Information Fusion and Geographic Information Systems Vasily V. Popovich, Manfred Schrenk, Christophe Claramunt, Kyrill V. Korolenko, 2009-04-30 This volume contains the papers presented at the International Workshop Information Fusion and Geographic Information Systems IF GIS 09 held in St Petersburg Russia in May 2009 The workshop was organized by the St Petersburg Institute for Informatics and Automation of the Russian Academy of Sciences SPIIRAS The workshop continues a series organised biannually and attracts academics and industrials

from a wide range of disciplines including computer science geography statistics mathematics hydrography geomorphology and environmental sciences The objective of this workshop is to provide a forum for innovative research oriented towards Geographic Information Science and technologies and Corporate Information Systems whose close association highlight novel theoretical and practical challenges The papers selected by the International Program Committee cover a wide range of innovative areas including ontological and semantic approaches for the representation of geographical data geographical data monitoring situation management and forecast to emerging applications oriented to the maritime environment disaster management and security threats While traditional topics of GIS conferences are well represented and still being advanced several new domains appear and stress the need for the development of versatile monitoring systems and decision making systems While GIS already have a de facto standard for geographical monitoring and analysis the papers accepted in this volume also illustrate several novel directions of application whose objective is more closely oriented to process modeling and decision making and where the nature of the objects represented is revisited using ontological and semantic approaches

**Effective Surveillance for Homeland Security** Francesco Flammini, Roberto Setola, Giorgio Franceschetti, 2013-06-10 Effective Surveillance for Homeland Security Balancing Technology and Social Issues provides a comprehensive survey of state of the art methods and tools for the surveillance and protection of citizens and critical infrastructures against natural and deliberate threats Focusing on current technological challenges involving multi disciplinary prob **Prediction and Recognition of Piracy Efforts Using Collaborative Human-centric Information Systems** Éloi Bossé, Elisa Shahbazian, Galina Rogova, 2013 Maritime piracy is the cause of widespread international concern and the number of pirate attacks has increased substantially in recent years Many commercial vessels are inherently vulnerable to attack because of their size and relative slowness and technological improvements have resulted in smaller crews on large vessels whilst the absence of enforcement agencies in international waters has served only to make pirates more daring Collaborative human centric information support systems can significantly improve the ability of every nation to predict and prevent pirate attacks or to recognize the nature and size of an attack rapidly when prevention fails and improve the collective response to an emergency This book presents the papers delivered at the NATO Advanced Study Institute ASI Prediction and Recognition of Piracy Efforts Using Collaborative Human Centric Information Systems held in Salamanca Spain in September 2011 A significant observation from previous NATO Advanced Study Institutes and Workshops was that domain experts responsible for maritime security were not fully aware of the wide variety of technological solutions available to enhance their support systems and that although technology experts have a general understanding of the requirements in security systems they often lacked knowledge concerning the operational constraints affecting those who implement security procedures This ASI involved both technology and domain experts as well as students from related fields of study It offered an opportunity for them to discuss the issues surrounding the prediction recognition and deterrence of maritime piracy and will be of interest to
