Isomorphism Problem In Coxeter Groups:

The Isomorphism Problem in Coxeter Groups C. Patrick Bahls, 2005 The book is the first to give a comprehensive overview of the techniques and tools currently being used in the study of combinatorial problems in Coxeter groups It is self contained and accessible even to advanced undergraduate students of mathematics The primary purpose of the book is to highlight approximations to the difficult isomorphism problem in Coxeter groups A number of theorems relating to this problem are stated and proven Most of the results addressed here concern conditions which can be seen as varying degrees of uniqueness of representations of Coxeter groups Throughout the investigation the readers are introduced to a large number of tools in the theory of Coxeter groups drawn from dozens of recent articles by prominent researchers in geometric and combinatorial group theory among other fields As the central problem of the book may in fact be solved soon the book aims to go further providing the readers with many techniques that can be used to answer more general questions The readers are challenged to practice those techniques by solving exercises a list of which concludes each chapter

Mathematical Reviews, 2008 Office Hours with a Geometric Group Theorist Matt Clay, Dan Margalit, 2017-07-11

Geometric group theory is the study of the interplay between groups and the spaces they act on and has its roots in the works of Henri Poincaré Felix Klein J H C Whitehead and Max Dehn Office Hours with a Geometric Group Theorist brings together leading experts who provide one on one instruction on key topics in this exciting and relatively new field of mathematics It's like having office hours with your most trusted math professors An essential primer for undergraduates making the leap to graduate work the book begins with free groups actions of free groups on trees algorithmic questions about free groups the ping pong lemma and automorphisms of free groups It goes on to cover several large scale geometric invariants of groups including quasi isometry groups Dehn functions Gromov hyperbolicity and asymptotic dimension It also delves into important examples of groups such as Coxeter groups Thompson's groups right angled Artin groups lamplighter groups mapping class groups and braid groups The tone is conversational throughout and the instruction is driven by examples Accessible to students who have taken a first course in abstract algebra Office Hours with a Geometric Group Theorist also features numerous exercises and in depth projects designed to engage readers and provide jumping off points for research projects

The Compressed Word Problem for Groups Markus Lohrey, 2014-04-04 The Compressed Word Problem for Groups provides a detailed exposition of known results on the compressed word problem emphasizing efficient algorithms for the compressed word problem in various groups The author presents the necessary background along with the most recent results on the compressed word problem to create a cohesive self contained book accessible to computer scientists as well as mathematicians Readers will quickly reach the frontier of current research which makes the book especially appealing for students looking for a currently active research topic at the intersection of group theory and computer science The word problem introduced in 1910 by Max Dehn is one of the most important decision problems in group theory For many groups highly efficient algorithms for the word problem exist In recent years a new technique based on data compression for providing more efficient algorithms for word problems has been developed by representing long words over group generators in a compressed form using a straight line program Algorithmic techniques used for manipulating compressed words has shown that the compressed word problem can be solved in polynomial time for a large class of groups such as free groups graph groups and nilpotent groups These results have important implications for algorithmic questions related to automorphism groups

Global Methods for Combinatorial Isoperimetric Problems L. H. Harper, 2006-05-16 This text explores global methods in combinatorial optimization and is suitable for graduate students and researchers

Algorithmic Problems in Groups and Semigroups Jean-Camille Birget, Stuart Margolis, John Meakin, Mark V. Sapir, 2012-12-06 This volume contains papers which are based primarily on

talks given at an international conference on Algorithmic Problems in Groups and Semigroups held at the University of Nebraska Lincoln from May 11 to May 16, 1998. The conference coincided with the Centennial Celebration of the Department of Mathematics and Statistics at the University of Nebraska Lincoln on the occasion of the one hundredth anniversary of the granting of the first Ph.D. by the department. Funding was provided by the US National Science Foundation, the Department of Mathematics and Statistics, and the College of Arts and Sciences at the University of Nebraska Lincoln through the College's focus program in Discrete, Experimental, and Applied Mathematics. The purpose of the conference was to bring together researchers with interests in algorithmic problems in group theory, semigroup theory, and computer science. A particularly useful feature of this conference was that it provided a framework for exchange of ideas between the research communities in semigroup theory and group theory, and several of the papers collected here reflect this interaction of ideas. The papers collected in this volume represent a cross section of some of the results and ideas that were discussed in the conference. They reflect a synthesis of overlapping ideas and techniques stimulated by problems concerning finite monoids, finitely presented monoids, finitely presented groups, and free groups.

In the Tradition of Thurston II Ken'ichi Ohshika, Athanase Papadopoulos, 2022-08-02. The purpose of this volume and of the other volumes in the same series is to provide a collection of surveys that allows the reader to learn the important aspects of William Thurston's heritage. Thurston's ideas have altered the course of twentieth-century mathematics and they continue to have a significant influence on succeeding generations of mathematicians. The topics covered in the present volume include complex hyperbolic Kleinian groups, Mbius structures, hyperbolic ends, cone 3-manifolds, Thurston's norm, surgeries in representation varieties, triangulations, spaces of polygonal decompositions, and of singular flat structures on surfaces, combination theorems in the theories of Kleinian groups, hyperbolic groups, and holomorphic dynamics, the dynamics and iteration of rational maps, automatic groups, and the combinatorics of right-angled Artin groups.

Infinite Group Theory: From The Past To The Future Paul Baginski, Benjamin Fine, Anthony Gaglione, 2017-12-26. The development of algebraic geometry over groups, geometric group theory, and group-based cryptography has led to there being a tremendous recent interest in infinite group theory. This volume presents a good collection of papers detailing areas of current interest.
