*Diderot's*

Part Andrew H. Clark, 2017-03-02 Drawing upon the rich heterogeneity of Denis Diderot's texts whether scientific aesthetic philosophic or literary Andrew Clark locates and examines an important epistemological shift both in Diderot's oeuvre and in the eighteenth century more generally In Western Europe during the 1750s the human body was reconceptualized as physiologists began to emphasize the connections communication and relationships among relatively autonomous somatic parts and an animated whole This new conceptualization was part of a larger philosophical and epistemological shift in the relationship of part to whole as discovered in that of bee to swarm organ to body word to phrase dissonant chord to harmonic progression article to encyclopedia and individual citizen to body politic Starting from Diderot's concept of the body as elaborated from the physiological research and speculation of contemporaries such as Haller and Bordeu the author investigates how the logic of an unstable relationship of part to whole animates much of Diderot's writing in genres ranging from art criticism to theatre to philosophy of science In particular Clark examines the musical figure of dissonance a figure used by Diderot himself as a useful theoretical model to give insight into these complex relations This study brings a fresh approach to the classic question of whether Diderot's work represents a consistent point of view or a series of ruptures and changes of position

*Life-Destroying Diagrams* Eugenie Brinkema, 2022-01-14 In *Life Destroying Diagrams* Eugenie Brinkema brings the insights of her radical formalism to bear on supremely risky terrain the ethical extremes of horror and love Through close readings of works of film literature and philosophy she explores how diagrams grids charts lists abecedaria toroids tempos patterns colors negative space lengths increments and thresholds attest to formal logics of torture and cruelty violence and finitude friendship and eros debt and care Beginning with a wholesale rethinking of the affect of horror orienting it away from entrenched models of feeling toward impersonal schemes and structures Brinkema moves outward to consider the relation between objects and affects humiliation and metaphysics genre and the general bodily destruction and aesthetic generation geometry and scenography hatred and value love and measurement and ultimately the tensions hazards and speculative promise of formalism itself Replete with etymological meditations performative typography and lyrical digressions *Life Destroying Diagrams* is at once a model of reading without guarantee and a series of generative experiments in the writing of aesthetic theory

**The Anatomist Anatomist's** Andrew Cunningham, 2016-12-05 The eighteenth century practitioners of anatomy saw their own period as the perfection of anatomy This book looks at the investigation of anatomy in the long eighteenth century in disciplinary terms This means looking in a novel way not only at the practical aspects of anatomizing but also at questions of how one became an anatomist where and how the discipline was practised what the point was of its practice what counted as sub disciplines of anatomy and the nature of arguments over

anatomical facts and priority of discovery In particular pathology generation and birth and comparative anatomy are shown to have been linked together as sub disciplines of anatomy At first sight anatomy seems the most long lived and stable of medical disciplines from Galen and Vesalius to the present But Cunningham argues that anatomy was like so many other areas of knowledge changed irrevocably around the end of the eighteenth century with the creation of new disciplines new forms of knowledge and new ways of investigation The long eighteenth century therefore was not only the highpoint of anatomy but also the endpoint of old anatomy First Lines of Physiology Daniel Oliver,1844 *The Phonographic Instructor: Being an Introduction to the Corresponding Style of Phonography* James Curtis Booth,1852 **An Account of the Organization of the Army of the United States** Fayette Robinson,1848 The American Journal of the Medical Sciences ,1836 *Matters of the Heart* Fay Bound Alberti,2010-01-14 The heart is the most symbolic organ of the human body Across cultures it is seen as the site of emotions as well as the origin of life We feel emotions in the heart from the heart stopping sensation of romantic love to the crushing sensation of despair And yet since the nineteenth century the heart has been redefined in medical terms as a pump an organ responsible for the circulation of the blood Emotions have been removed from the heart as an active site of influence and towards the brain It is the brain that is the organ most commonly associated with emotion in the modern West So why then do the emotional meanings of the heart linger Why do many transplantation patients believe that the heart for instance can transmit memories and emotions and why do we still refer to emotions as heartfelt We cannot answer these questions without reference to the history of the heart as both physical organ and emotional symbol *Matters of the Heart* traces the ways emotions have been understood between the seventeenth and nineteenth centuries as both physical entities and spiritual experiences With reference to historical interpretations of such key concepts as gender emotion subjectivity and the self it also addresses the shifting relationship from heart to brain as competing centres of emotion in the West **Index Catalogue of the Library of the Surgeon-general's Office, United States Army** Library of the Surgeon-General's Office (U.S.),1890 *This Mortal Coil* Fay Bound Alberti,2016 With wit insight and earthy wisdom a book that explores the nature of the self the relationship between the brain and the heart the gendering of our physical and emotional selves and the struggle to accommodate mind and body emotions and experience **A System of Elocution** Andrew Comstock,1853 **The Early History of Embodied Cognition 1740-1920** ,2016-01-12 This pioneering book evaluates the early history of embodied cognition It explores for the first time the life force Lebenskraft debate in Germany which was manifest in philosophical reflection medical treatise scientific experimentation theoretical physics aesthetic theory and literary practice esp 1740 1920 The history of vitalism is considered in the context of contemporary discourses on radical reality or deep naturalism We ask how animate matter and cognition arise and are maintained through agent environment dynamics Whitehead or performance Pickering This book adopts a nonrepresentational approach to studying perception action and cognition which Anthony Chemero designated radical
