Neumann, 2008-09-10 Vasopressin and oxytocin are the key hormones of the hypothalamo neurohypophysial system and are well known to be critically involved in antidiuresis labor and milk ejection This book highlights the latest research on vasopressin and oxytocin covering multiple biological aspects The capacity of both

hormones to regulate various aspects of social behaviours including pair bonding aggression maternal love and sexual behaviour is a main focus as are their interactions with a variety of other neuromodulators and transmitters Moreover the book illustrates the recent development of vasopressin and oxytocin agonists antagonists as potential drugs to treat not only disturbances of body fluid homeostasis but also mental disorders including social phobia autism anxiety and depression The promising combination of basic and clinical research comprising physiology neuroendocrinology behavioral biology pharmacology imaging and molecular genetics makes this book an essential addition to both experts and scientists new to the field alike Comprehensive review of OXT and AVP physiology and behaviour Each chapter covers a novel aspect of OXT and AVP research and is written by a leading expert Review articles are ideal for experts and newcomers to the field alike Discusses fascinating behavioural effects of oxytocin and vasopressin Summarizes the recent explosion of neuropeptide research physiology and behaviour is in one location

Handbook of Psychopharmacology Leslie Iversen, Solomon H. Snyder, 2013-11-11 Volumes 7 and 8 of the Handbook were published in 1977 In Volume 7 methods for studying unconditioned and conditioned behavior were reviewed Attention was given to both ethological methods and operant conditioning techniques as applied to some selected aspects of behavior Genetic developmental and environmental factors influencing behavior were also discussed In Volume 8 neurotransmitter systems and in particular brain circuits were discussed in relation to behavior and to the effects of psychoactive drugs on behavior The coverage was not exhaustive because of space limitations The topics selected for review were at the time the focus of considerable experimental effort they included homeostasis motivated behaviors sleep locomotion feeding drinking and sexual behavior Brain dopamine systems were therefore discussed in depth since they were already known to be centrally involved in motivated behaviors Learning mechanisms and emotion were reviewed in the remaining chapters In 1984 we initiated an update of behavioral pharmacology to review areas of progress within the same scope as the earlier volumes This update continues in Volume 19 Among the contributions are several that represent important advances in analyzing behavior and the use of more sophisticated methods to define the effect of drugs on particular aspects of behavior The chapters by Blundell on feeding and Miczek on aggression illustrate the sophistication of modern ethopharmacology
