## Ecology And Land Management In Amazonia:

**Ecology and Land Management in Amazonia** Michael John Eden, 1990      **Ecology and Land Management in Amazonia** Michael J. Eden, 1994-02-28      **Ecology and Land Management in Amazonia** Michael John Eden, 1990      In Amazonia Hugh Raffles, 2014-09-15

The Amazon is not what it seems As Hugh Raffles shows us in this captivating and innovative book the world's last great wilderness has been transformed again and again by human activity In Amazonia brings to life an Amazon whose allure and reality lie as much or more in what people have made of it as in what nature has wrought It casts new light on centuries of encounter while describing the dramatic remaking of a sweeping landscape by residents of one small community in the Brazilian Amazon Combining richly textured ethnographic research and lively historical analysis Raffles weaves a fascinating story that changes our understanding of this region and challenges us to rethink what we mean by nature Raffles draws from a wide range of material to demonstrate in contrast to the tendency to downplay human agency in the Amazon that the region is an outcome of the intimately intertwined histories of humans and nonhumans He moves between a detailed narrative that analyzes the production of scientific knowledge about Amazonia over the centuries and an absorbing account of the extraordinary transformations to the fluvial landscape carried out over the past forty years by the inhabitants of Igarap Guariba four hours downstream from the nearest city Engagingly written theoretically inventive and vividly illustrated the book introduces a diverse range of characters from sixteenth century explorers and their native rivals to nineteenth century naturalists and contemporary ecologists logging company executives and river traders A natural history of a different kind In Amazonia shows how humans animals rivers and forests all participate in the making of a region that remains today at the center of debates in environmental politics

*Advances in Historical Ecology* William L. Balée, 2012-09-18 Ecology is an attempt to understand the reciprocal relationship between living and nonliving elements of the earth For years however the discipline either neglected the human element entirely or presumed its effect on natural ecosystems to be invariably negative Among social scientists notably in geography and anthropology efforts to address this human environment interaction have been criticized as deterministic and mechanistic Bridging the divide between social and natural sciences the contributors to this book use a more holistic perspective to explore the relationships between humans and their environment Exploring short and long term local and global change eighteen specialists in anthropology geography history ethnobiology and related disciplines present new perspectives on historical ecology A broad theoretical background on the material factors central to the field is presented such as anthropogenic fire soils and pathogens A series of regional applications of this knowledge base investigates landscape transformations over time in South America the Mississippi Delta the Great Basin Thailand and India The contributors focus on traditional societies where lands are most at risk from the incursions of complex state level societies This book lays the groundwork for a more meaningful understanding of humankind's interaction with its biosphere Scholars and environmental

policymakers alike will appreciate this new critical vocabulary for grasping biocultural phenomena      Cultivated Landscapes of Native Amazonia and the Andes William M. Denevan, 2002 Cultivated Landscapes of Native Amazonia and the Andes examines Indian agriculture in South America The focus is on field types and field technologies including agricultural landforms such as terraces canals and drained fields which have persisted for hundreds of years What emerges is a picture of mostly successful indigenous farming practices in difficult environments rain forests savannahs swamps rugged mountains and deserts      **Perspectives In Resource Management In Developing Countries (volume Iv: Land Appraisal And Development)** Baleshwar Thakur, 2009      **Human Impacts on Amazonia** Darrell A. Posey, Michael J. Balick, 2006-07-11 From the pre Columbian era to the present native Amazonians have shaped the land around them emphasizing utilization conservation and sustainability These priorities stand in stark contrast to colonial and contemporary exploitation of Amazonia by outside interests With essays from environmental scientists botanists and anthropologists this volume explores the various effects of human development on Amazonia The contributors argue that by protecting and drawing on local knowledge and values further environmental ruin can be avoided      *The Forest Frontier* Peter A. Furley, 2024-06-25 Originally published in 1994 this book analysed land developments deforestation and pasture substitution colonisation schemes and spontaneous settlement during the latter part of the 20th Century In so doing The Forest Frontier presents an overview of the intrinsic environmental and socio economic resources of the Roraima the most northerly of the Brazilian Amazon states Roraima is of special environmental interest because of its extensive savannas and varied forests the home of some of the largest and most diverse groups of indigenous Indians This critical assessment of the nature and pace of agricultural advance into Roraima examines the range of strategies which have been proposed to cope with the inevitable development With the conflict between preserving the natural environment and development still major issues for Brazil this book remains as relevant now as when it was first published      **Towns, Ecology, and the Land** Richard T. T. Forman, 2019-02-07 Towns and villages are sometimes viewed as minor even quaint spots whereas this book boldly reconceptualizes these places as important dynamic environmental hotspots Multitudes of towns and villages with nearly half the world's population characterize perhaps half the global land surface The book's pages feature ecological patterns processes and change as well as human dimensions both within towns and in strong connections and effects on surrounding agricultural land forest land and arid land Towns small to large and villages are examined with spatial and cultural lenses Ecological dimensions water soil and air systems together with habitats plants wildlife and biodiversity are highlighted A concluding section presents concepts for making better towns and better land From a pioneer in both landscape ecology and urban ecology this highly international town ecology book opens an important frontier for researchers students professors and professionals including environmental town and conservation planners      **Developing The Environment** C J Barrow, 2014-09-19 This book presents a comprehensive overview of global environmental problems past present and future examining their roots and implications and suggesting

where possible ways in which they might be mitigated or avoided by careful management

**The Physical Geography of South America** Thomas T. Veblen, Kenneth R. Young, Antony R. Orme, 2015-04-01 The Physical Geography of South America the eighth volume in the Oxford Regional Environments series presents an enduring statement on the physical and biogeographic conditions of this remarkable continent and their relationships to human activity It fills a void in recent environmental literature by assembling a team of specialists from within and beyond South America in order to provide an integrated cross disciplinary body of knowledge about this mostly tropical continent together with its high mountains and temperate southern cone The authors systematically cover the main components of the South American environment tectonism climate glaciation natural landscape changes rivers vegetation animals and soils The book then presents more specific treatments of regions with special attributes from the tropical forests of the Amazon basin to the Atacama Desert and Patagonian steppe and from the Atlantic Caribbean and Pacific coasts to the high Andes Additionally the continents environments are given a human face by evaluating the roles played by people over time from pre European and European colonial impacts to the effects of modern agriculture and urbanization and from interactions with El Ni o events to prognoses for the future environments of the continent

**Tropical Rain Forest: A Wider Perspective** F.B. Goldsmith, 2012-12-06 The international perspective for this book is the unprecedented level of concern over deforestation recognized by the meeting of world leaders at the 1992 Earth Summit in Rio de Janeiro and culminating in the appointment of the Intergovernmental Panel on Forests IPF under the auspices of the UN Commission on Sustainable Development The wide range of issues covered by the authors in this volume reflects the breadth of the international debate from national policies and activist campaigning through economic and social objectives to the sustainable management of forest and soil resources Since the conservation campaigns of the 1980s the focus of international concern has widened from tropical rain forests to all forest formations in all regions with increased recognition of global values and common responsibilities However while forest cover in some temperate countries is increasing irrational deforestation at historically unprecedented levels of damage to biodiversity and to other environmental values remains most acute in tropical countries where the need to use the natural resources for sustainable development is greatest and the capability weakest While accepting the urgency of the situation and the need for greater coherence of action at a global level the 1997 report of the IPF to the UN Commission emphasized the powers and responsibilities of national governments and the importance of National Forest Programmes but with the fuller participation of local communities and with enhanced access to international assistance

Tropical Deforestation Thomas K. Rudel, Bruce Horowitz, 1993-07-29 Addressing decades of rain forest destruction concerned scientists often in concert with various environmental movements have amassed an impressive amount of information on deforestation in areas throughout the world In Tropical Forests Rudel draws upon hundreds of these studies to develop a broader perspective on the problem of deforestation Through a meta analysis Rudel identifies the forces that have driven forest cover change since

1980 and spells out their implications for efforts to conserve biodiversity and expedite sustainable development in the tropics Rudel builds on local studies to offer clear explanations of what has happened in each of the world's tropical forest regions He assesses global trends while also offering vivid descriptions of the effects of deforestation in specific areas His work concludes with a chapter that describes policy directions for conserving biodiversity and promoting sustainable development in each region

**Ethnozoology** Romulo Romeu Nobrega Alves, Ulysses Paulino Albuquerque, 2017-10-23 Ethnozoology Animals In Our Lives represents the first book about this discipline providing a discussion on key themes on human animal interactions and their implications along with recent major advances in research Humans share the world with a bewildering variety of other animals and have interacted with them in different ways This variety of interactions both past and present is investigated through ethnozoology which is a hybrid discipline structured with elements from both the natural and social sciences as it seeks to understand how humans have perceived and interacted with faunal resources throughout history In a broader context ethnozoology and its companion discipline ethnobotany form part of the larger body of the science of ethnobiology In recent years the importance of ethnozoological ethnobiological studies has increasingly been recognized unsurprisingly given the strong human influence on biodiversity From the perspective of ethnozoology the book addresses all aspects of human connection animals and health from its use in traditional medicine to bioprospecting derivatives of fauna for pharmaceuticals with expert contributions from leading researchers in the field Draws on editors and contributors extensive research experience and studies covering ethnozoology and ethnobiology Covers all aspects of human animal interaction through the lens of this emerging discipline with coverage of both domestic and wild animal topics Presents topics of great interest to a variety of researchers including those in wildlife conservation biologists ecologists conservationists and domestic related disciplines psychologists sociologists

**Soil Biodiversity in Amazonian and Other Brazilian Ecosystems** F. M. S. Moreira, J. O. Siqueira, L. Brussaard, 2006 The loss of biological diversity has become an increased concern over recent years and is now enshrined in international conventions Most biodiversity in fact occurs in the soil Soil organisms especially bacteria fungi and soil invertebrates play a major role in the formation of soil structure and are primary agents of decomposition and are drivers of nutrient cycling and hence agricultural production This book reviews soil biodiversity in one of the key biodiversity hotspots of the world i.e. the Amazon and nearby regions of Brazil It covers both the tropical savannah and rain forests The work reported is based on a project Conservation and Sustainable Management of Below Ground Biodiversity executed by TSBF CIAT with co financing from the Global Environment Facility GEF and implementation support from the United Nations Environment Programme UNEP The book represents a major contribution to the literature and will interest those in biodiversity conservation soil science and ecology and biodiversity conservation

Forest, Field, and Fallow Antoinette M.G.A. Winkler-Prins, Kent Mathewson, 2021-01-12 This volume aims to present the essential work of geographer and historical ecologist William M Denevan to explain the impact and influence his thinking had

on the conceptual advancement not only in his own discipline but in a range of related disciplines such as anthropology archaeology and environmental history The book is organized around eight themes demonstrating Denevan's early and profound insights on topics that remain of current relevance today and the scholarly impact his writing had on subsequent scholarship The book is unique because it offers commentary from active scholars who address the impacts of Prof Denevan's thinking and work on contemporary environmental and ecological issues with a focus on several groundbreaking themes e.g. historical demography agricultural landforms cultural plant geography human environmental impacts indigenous agroecology tropical agriculture livestock and landscape and synthetic contributions This book will be of interest to a range of scholars in geography anthropology archaeology history and ecology as well as to environmental managers and practitioners especially those working for non profit organizations and government organizations tasked with finding ways to adapt to global environmental change

Remote Sensing and Tropical Land Management Commonwealth Geographical Bureau, 1986 A collection of research based studies covering the range of remote sensing techniques from conventional aerial photography to computer processed satellite imagery which illustrate both the potential and the constraints of advanced technology in relation to land management It demonstrates the use of remote sensing as an aid to the management of renewable resources in forests rangelands and agricultural land of the tropics

**An Environmental History of the World** Johnson Donald Hughes, 2001 This original work follows a chronological path through the history of mankind in relationship to ecosystems around the world Each chapter concentrates on a general period in human history each also has three case studies which illustrate the significant patterns occurring at that time

*Land Change Science, Political Ecology, and Sustainability* Christian Brannstrom, Jacqueline M. Vadjunec, 2014-01-23 Recent claims regarding convergence and divergence between land change science and political ecology as approaches to the study of human environment relationships and sustainability science are examined and analyzed in this innovative volume Comprised of 11 commissioned chapters as well as introductory and concluding synthesis chapters it advances the two fields by proposing new conceptual and methodological approaches toward integrating land change science and political ecology The book also identifies areas of fundamental difference and disagreement between fields These theoretical contributions will help a generation of young researchers refine their research approaches and will advance a debate among established scholars in geography land use studies and sustainability science that has been developing since the early 2000s At an empirical level case studies focusing on sustainable development are included from Africa Central and South America and Southeast Asia The specific topics addressed include tropical deforestation swidden agriculture mangrove forests gender and household issues
