Economic And Financial Knowledge Based Processing:

Economic and Financial Knowledge-Based Processing Louis F. Pau, Claudio Gianotti, 2012-12-06 As banks financial services insurances and economic research units worldwide strive to add knowledge based capabilities to their analyses and services or to create new ones this volume aims to provide them with concrete tools methods and application possibilities The tutorial component of the book relies on case study illustrations and on source code in some of the major artificial intelligence languages The applications related component includes an extensive survey of real projects and a number of thorough generic methods and tools for auditing technical analysis information screens and natural language front ends The research related component highlights novel methods and software for economic reasoning under uncertainty and for fusion of qualitative quantitative model based economic reasoning

Handbook of Pattern Recognition and Computer Vision C. H. Chen, L. F. Pau, P. S. Wang, 1993-08 The book provides an up to date and authoritative treatment of pattern recognition and computer vision with chapters written by leaders in the field On the basic methods in pattern recognition and computer vision topics range from statistical pattern recognition to array grammars to projective geometry to skeletonization and shape and texture measures **BOOK JACKET** [Principles of Efficient Information Management](#) August-Wilhelm

Scheer, 2012-12-06 The first edition of this book appeared in the Federal Republic of Germany in 1984 and in English translation as *Computer A Challenge for Business Administration* in 1985 This book which is a translation of the fourth German edition has been comprehensively revised As a result both the character and the expected audience of the book have changed which is reflected in the alteration to the title This book addresses itself to issues arising from the research areas of both information systems and computer science Computer science departments are primarily concerned with the development of EDP techniques and the business economics aspects remain largely Ignored The emphasis in information systems departments is placed on the investigation of the business economic impact of the use of already existing systems This strongly empirical approach is accompanied by a disinclination to consider actual system design this is considered the responsibility of the software houses This partitioning however leaves untapped the considerable potential which could be realized by an interdisciplinary approach from computer science and business economics An isolated approach neglects both the effects that business economics can have on the implementation of EDP techniques and the structural impact of EDP on business economics
