Dalezios,2017-02-15 From the beginning of 21st century there has been an awareness of risk in the environment along with a growing concern for the continuing potential damage caused by hazards In order to ensure environmental sustainability a better understanding of natural disasters and their impacts is essential It has been recognized that a holistic and integrated approach to environmental hazards needs to be attempted using common methodologies such as risk analysis which involves risk management and risk assessment Indeed risk management means reducing the threats posed by known hazards whereas at the same time accepting unmanageable risks and maximizing any related benefits The risk management framework involves evaluating the importance of a risk either quantitatively or qualitatively Risk assessment comprises three steps namely risk identification data base event monitoring statistical inference risk estimation magnitude frequency economic costs and risk evaluation cost benefit analysis Nevertheless the risk management framework also includes a fourth step risk governance i e the need for a feedback of all the risk assessment undertakings There is currently a lack of such feedback which constitutes a serious deficiency in the reduction of environmental hazards This book emphasises methodological approaches and procedures of the three main components in the study of environmental hazards namely forecasting nowcasting before monitoring during and assessment after based on geoinformatic technologies and data and simulation through examples and case studies These are considered within the risk management framework and in particular within the three components of risk assessment namely risk identification risk estimation and risk evaluation This approach is a contemporary and innovative procedure and constitutes current research in the field of environmental hazards *Environmental Hazards Methodologies for Risk Assessment and Management* covers hydrological hazards floods droughts storms hail desertification biophysical hazards frost heat waves epidemics forest fires geological hazards landslides snow avalanches tectonic hazards earthquakes volcanoes and technological hazards This book provides a text and a resource on environmental hazards for senior undergraduate students graduate students on all courses related to environmental hazards and risk assessment and management It is a valuable handbook for researchers and professionals of environmental science environmental economics and management and engineering Editor Nicolas R Dalezios University of Thessaly Greece

Water Requirements for Irrigation and the Environment Marinus G. Bos,R. A. L. Kselik,Richard G. Allen,David Molden,2008-11-23 Irrigated agriculture produces about 40% of all food and fibre on about 16% of all cropped land As such irrigated agriculture is a productive user of resources both in terms of yield per cropped area and in yield per volume of water consumed Many irrigation projects however use divert or withdraw much more water than consumed by the crop The non consumed fraction of the water may cause a variety of undesirable effects ranging from water logging and salinity within

the irrigated area to downstream water pollution This book discusses all components of the water balance of an irrigated area evapotranspiration Ch 2 effective precipitation Ch 3 and capillary rise from the groundwater table Ch 4 Chapter 5 then combines all components into a water management strategy that balances actual evapotranspiration and thus crop yield with the groundwater balance of the irrigated area for a sustainable environment Chapter 6 presents CRIWAR 3.0 a simulation program that combines all water balance components into a single simulation procedure The chapter describes the use of the CRIWAR software for developing water requirement tables and other useful information based on the selected water management strategy This version greatly expands upon the capabilities of previously published programs Frost Protection Richard L. Snyder, 2005 **Agricultural Risk Transfer** Roman Marco Hohl, 2018-12-18 Gain a holistic view of agricultural re insurance and capital market risk transfer Increasing agricultural production and food security remain key challenges for mankind In order to meet global food demand the Food and Agriculture Organisation estimates that production has to increase by 50% by 2050 and requires large investments Agricultural insurance and financial instruments have been an integral part to advancing productivity and are becoming more important in increasingly globalized and specialized agricultural supply chains in the wake of potentially more frequent and severe natural disasters in today's key producing markets Underwriting pricing and transferring agricultural risks is complex and requires a solid understanding of the production system exposure perils and the most suitable products which vastly differ among developed and developing markets In the last decade new insurance schemes in emerging agricultural markets have greatly contributed to the large growth of the industry from a premium volume of US 10.1 billion 2006 to US 30.7 billion 2017 This growth is bound to continue as insurance penetration and exposure increase and new schemes are being developed Agricultural re insurance has become a cornerstone of sovereign disaster risk financing frameworks Agricultural Risk Transfer introduces the main concepts of agricultural re insurance and capital market risk transfer that are discussed through industry case studies It also discusses best industry practices for all main insurance products for crop livestock aquaculture and forestry risks including risk assessment underwriting pricing modelling and loss adjustment Describes agricultural production risks and risk management approaches Covers risk transfer of production and financial risks through insurance and financial instruments Introduces modelling concepts for the main perils and key data sources that support risk transfer through indemnity and index based products Describes risk pricing and underwriting approaches for crop livestock aquaculture and forestry exposure in developed and developing agricultural systems Become familiar with risk transfer concepts to reinsurance and capital markets Get to know the current market landscape and main risk transfer products for individual producers agribusinesses and governments through theory and comprehensive industry case studies Through Agricultural Risk Transfer you'll gain a holistic view of agricultural re insurance and capital market solutions which will support better underwriting more structured product development and improved risk transfer Satellite Remote Sensing and the Management of

Natural Resources Nathalie Pettorelli, 2019-05-16 The ability to anticipate the impacts of global environmental changes on natural resources is fundamental to designing appropriate and optimised adaptation and mitigation strategies. However, this requires the scientific community to have access to reliable large scale information on spatio temporal changes in the distribution of abiotic conditions and on the distribution structure composition and functioning of ecosystems. Satellite remote sensing can provide access to some of this fundamental data by offering repeatable standardised and verifiable information that is directly relevant to the monitoring and management of our natural capital. This book demonstrates how ecological knowledge and satellite based information can be effectively combined to address a wide array of current natural resource management needs. By focusing on concrete applied examples in both the marine and terrestrial realms, it will help pave the way for developing enhanced levels of collaboration between the ecological and remote sensing communities, as well as shaping their future research directions. Satellite Remote Sensing and the Management of Natural Resources is primarily aimed at ecologists and remote sensing specialists, as well as policy makers and practitioners in the fields of conservation biology, biodiversity monitoring and natural resource management.

**Adapting Agriculture to Climate Change** Chris Stokes, Mark Howden, 2010 A fundamental resource for preparing Australia's primary industries for the challenges and opportunities of climate change for primary industry professionals, land managers, policy makers, researchers and students.

**Cultivation for Climate Change Resilience, Volume 2** Adel A. Abul-Soad, Jameel M. Al-Khayri, 2023-03-31 This book focuses on various tropical fruit tree species management for climate change, including mitigation strategies and technological countermeasures taken by researchers, progressive growers and commercial companies to overcome the adverse changes. It can be considered as a unique source emphasizing the fruit species solitary, not by subject as usual, to enable readers reaching directly to their crop of interest. The content includes genetic resources, conservation, remote sensing and environmental certification. Increasing attention of society toward information and measures taken by various stakeholders about climate change risks and threats makes this book very timely. Key points: Provides a contemporary view of the impact of climate change on cultivation of individual fruit species; Offers modern approaches for mitigating the adverse impact of climate change on fruits cultivation; Describes research progress of understanding and combating the impact of climate change on fruits production; Illustrates presented concepts with relevant figures and tabulated data.

**Remote Sensing of Hydrometeorological Hazards** George P. Petropoulos, Tanvir Islam, 2017-11-02 Extreme weather and climate change aggravate the frequency and magnitude of disasters. Facing atypical and more severe events, existing early warning and response systems become inadequate both in scale and scope. Earth Observation (EO) provides today information at global, regional and even basin scales related to agrometeorological hazards. This book focuses on drought, flood, frost, landslides and storms, cyclones and covers different applications of EO data used from prediction to mapping damages, as well as recovery for each category. It explains the added value of EO technology in comparison with conventional techniques applied today.

through many case studies      **The Normalized Difference Vegetation Index** Nathalie Pettorelli, 2013-10-10 There has been a recent surge of interest in remote sensing and its use in ecology and conservation but this is the first book to focus explicitly on the NDVI Normalised Difference Vegetation Index a simple numerical indicator and powerful tool that can be used to assess spatio temporal changes in green vegetation The NDVI opens the possibility of addressing questions on scales inaccessible to ground based methods alone it is mostly freely available with global coverage over several decades This novel text provides an authoritative overview of the principles and possible applications of the NDVI in ecology environmental and wildlife management and conservation NDVI data can provide valuable information about temporal and spatial changes in vegetation distribution productivity and dynamics allowing monitoring of habitat degradation and fragmentation or assessment of the ecological effects of climatic disasters such as drought or fire The NDVI has also provided ecologists with a promising way to couple vegetation with animal distribution abundance movement survival and reproductive parameters Over the last few decades numerous studies have highlighted the potential key role of satellite data and the NDVI in macroecology plant ecology animal population dynamics environmental monitoring habitat selection and habitat use studies and paleoecology The chapters are organised around two sections the first detailing vegetation indices and the NDVI the principles behind the NDVI its correlation with climate the available NDVI datasets and the possible complications and errors associated with the use of this satellite based vegetation index The second section discusses the possible applications of the NDVI in ecology environmental and wildlife management and conservation      *Land Cover Classification System* Antonio Di Gregorio, Food and Agriculture Organization of the United Nations, 2005-01-01 CD ROM is software version 2
