Digital Methods and Remote Sensing in Archaeology Maurizio Forte, Stefano Campana, 2017-02-10 This volume debuts the new scope of Remote Sensing which was first defined as the analysis of data collected by sensors that were not in physical contact with the objects under investigation using cameras scanners and radar systems operating from spaceborne or airborne platforms A wider characterization is now possible Remote Sensing can be any non destructive approach to viewing the buried and nominally invisible evidence of past activity Spaceborne and airborne sensors now supplemented by laser scanning are united using ground based geophysical instruments and undersea remote sensing as well as other non invasive techniques such as surface collection or field walking survey Now any method that enables observation of evidence on or beneath the surface of the earth without impact on the surviving stratigraphy is legitimately within the realm of Remote Sensing The new interfaces and senses engaged in Remote Sensing appear throughout the book On a philosophical level this is about the landscapes and built environments that reveal history through place and time It is about new perspectives the views of history possible with Remote Sensing and fostered in part by immersive interactive 3D and 4D environments discussed in this volume These perspectives are both the result and the implementation of technological cultural and epistemological advances in record keeping interpretation and conceptualization Methodology presented here builds on the current ease and speed in collecting data sets on the scale of the object site locality and landscape As this volume shows many disciplines surrounding archaeology and related cultural studies are currently involved in Remote Sensing and its relevance will only increase as the methodology expands *El Estudio* ,1893 *El Perú* Antonio Raimondi,1902
