IT and Business Jens Christensen,2000 IT and Business Jens Christensen,2000 Industrialised societies have changed enormously since World War II Business enterprises have laid the foundation for this process as well as adapted to a world where industrialisation and internationalisation have spread rapidly It is probably safe to say that without IT this expansion would not have been possible and the air transport industry has played a substantial and significant role in this development This book follows the development and the interplay between information technology and business during the second part of the twentieth century SAS has been selected as the central theme of this publication because the company being a deeply integrated part of this general development has also been an outstanding representative of business life and especially the revolutionary progress of IT towards globalisation and the Internet towards the turn of the millennium

Global Experience Industries Jens Christensen,2009-08-30 The experience economy is a fourth economic field different from commodities goods and services Experiences are an economic value added to a product or identical with the product When you buy an experience you pay to spend time enjoying a series of memorable events that a company stages to engage the customer in a personal way The experience dimension has moved into a predominant place since the 1990s fueled by an expanding global and digital economy In developed countries people get richer and more individualized and having met all basic materiel needs they focus increasingly on personal development and self realization Demand for experience based products increases such as tourism and sports as well as film music and other contents of media and interactive technologies Furthermore the demand for experience values is extended to include any product and dimension of modern societies such as the design of houses furniture clothes cars computers etc This is not a completely new story Commercial entertainment and design has been around for a century or so And in addition universal values of love sex belief family and the meaning of life have always been vital to human beings What is new is the fact that capitalism is invading more and more fields of experiences connected with emotions and the extension of life proportions In all developed countries and increasingly on a global scale a series of expanding industries have emerged to supply the market with experience oriented goods In this book the business development of markets and industries is covered from tourism to media and entertainment and from design to sex including leading companies and trends in all industries involved *Designing Service Excellence* Brian Hunt,Toni Ivergard,2014-11-13 The moment of truth that instant when consumers experience and judge service quality is often a deciding factor in business success *Designing Service Excellence* People and Technology provides practical information on the design management and organization of many different types of service industries such as hotels restaurants banks and financial institutions retail and the public sector The authors investigate the consumers experience and judgment on service quality which ultimately determines the success or failure of the service They then consider people usability and technology in the automation of high quality service This research driven book identifies service in a variety of forms as an area of

business and management where rapid change is taking place The authors examine how service has become a balance between people and technology and explore this relationship as one of the key drivers of change They discuss how social cultural and technological developments influence the ways in which customers contact negotiate and purchase services from their chosen service providers These same developments are also driving communications between customers relating to the services they buy and are willing to recommend to others or otherwise Intermingled these features of our current day lives have changed the nature of service provision and service use When your organization has its moment of truth how will it measure up Organizations whose business has service at its core and whose activities focus mainly on service design management and delivery are likely to find increasingly that for survival service is a matter of life or death This book provides a deep understanding of the relationship between people and technology along with an ergonomic approach to the design and management of service delivery that helps you deliver the value and benefits that customers not only want but increasingly come to expect

interested in improving processes in everyday business operations The focus is on the implementation of the Six Sigma methodology rather than on the statistical tools and techniques The aim of this book is to provide the reader with some practical and useful guidelines for Six Sigma deployment and its application to transactional and service processes
