With Editorial Commentaries by L. A. DuBridge [and Others]*. Edward Hutchings (ed), **Frontiers of Science** Cameron B. Strang, 2018-06-13 Cameron Strang takes American scientific thought and discoveries away from the learned societies museums and teaching halls of the Northeast and puts the production of knowledge about the natural world in the context of competing empires and an expanding republic in the Gulf South People often dismissed by starched northeasterners as nonintellectuals Indian sages African slaves Spanish officials Irishmen on the make clearers of land and drivers of men were also scientific observers gatherers organizers and reporters Skulls and stems birds and bugs rocks and maps tall tales and fertile hypotheses came from them They collected described and sent the objects that scientists gazed on and interpreted in polite Philadelphia They made knowledge *Frontiers of Science* offers a new framework for approaching American intellectual history one that transcends political and cultural boundaries and reveals persistence across the colonial and national eras The pursuit of knowledge in the United States did not cohere around democratic politics or the influence of liberty It was as in other empires divided by multiple loyalties and identities organized through contested hierarchies of ethnicity and place and reliant on violence By discovering the lost intellectual history of one region Strang shows us how to recover a continent for science **Frontiers in Science, a Survey. With a Editorial Commentaries by L.A.DuBridge and Others** Edward Hutchings, Lee Alvin Dubridge, 1958 **Powering Science** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Large Strategic NASA Science Missions: Science Value and Role in a Balanced Portfolio, 2018-01-29 NASA's Science Mission Directorate SMD currently operates over five dozen missions with approximately two dozen additional missions in development These missions span the scientific fields associated with SMD's four divisions Astrophysics Earth Science Heliophysics and Planetary Sciences Because a single mission can consist of multiple spacecraft NASA SMD is responsible for nearly 100 operational spacecraft The most high profile of these are the large strategic missions often referred to as flagships Large strategic missions are essential to maintaining the global leadership of the United States in space exploration and in science because only the United States has the budget technology and trained personnel in multiple scientific fields to conduct missions that attract a range of international partners This report examines the role of large strategic missions within a balanced program across NASA SMD space and Earth sciences programs It considers the role and scientific productivity of such missions in advancing science technology and the long term health of the field and provides guidance that NASA can use to help set the priority of larger missions within a properly balanced program containing a range of mission classes *Frontiers of Science and Philosophy* Robert G.
