theory of consumer choice That theory supposes people choose so as to maximize a complete continuous transitive and reflexive binary preference relation over a non empty and compact choice set The book then studies numerous refinements generalizations and extensions of each of these restrictions up to and including recent work on Behavioral theories of choice and choice behaviour when preferences are intransitive incomplete discontinuous Also considered is choice behaviour in environments that are not necessarily compact A study is also made of intertemporal choice and choice under uncertainty The study of Arrow Debreu choice theory and its extensions are presented from the Primal Dual and Revealed Preference points of view Consumers are not the only agents in the economy as Producers are present as well Beginning with a study of the Arrow Debreu idea that producers choose from a convex production set so as to maximize profit the book considers extensions and generalizations of this framework particularly to non convex environments The study is presented from the Primal and Dual points of view The final chapter in the book provides a link to its Companion Volume The Chapter indicates how the theories of consumer and producer choice studied here help inform answers of the second question posed above Resources are available to instructors who adopt this book More details at www.worldscientific.com/worldscibooks/10.1142/12789_sm **Natural Resource Economics: The Essentials** Tom Tietenberg, Lynne Lewis, 2019-08-01 Natural Resource Economics The Essentials offers a policy oriented approach to the increasingly influential field of natural resource economics that is based upon a solid foundation of economic theory and empirical
