Bernard Carlson,Erik M Conway,2024-01-08 This book drawing on fresh scholarship investigates electrification in new places
and across different time periods While much of our understanding of electrification as a historical process is based on the
seminal work done by Thomas P Hughes in *Networks of Power* 1983 the scholars in this volume expand and revise Hughes
systems approach to suggest that electrification is a heterogeneous and contingent process Moreover the contributors
suggest that the conquest of the world by electricity remains incomplete despite more than a century elapsing Above all
though this book provides context for thinking about what lies ahead as humans continue their conquest of the earth through
electricity As we become increasingly dependent on electricity to power our lights heat and cool our homes turn the wheels
of industry and keep our information systems humming so we are ever more vulnerable when the grid runs into trouble
