Social Determinants of Health, Fourth Edition Dennis Raphael,2025-01-06 Now in its fourth edition Dennis

Raphael's *Social Determinants of Health* offers the definitive Canadian discussion of the primary factors that influence the health of Canada's population. This unique text on the social determinants of health contains contributions from top academics and high profile experts from across Canada. Taking a public policy approach, the contributors to this edited collection critically analyze the structural inequalities embedded in our society and the socio-economic factors that affect health, including income, education, employment, housing, food security, gender, and race. This new edition includes recent statistics, new developments in early childhood education, and the implementation of Canada's national childcare system, and new content on the social determinants of Indigenous Peoples' health. Particular attention is paid to how economic globalization and the acceptance of neoliberal governing ideology is shaping the health of Canadians. The COVID-19 epidemic vividly illustrated the importance of the social determinants of health, as sickness and death rates were strikingly higher among Canadians in groups already experiencing adverse living and working conditions and poorer health: lower income Canadians, recent immigrants of colour, and those experiencing housing and food insecurity. If anything positive is to come out of this experience, it will be recognition that in the current post-COVID-19 environment, it is essential to understand the socio-economic conditions that shape the health of individuals and communities. *Social Determinants of Health, Fourth Edition* is aimed at courses focusing on the social determinants of health at Canadian universities and colleges, particularly those in health studies and nursing, but also allied health, sociology, and human services.

Evidence-based Care for Breastfeeding Mothers Maria Pollard, 2013-03-01. Breastfeeding is a major public health issue. Breast milk provides all the nutrients a baby needs for their first six months. Research studies also show that breastfeeding doesn't just help to protect infants from infection, but has other benefits, such as reducing obesity, and can help protect mothers from some diseases in later life. Breastfeeding rates are low, however, and women need the support of their midwives and health visitors when beginning breastfeeding and throughout their child's infancy. Based on the UNICEF UK BFI Best Practice Standards for Higher Education Institutions, this accessible textbook addresses all 18 outcomes to ensure that students are equipped with the essential knowledge and skills to effectively promote and support breastfeeding mothers, including anatomy and physiology, essential skills, and good practice guidance dealing with common problems, public health considerations, babies and mothers with special needs, complementary feeding. Suitable for both undergraduate students and practitioners undertaking continuing professional development. *Evidence-based Care for Breastfeeding Mothers* is designed to aid learning. Each chapter includes specific learning outcomes linked to the Baby Friendly standards, key fact boxes, clinical scenarios, and activities.
