Barndorff-Nielsen, 1996-05-15 The analysis prediction and interpolation of economic and other time series has a long history and many applications Major new developments are taking place driven partly by the need to analyze financial data The five papers in this book describe those new developments from various viewpoints and are intended to be an introduction accessible to readers from a range of backgrounds The book arises out of the second Seminaire European de Statistique SEMSTAT held in Oxford in December 1994 This brought together young statisticians from across Europe and a series of introductory lectures were given on topics at the forefront of current research activity The lectures form the basis for the five papers contained in the book The papers by Shephard and Johansen deal respectively with time series models for volatility i.e variance heterogeneity and with cointegration Clements and Hendry analyze the nature of prediction errors A complementary review paper by Laird gives a biometrical view of the analysis of short time series Finally Astrup and Nielsen give a mathematical introduction to the study of option pricing Whilst the book draws its primary motivation from financial series and from multivariate econometric modelling the applications are potentially much

**Modelling Trends and Cycles in Economic Time Series** T. Mills,2003-05-15 Modelling trends and cycles in economic time series has a long history with the use of linear trends and moving averages forming the basic tool kit of economists until the 1970s Several developments in econometrics then led to an overhaul of the techniques used to extract trends and cycles from time series Terence Mills introduces these various approaches to allow students and researchers to appreciate the variety of techniques and the considerations that underpin their choice for modelling trends and cycles      *Modelling Trends*

Maximum likelihood estimation is a general method for estimating the parameters of econometric models from observed data The principle of maximum likelihood plays a central role in the exposition of this book since a number of estimators used in econometrics can be derived within this framework Examples include ordinary least squares generalized least squares and full information maximum likelihood In deriving the maximum likelihood estimator a key concept is the joint probability density function pdf of the observed random variables  $y_t$  Maximum likelihood estimation requires that the following conditions are satisfied 1 The form of the joint pdf of  $y_t$  is known 2 The specification of the moments of the joint pdf are known 3 The joint pdf can be evaluated for all values of the parameters 9 Parts ONE and TWO of this book deal with models in which all these conditions are satisfied Part THREE investigates models in which these conditions are not satisfied and considers four important cases First if the distribution of  $y_t$  is misspecified resulting in both conditions 1 and 2 being violated estimation is by quasi maximum likelihood Chapter 9 Second if condition 1 is not satisfied a generalized method of moments

estimator Chapter 10 is required Third if condition 2 is not satisfied estimation relies on nonparametric methods Chapter 11 Fourth if condition 3 is violated simulation based estimation methods are used Chapter 12 1 2 Motivating Examples To highlight the role of probability distributions in maximum likelihood estimation this section emphasizes the link between observed sample data and 4 The Maximum Likelihood Principle the probability distribution from which they are drawn publisher *Advances in Econometrics* Dek Terrell, Thomas B.
