Clark, Stephen Coate, National Bureau of Economic Research, 2014 Public school choice programs give households a free choice of public school and provide schools incentives to compete for students Proponents of these programs argue that by the usual market logic choice and competition will improve the quality of the education that schools provide Critics counter that the usual market logic does not translate easily to schools since households perceptions of school quality depend not only on the efforts of school personnel but also on the composition of the student body i e households have peer preferences This paper advances this debate by developing and analyzing an economic model of public school choice To capture the pro choice argument the model assumes that a neighborhood enrollment policy that provides schools with no incentives to exert effort is replaced by a prototypical public school choice policy in which households have a free choice of school and schools have incentives to compete for students To capture the anti choice argument the model assumes that households have peer preferences The analysis of the equilibrium of this model generates three findings that highlight potential limitations of choice programs *School Choice in China* Wu Xiaoxin, 2013-10-15 School Choice in China explores the major

characteristics of schooling options in China highlighting how largely middle class parents exploit their cultural economic and social capital for their children s admission into choice schools It highlights how payments such as choice fees donations prize winning certificates and awards as well as the use of guanxi result in Chinese school choice as a parent driven bottom up movement The author also explores how schools and local governments cash in on the school choice fever in order to obtain significant economic returns leading to policies that accommodate the needs of mostly middle class families He argues that although this system seems to create winners among the parties involved it exacerbates the educational inequality that already exists in Chinese society Chapters include Positional competition for cultural capital Exploitation of social capital Economics of school choice Class reproduction through parental choice This book is not simply a detailed analysis of Chinese school choice practices but also a study of the competitive middle class search for advantage for their children As such it will be beneficial to undergraduates postgraduates education professionals policy makers and anyone with an interest in education sociology social policy and the rise and future of China *The Routledge Handbook of the Economics of Education* Brian P. School Choice and School Productivity (or Could School Choice be a Tide that Lifts All Boats?), 2002 A school that is more productive is one that produces higher achievement in its pupils for each dollar it spends In this paper I comprehensively review how school choice might affect productivity I begin by describing the importance of school productivity then explain the economic logic that suggests that choice will affect productivity and finish by presenting much of the available evidence on school choice and school productivity The most intriguing evidence comes from three important recent choice reforms vouchers in Milwaukee charter schools in Michigan and charter schools in Arizona I show that public

school students achievement rose significantly and rapidly in response to competition under each of the three reforms Public school spending was unaffected so the productivity of public schools rose dramatically in the case in Milwaukee
