Economics And Episodic Disease The Benefits Of Preventing A Giardiasis Outbreak:

Economics and Episodic Disease Winston Harrington, Alan J. Krupnick, Walter O. Spofford, 1991 Benefit cost analysis of public policies designed to protect the environment and the public from environmental contaminants is growing in popularity whether as the determinative criterion or as an ingredient in a broader assessment of a policy's desirability. Also growing unfortunately is the number of poorly executed analyses which not only degrade the decisions they are meant to inform but cast doubt upon the usefulness of benefit cost analysis as a decision tool. Harrington, Krupnick and Spofford display in this work an example of a properly conducted analysis. In the traditional manner of studies conducted at Resources for the Future they proceed with extreme care and attention to detail in fashioning an appropriate blend of economic theory and innovative empirical analysis to estimate the social costs to a community arising from an outbreak of waterborne disease. The focus of their study is the outbreak of giardiasis, a common diarrheal disease that raged through Luzerne County, Pennsylvania just before Christmas 1983, striking 6,000 people ill and forcing some 75,000 residents to obtain an alternative source of drinking water in some cases for as long as nine months. The results of their study have obvious bearing on the benefits communities can expect to gain from federal and state drinking water standards and on the decisions government officials face concerning public policies and projects designed to protect drinking water from contamination. Moreover, the theory that has been developed and the techniques that have been employed may be usefully applied to other areas such as food safety where the benefits of proposed regulatory programs are needed to inform public decisions or where the costs of public health episodes such as outbreaks of salmonellosis are desired. This book also provides useful information for appraising the damages to surface water and groundwater resources arising from the accidental release of hazardous substances. *Economics and Episodic Disease* demonstrates the utility of combining economics with an appropriate dose of public health and natural science to provide a means for analyzing public policy issues involving a mix of marketed and nonmarketed goods and services. *Economics and Episodic Disease* Winston Harrington, Alan J. Krupnick, Walter O. Spofford Jr., 2016-03-31

Originally published in 1991, this study uses the 1983 outbreak of Giardiasis in Luzerne County, Pennsylvania as a case study to explore the social costs of waterborne illnesses to a community. With over 6,000 people affected in that particular case, *Economics and Episodic Disease* emphasises the importance of Federal and State drinking water standards to protect the population from contamination whilst also commenting how regulations can be applied to other areas within public health as well as how to appraise the damage caused to surface water by the release of hazardous substances. This title will be of interest to students of Environmental Studies. Valuing Food Safety And Nutrition Julie A Caswell, 2019-07-23 This book focuses on the developing field of valuing food safety and nutrition. It evaluates the relative strengths, weaknesses and requirements of the major methodologies employed in valuation research. The book includes a discussion on key factors such as information on consumer attitudes. Current Catalog National Library of Medicine (U.S.), 1992 **Prevention**

Effectiveness Anne C. Haddix, Steven M. Teutsch, Phaedra S. Corso, 2003 As public accountability has increased and resources have become scarcer public health like clinical medicine has been forced to re examine the benefits and costs of its activities Decision and economic analysis are basic tools in carrying out that mission These methods have become standard practice in clinical medicine and health services research This book now in its second edition was written in an effort to apply and adapt that experience with public health situations The book was originally written to introduce Centers for Disease Control and Prevention staff to the concepts of decision and economic analysis to provide guidance on methods to maximize comparability of studies and to provide access to frequently used reference information It has been adapted to meet the needs of scientists and managers in state and local health departments and managed care organizations as well as students in schools of public health and clinicians for an introductory text a text that shows how these methods can be applied in population based practice to facilitate better comparability of studies and to solidify understanding of the scientific basis for use of these tools in decision making Decision makers will learn how these studies are conducted so they can be critical consumers understanding the strengths and limitations and apply findings to policy and practice The second edition updates and expands upon the standard methodology for conducting prevention effectiveness analyses Each chapter has been revised or re written The chapters on measuring effectiveness decision analysis and making information useful for decision makers as well as several appendices are entirely new Choosing Environmental Policy Winston Professor Harrington, Richard D. Professor Morgenstern, Thomas Professor Sterner, 2010-09-30 The two distinct approaches to environmental policy include direct regulation sometimes called command and control policies and regulation by economic or market based incentives This book is the first to compare the costs and outcomes of these approaches by examining realworld applications In a unique format paired case studies from the United States and Europe contrast direct regulation on one side of the Atlantic with an incentivebased policy on the other For example Germany s direct regulation of SO2 emissions is compared with an incentive approach in the U S Direct regulation of water pollution via the U S Clean Water Act is contrasted with Hollands incentive based fee system Additional studies contrast solutions for eliminating leaded gasoline and reducing nitrogen oxide emissions CFCs and chlorinated solvents The cases presented in *Choosing Environmental Policy* were selected to allow the sharpest most direct comparisons of direct regulation and incentive based strategies In practice environmental policy is often a mix of both types of instruments This innovative investigation will interest scholars students and policymakers who want more precise information as to what kind of blend will yield the most effective policy Are incentive instruments more efficient than regulatory ones Do regulatory policies necessarily have higher administrative costs Are incentive policies more difficult to monitor Are firms more likely to oppose market based instruments or traditional regulation These are some of the important questions the authors address often with surprising results *Pricing the Planet* Peter Herman May, Peter May, Ronaldo Serôa da Motta, 2000-08-15 An outgrowth of the 1992 Symposium and Exhibit of Environmental Technologies ECOTECH held

in Rio de Janeiro as part of the UN Conference on Environment and Development UNCED this book addresses our ecological future and explores alternatives to mainstream solutions

Regional Cooperation for Water Quality Improvement in Southwestern Pennsylvania National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Water Quality Improvement for the Pittsburgh Region, 2005-05-04 The city of Pittsburgh and surrounding area of southwestern Pennsylvania face complex water quality problems due in large part to aging wastewater infrastructures that cannot handle sewer overflows and stormwater runoff especially during wet weather Other problems such as acid mine drainage are a legacy of the region's past coal mining heavy industry and manufacturing economy Currently water planning and management in southwestern Pennsylvania is highly fragmented federal and state governments 11 counties hundreds of municipalities and other entities all play roles but with little coordination or cooperation The report finds that a comprehensive watershed based approach is needed to effectively meet water quality standards throughout the region in the most cost effective manner The report outlines both technical and institutional alternatives to consider in the development and implementation of such an approach

Comparing Environmental Risks J. Clarence Davies, 2014-04-04 The budgetary squeeze of the 1990s has made it obvious that the government cannot address every possible environmental problem Comparative risk assessment CRA is increasingly advanced as the means for setting realistic priorities RFF's Center for Risk Management commissioned background papers from leading experts on CRA for a meeting with federal regulatory officials Comparing Environmental Risks presents the revised papers of this workshop Representing the state of the art on programmatic CRA its methodological analyses and practical recommendations will be invaluable to government officials independent analysts and anyone studying environmental policy

America's Renewable Resources Kenneth D. Frederick, Roger A. Sedjo, 2013-10-18 By recording one country's experience with its vast natural resource base America's Renewable Resources Historical Trends and Current Challenges will help to inform the management of future demands on the resource base in the U S and throughout the world The contributors focus specifically on renewable resources water forests rangeland cropland and soils and wildlife which possess the capacity to restore themselves after they have been consumed Because this capacity can be destroyed and the time required for restoration can be very long a balance in their use is necessary to sustain continued productivity In arresting fashion the authors trace the history of each resource's use from early colonial times through periods of dramatic sometimes cataclysmic changes in its utilization by an expanding diversifying society They show how unforeseen consequences have forced social institutions into existence and compelled policy makers especially at the federal level to deal with problems for which they were largely unprepared America's Renewable Resources by examining changes in demand technologies policies and institutions will assist both policy makers and the public at large to look past short term events to the conditions
