Foreign Aid Allocation, Governance, and Economic Growth Kamiljon T. Akramov, 2012-05-22 How important is foreign aid in fostering economic growth in developing countries Does it help recipient countries hurt them or have little effect either way Foreign Aid Allocation Governance and Economic Growth investigates this issue by looking at foreign aid by sector rather than treating it as an aggregate amount Aid can be allocated to a recipient's production sectors such as agriculture manufacturing or mining economic infrastructure such as transport storage or communications networks or power generation facilities or social sectors such as education or healthcare This book differentiates among various channels through which each of these three categories of foreign aid affects economic growth The findings suggest that economic aid including aid to production sectors and economic infrastructure contributes to economic growth by increasing domestic investment Aid to social sectors however does not appear to have a significant impact on human capital measured by school enrollment and economic growth This study also assesses the degree to which the quality of democratic governance in a recipient country influences foreign aid's effectiveness and finds that democracy is no guarantee of aid effectiveness In fact

economic aid to less democratic countries can lead to better economic growth at least initially provided the aid recipients secure property rights and allow capital accumulation Although further research into the question is necessary Foreign Aid Allocation Governance and Economic Growth suggests that aid targeted to increasing domestic investment might be an effective means of fostering economic growth in less developed countries *The Political Economy of Economic Growth in Africa, 1960-2000* B. J. Ndulu, 2008 Volume 2 of an analysis of the economic development of Sub Saharan Africa 1960 2000

Fraumeni, 2016-01-26 Between 1948 and 1979 economic activity in the United States increased almost twice as much as over the entire preceding course of American history The traditional explanation of this remarkable development emphasizes productivity growth In the most sophisticated study to date of the factors currently affecting economic growth the authors of this book show that capital formation is far more important with the growth of labor resources and productivity a distant second Their conclusions rest on a far more detailed empirical base than any ever assembled in studies of economic growth For example the authors distinguish among 81 600 types of labor input broken down by age sex education occupation and industry of employment Similarly they disaggregate capital by industry class of asset and tax treatment Their analysis of economic growth is from the bottom up rather than the top down approach used in earlier work The new findings imply that efforts to revive U S economic growth must focus on increased supplies of capital and labor inputs This is the key to more rapid growth and international competition One of the most important features of the book is the way in which it successfully integrates the theory of producer behavior with the indexing and measurement of production growth The authors present startling new findings showing that less than one fourth of overall growth is attributable to advances in productivity
