Moed, Wolfgang Glänzel, Ulrich Schmoch, 2006-02-23 This handbook offers a state of the art overview of quantitative science and technology research It focuses on the development and application of indicators derived from data on scientific or scholarly publications and patents It comprises 34 chapters written by leading specialists in the various sub domains These chapters deal with theoretical and methodological issues illustrate applications and highlight their policy context and relevance Authors present a survey of the research topics they address and show their most recent achievements The 34 chapters are arranged into 5 parts Disciplinary Approaches General Methodology The Science System The Technology System and The Science Technology Interface The Editor s Introduction provides a further specification of the handbook s scope and of the main topics addressed in its chapters This handbook aims at four distinct groups of readers practitioners in the field of science and technology studies research students in this field scientists scholars and technicians who are interested in a systematic thorough analysis of their activities policy makers and administrators who wish to be informed about the potentialities and limitations of the various approaches and about their results *Handbook of Quantitative Studies of Science and Technology* A.F.J. van Raan, 2013-10-22 Quantitative studies of science and technology represent the research field of utilization of mathematical statistical and data analytical methods and techniques for gathering handling interpreting and predicting a variety of features of the science and technology enterprise such as performance development and dynamics The field has both strongly developed applied research as well as basic research characteristics The principal purpose of this handbook is to present this wide range of topics in sufficient depth to give readers a reasonably systematic understanding of the domain of contemporary quantitative studies of science and technology a domain which incorporates theory methods and techniques and applications In addressing this domain the handbook aims at different groups of readers those conducting research in the field of science and technology including graduate students and those who are to use results of the work presented in this book *Handbook on Research Assessment in the Social Sciences* Engels, Tim C.E., Kulczycki, Emanuel, 2022-04-19 This Handbook provides a comprehensive overview of current developments issues and good practices regarding assessment in social science research It pays particular attention to the challenges in evaluation policies in the social sciences as well as to the specificities of publishing in the area Measuring Research Cassidy R. Sugimoto, Vincent Larivière, 2018 Policy makers academic administrators scholars and members of the public are clamoring for indicators of the value and reach of research The question of how to quantify the impact and importance of research and scholarly output from the publication of books and journal articles to the indexing of citations and tweets is a critical one in predicting innovation and in deciding what sorts of research is supported and whom is hired to carry it out There is a wide set of data and tools available for measuring research but they are often used in crude ways and each have their own limitations and internal logics *Measuring Research*

What Everyone Needs to Know R will provide for the first time an accessible account of the methods used to gather and analyze data on research output and impact Following a brief history of scholarly communication and its measurement from traditional peer review to crowdsourced review on the social web the book will look at the classification of knowledge and academic disciplines the differences between citations and references the role of peer review national research evaluation exercises the tools used to measure research the many different types of measurement indicators and how to measure interdisciplinarity The book also addresses emerging issues within scholarly communication including whether or not measurement promotes a publish or perish culture fraud in research or citation cartels It will also look at the stakeholders behind these analytical tools the adverse effects of these quantifications and the future of research measurement [A](#)

Vitanov, 2016-08-01 This book deals with methods to evaluate scientific productivity In the book statistical methods deterministic and stochastic models and numerous indexes are discussed that will help the reader to understand the nonlinear science dynamics and to be able to develop or construct systems for appropriate evaluation of research productivity and management of research groups and organizations The dynamics of science structures and systems is complex and the evaluation of research productivity requires a combination of qualitative and quantitative methods and measures The book has three parts The first part is devoted to mathematical models describing the importance of science for economic growth and systems for the evaluation of research organizations of different size The second part contains descriptions and discussions of numerous indexes for the evaluation of the productivity of researchers and groups of researchers of different size up to the comparison of research productivities of research communities of nations Part three contains discussions of non Gaussian laws connected to scientific productivity and presents various deterministic and stochastic models of science dynamics and research productivity The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes which are well known from physics theory of extreme events or population dynamics occur also in the description of dynamics of scientific systems and in the description of the

characteristics of research productivity This is not a surprise as scientific systems are nonlinear open and dissipative

Applied Evaluative Informetrics Henk F. Moed, 2017-09-08 This book presents an introduction to the field of applied evaluative informetrics dealing with the use of bibliometric or informetric indicators in research assessment It sketches the field's history recent achievements and its potential and limits The book dedicates special attention to the application context of quantitative research assessment It describes research assessment as an evaluation science and distinguishes various assessment models in which the domain of informetrics and the policy sphere are disentangled analytically It illustrates how external non informetric factors influence indicator development and how the policy context impacts the setup of an assessment process It also clarifies common misunderstandings in the interpretation of some often used statistics Addressing the way forward the book expresses the author's critical views on a series of fundamental problems in the current use of research performance indicators in research assessment Highlighting the potential of informetric techniques a series of new features is proposed that could be implemented in future assessment processes It sketches a perspective on altmetrics and proposes new lines in longer term strategic indicator research It is written for interested scholars from all domains of science and scholarship and especially for all those subjected to research assessment research students at advanced master and PhD level research managers funders and science policy officials and to practitioners and students in the field **Citation**
