Modern High Temperature Science John L. Margrave, 2012-12-06 It is a great pleasure to have the opportunity to honor our distinguished colleague Professor Leo Brewer on the occasion of his sixty fifth birth day with this special volume of High Temperature Science Leo and his wife Rose are personal friends of several generations of students and postdoctoral researchers at the University of California at Berkeley Their concern and understanding has been important to many of us over the past forty years Each paper in this volume has at least one author who was a graduate student or a postdoctoral researcher in Leo's laboratory at Berkeley The variety of topics is indicative of the wide ranging science done by Brewsterites and by Leo Brewer himself He has personally

participated in the resolution of many of the classical problems of high temperature science from the heat of sublimation of graphite to the dissociation energy of nitrogen to the prediction of binary and ternary phase diagrams He and his students have made major contributions to atomic and molecular spectroscopy He has made significant contributions to the development of efficient systems for energy conversion and to ceramics In addition to his research activities Leo Brewer has been a long time participant in the dynamic undergraduate teaching program of the Berkeley Chemistry Department He has provided crucial insight for students involved in those career shaping experiences that one endures while acquiring the basics of inorganic organic and physical chemistry with that interwoven common bond of thermodynamics

**Surface and Interface Analysis** Rudolf Holze, 2008-10-08 A broad almost encyclopedic overview of spectroscopic and other analytical techniques useful for investigations of phase boundaries in electrochemistry is presented The analysis of electrochemical interfaces and interphases on a microscopic even molecular level is of central importance for an improved understanding of the structure and dynamics of these phase boundaries The gained knowledge will be needed for improvements of methods and applications reaching from electrocatalysis electrochemical energy conversion biocompatibility of metals corrosion protection to galvanic surface treatment and finishing The book provides an overview as complete as possible and enables the reader to choose methods most suitable for tackling his particular task It is nevertheless compact and does not flood the reader with the details of review papers
