Applied Handbook of Adhesives Technology and Surface Preparation , Handbook of Hot-dip Galvanization Peter Maaß, Peter Peißker, 2011-03-31 Hot dip galvanization is a method for coating steel workpieces with a protective zinc film to enhance the corrosion resistance and to improve the mechanical material properties Hot dip galvanized steel is the material of choice underlying many modern buildings and constructions such as train stations bridges and metal domes Based on the successful German version this edition has been adapted to include international standards regulations and best practices The book systematically covers all steps in hot dip galvanization surface pre treatment process and systems technology environmental issues and quality management As a result the reader finds the fundamentals as well as the most important aspects of process technology and technical equipment alongside contributions on workpiece requirements for optimal galvanization results and methods for applying additional protective coatings to the galvanized pieces With over 200 illustrated examples step by step instructions presentations and reference tables this is essential reading for apprentices and professionals alike

Handbook of Surface Treatments and Coatings Michel Cartier, T. A. Polak, G. D. Wilcox, 2003 Handbook of Surface Treatments and Coatings brings together in a coherent way for the first time as much practical information as possible to help with the selection and appropriate use of surface treatments and coatings in mechanical engineering The selection methods are based

on in service properties and functions required In this way a wealth of knowledge and expertise is made easily accessible to a wide audience including non specialists This is an extremely important title in the Tribology in Practice Series TIPS In order to design and manufacture improved products which have a competitive edge in the global market it is important to be able to produce surfaces that do not wear are more resistant to tarnishing and corrosion and retain their electrical optical or thermal properties over a long period of time It is also of great benefit to be able to simplify product ranges or maintenance requirements make mechanisms lighter reduce noise and enhance the value of strategically or economically advantageous materials It is now universally acknowledged that surface treatments and coatings have a prominent role to play in this respect A number of processes of a mechanical physical chemical or electrochemical nature are used to modify the surface properties of materials in particular their hardness distribution of residual stresses composition and structure topography and surface energy Much information on the subject is difficult to access being very varied in form and content CONTENTS INCLUDE Elements of surface mechanics parameters of frictional contact Further parameters and definitions Principal phenomena or surface transformation and wear The role of surface treatments Properties applications and implementation of surface treatments and coatings Importance of surface treatments and coatings in tribology Classification of surface treatments and coatings Properties and applications of surface treatments and coatings Materials for tribological use Principles of surface treatments and coatings processes Guidelines for selecting and using surface treatments and coatings
