The first two books introduce the solution phase and gas synthesis approaches for nanomaterials providing a number of most widely used protocols for each nanomaterial An exhaustive list of nanomaterials are included which are arranged according to the atomic number of the main element in the compound for easy search For each material the protocols are categorized according to the morphology of the nanostructure A detailed reference is included in each protocol to point the readers to the source of the protocol The third book describes many unconventional methods for the fabrication of nanostructures including lithography and printing self assembly chemical transformation templated synthesis electrospinning laser induced synthesis flame and plasma synthesis and atomic layer deposition processes The fourth book covers the typical methods for structural characterization of nanomaterials including electron diffraction electron microscopy atomic force microscopy scanning tunneling microscopy X ray diffraction in situ and operando X ray techniques X ray absorption fine structure spectroscopy static and dynamic light scattering vibrational characterization methods and NMR spectroscopy In addition to the introduction of the basic operational principles of these tools the book focuses explicitly on how they can be applied for analyzing nanomaterials. The handbook is a complete reference that can provide readers easily accessible information on how to synthesize and characterize nanomaterials desired for their target applications Water-Soluble Synthetic Polymers Philip Molyneux, 2018-01-10 Although several monographs and reviews have appeared on individual polymers of this type and their applications and other technical aspects have also been discussed this is apparently the first book to deal with the physical chemistry of water soluble synthetic polymers as a group This collective survey enables their properties and behaviour to be compared and to be correlated with their molecular structures for predictive purposes However this has made it necessary to critically re appraise much of the

earlier fundamental work so that current discussion of more recent work can be put on ta proper basis Thus of the 1800 or so references cited the middle two thirds related to the twenty year period centred on about 1968 Nevertheless sufficient key recent references have also been included so that the existing state of the art is delineated
