[Efficiency Analysis by Production Frontiers](#) Jati Sengupta,2012-12-06 Measuring productive efficiency for nonprofit organizations has posed a great challenge to applied researchers today The problem has many facets and diverse implications for a number of disciplines such as economics applied statistics management science and information theory This monograph discusses four major areas which emphasize the applied economic and econometric aspects of the production frontier analysis A Stochastic frontier theory B Data envelopment analysis C Clustering and estimation theory D Economic and managerial applications Besides containing an up to date survey of the most recent developments in the field the monograph presents several new results and theorems from my own research These include but are not limited to the following 1 interface with parametric theory 2 minimax and robust concepts of production frontier 3 game theoretic extension of the Farrell and Johansen models 4 optimal clustering techniques for data envelopment analysis and 5 the dynamic and stochastic generalizations of the efficiency frontier at the

micro and macro levels In my research work in this field I have received great support and inspiration from Professor Abraham Charnes of the University of Texas at Austin who has basically founded the technique of data envelopment analysis developed it and is still expanding it My interactions with him have been most fruitful and productive I am deeply grateful to him Finally I must record my deep appreciation to my wife and two children for their loving and enduring support But for their support this work would not have been completed

**The Consistent Preferences Approach to Deductive Reasoning in Games** Geir B. Asheim, 2010-07-07 During the last decade I have explored the consequences of what I have chosen to call the consistent preferences approach to deductive reasoning in games To a great extent this work has been done in cooperation with my co authors Martin Dufwenberg Andres Perea and Ylva Sovik and it has led to a series of journal articles This book presents the results of this research program Since the present format permits a more extensive motivation for and presentation of the analysis it is my hope that the content will be of interest to a wider audience than the corresponding journal articles can reach In addition to active researcher in the field it is intended for graduate students and others that wish to study epistemic conditions for equilibrium and rationalizability concepts in game theory Structure of the book This book consists of twelve chapters The main interactions between the chapters are illustrated in Table 0 1 As Table 0 1 indicates the chapters can be organized into four different parts Chapters 1 and 2 motivate the subsequent analysis by introducing the consistent preferences approach and by presenting examples and concepts that are revisited throughout the book Chapters 3 and 4 present the decision theoretic framework and the belief operators that are used in later chapters Chapters 5 6 10 and 11 analyze games in the strategic form while the remaining chapters Chapters 7 8 9 and 12 are concerned with games in the extensive form

**Computable Foundations for Economics** K. Vela Velupillai, 2012-07-26 Computable Foundations for Economics is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i e set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert

Simon's work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now algorithmically. It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics, game theory and classical behavioural economics.

*Subgame Consistent Cooperation* David W.K. Yeung, Leon A. Petrosyan, 2016-09-23

Strategic behavior in the human and social world has been increasingly recognized in theory and practice. It is well known that non-cooperative behavior could lead to suboptimal or even highly undesirable outcomes. Cooperation suggests the possibility of obtaining socially optimal solutions and the calls for cooperation are prevalent in real life problems. Dynamic cooperation cannot be sustainable if there is no guarantee that the agreed upon optimality principle at the beginning is maintained throughout the cooperation duration. It is due to the lack of this kind of guarantees that cooperative schemes fail to last till its end or even fail to get started. The property of subgame consistency in cooperative dynamic games and the corresponding solution mechanism resolve this classic problem in game theory. This book is a comprehensive treatise on subgame consistent dynamic cooperation covering the up to date state of the art analyses in this important topic. It sets out to provide the theory, solution techniques and applications of subgame consistent cooperation in a wide spectrum of paradigms for analysis which includes cooperative dynamic game models with stochastic state dynamics with uncertain future payoffs with asynchronous players, horizons with random cooperation duration with control spaces switching and with transferable and nontransferable payoffs. The book would be a significant research reference text for researchers in game theory, economists, applied mathematicians, policy makers, corporate decision makers and graduate students in applied mathematics, game theory, decision sciences, economics and management sciences.
