The Economics of the Global Environment Graciela Chichilnisky, Armon Rezai, 2017-05-18 This is the first book combining research on the Global Environment Catastrophic Risks and Economic Theory and Policy Modern economic theory originated in the middle of the twentieth century when industrial expansion coupled with population growth led to a voracious use of natural resources and global environmental concerns It is uncontested that for the first time in recorded history humans dominate the planet changing the planet's atmosphere its bodies of water and the complex web of species that makes life on earth This radical change in circumstances led to rethinking of the foundations of human organization and in particular the industrial economy and the economic theory behind it This book brings together new approaches on multiple levels environmental sustainability requires rethinking in terms of economic theory and policy as well as the considerations of catastrophic risk and extremal events Leading experts address questions of economic governance risk management policy decision making and distribution across time and space

policymakers can institute Part II looks at global climate change using these same growth models Here too the authors provide direct and transparent policy implications More specifically the authors favour tax measures such as a carbon tax over emission trading as instruments of mitigation policies Part III evaluates the use and overuse of renewable and non renewable resources in the context of a variety of dynamic models They in particular consider the cases when resources interact as an ecological system and analyze issues of ownership of resources as well as policy measures to avoid the overuse of resources In addition not only intertemporal resource allocation but also the eminent issues relating to intertemporal inequities as well as policy measures to overcome them are discussed in each part of the book

Global Environmental Politics Johannes Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics Led by China and India they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western led initiatives neglect their needs What does the global environmental policy landscape look like in the age of a rising Global South This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation Johannes

Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes. However, he argues, despite barriers to cooperation, innovative bargaining and institutional design offer a way forward. Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments. The book features detailed discussions of attempts to address hazardous chemicals, loss of biodiversity and climate change, a comparative analysis of China and India and case studies of nine other emerging economies around the world. *Global Environmental Politics* is an essential forward looking overview of today's most pressing international issue. *Handbook of Global Environmental Politics* Peter Dauvergne, 2012-01-01. The second edition of this Handbook contains more than 30 new and original articles as well as six essential updates by leading scholars of global environmental politics. This landmark book maps the latest theoretical and empirical research in this energetic and growing field. Captured here are the pioneering and lively debates over concerns for the health of the planet and how they might best be addressed. The introduction explores the intellectual trends and evolving parameters in the field of global environmental politics. It makes a case for an expansive definition of the field, one that embraces an interdisciplinary literature on the connections between global politics and environmental change. The remaining chapters are divided into four broad themes: states and cooperation, global governance, the political economy of governance and knowledge and ethics, with each section covering key emerging issues. In depth explorations are given to topics such as climate change, multinational corporations, international agreements and UN organizations, regulations and business standards, trade and international finance, multilevel and transnational governance and ecological citizenship. *Handbook of Global Environmental Politics, Second Edition* is a comprehensive review of the field and offers cutting edge ideas for further research. As such, scholars, students and policymakers will find themselves looking to it for many years to come. *Report on Global Environmental Competitiveness (2013)* Li Jianping, Li Minrong, Wang Jinnan, Li Jianjian, Su Hongwen, Huang Maoxing, 2014-07-08. This book explores the environmental competitiveness of 133 countries around the world, presenting an index evaluation system to facilitate a comparative analysis of environmental competitiveness on a global scale. This is a new way to measure competitiveness in the light of the contradiction between world economic development and environmental protection. Global environmental competitiveness covers five aspects: the ecological environment, resources, environment, environmental management, environmental impacts and environmental coordination. The authors use longitudinal study and horizontal analysis, combining qualitative and quantitative analysis methods, so as to conduct an in depth study of theoretical, empirical and methodological issues of global environmental competitiveness. The work is presented here in three main parts, beginning with the theory, technical road map and analytical approach used. The second part reports on the countries as evaluation objects, analyzing the development status of global environmental competitiveness as a whole and revealing the strengths and weaknesses of each country's environmental competitiveness.

Basic paths and strategies to enhance the competitiveness level are presented. In the third part the reader will discover a sub report and evaluation of the environmental competitiveness for 133 countries around the world revealing the characteristics and relative differences of countries representing different levels of development in order to provide an important decision making reference to those considering environmental economic policies especially those considering accelerating a green economic transformation and enhancing environmental competitiveness. This book will appeal to scholars and professionals with an interest in environmental issues and environmental competitiveness at a global level as well as those with an interest in each of the 133 countries analyzed in this text including environmental policy makers in those countries. **The Global**

Environment, Natural Resources, and Economic Growth Alfred Greiner, Will Semmler, 2008-07-25. Recently the public attention has turned toward the intricate interrelation between economic growth and global warming. This book focuses on this nexus but broadens the framework to study the issue. Growth is seen as global growth which affects the global environment and climate change. Global growth in particular high economic growth rates imply a fast depletion of renewable and non renewable resources. Thus this book deals with the impact of the environment and the effect of the exhaustive use of natural resources on economic growth and welfare of market economies as well as the reverse linkage. It is arranged in three parts. Part I of the book discusses the environment and growth. There Greiner and Semmler incorporate the role of environmental pollution into modern endogenous growth models and use recently developed dynamic methods and techniques to derive appropriate abatement activities that policymakers can institute. Part II looks at global climate change using these same growth models. Here too the authors provide direct and transparent policy implications. More specifically the authors favour tax measures such as a carbon tax over emission trading as instruments of mitigation policies. Part III evaluates the use and overuse of renewable and non renewable resources in the context of a variety of dynamic models. They in particular consider the cases when resources interact as an ecological system and analyze issues of ownership of resources as well as policy measures to avoid the overuse of resources. In addition not only intertemporal resource allocation but also the eminent issues relating to intertemporal inequities as well as policy measures to overcome them are discussed in each part of the book. The Global Environment of Business David W. Conklin, 2010-05-06. The Global Environment of

Business provides students with a truly international perspective that integrates both market industry structure and nonmarket i.e. political forces analysis concisely in a way not found in other texts. The following key issues are emphasized. Industry Structure: Management must strategize to deal with the bargaining strength of customers, suppliers and competitors on a country by country basis. Low cost labour and outsourcing are changing the nature of the firm dramatically. Macroeconomic Forces: Management must formulate country strategies in light of each country's income levels and growth rates, foreign exchange rates, inflation rates, interest rates and unemployment rates. Political Forces: Regulations, financial incentives, tax regimes, investment restrictions and trade agreements differ widely from country to country. Societal Forces

Ethics labour and environmental practices differ from country to country In addition specific consumer preferences and demographic trends must play a role in national strategies Technological Forces Strategies must correspond to each country s technological infrastructure and the pace and direction of technological change

Economics and the Global Environmental Challenge David Pearce,1990 **Analyzing Global Environmental Issues** Ariel Dinar,Amnon Rapoport,2013 The existence of environmental dilemmas and political conflicts leads us to appreciate the need for individuals and groups to behave strategically in order to achieve their goals and maintain their wellbeing Global issues such as climate change resource depletion and pollution as well as revolts and protests against corporations regimes and other central authorities are the result of increased levels of externalities among individuals and nations These all require policy intervention at international and global levels This book includes chapters by experts proposing game theoretical solutions and applying experimental design to a variety of social issues related to global and international conflicts over natural resources and the environment The focus of the book is on applications that have policy implications relevance and consequently could lead to the establishment of policy dialogue The chapters in the book address issues that are global in nature such as international environmental agreements over climate change international water management common pool resources public goods international fisheries international trade and collective action protest and revolt The book s main objective is to illustrate the usefulness of game theory and experimental economics in policy making at multiple levels and for various aspects related to global and international issues The subject area of this book is already widely taught and researched but it continues to gain popularity given growing recognition that the environment and natural resources have become more strategic in human behavior
