Drugs and pharmaceutical industry plays a vital role in the economic development of a nation. It is one of the largest and most advanced sectors in the world acting as a source for various drugs, medicines and their intermediates as well as other pharmaceutical formulations. India has come a long way in this field from a country importing more than 95% of its requirement of drugs and pharmaceuticals. India now is exporting it even to developed countries. Being the intense knowledge driven industry, it offers innumerable business opportunities for the investors corporate the world over. The existence of well defined and strong pharmaceutical industry is important for promoting and sustaining research and developmental efforts and initiatives in an economy as well as making available the quality medicines to all at affordable prices. That is, it is essential to improve the health status of the individuals as well as the society as a whole so that positive contributions could be made to the economic growth and regional development of a country. On the global platform, India holds fourth position in terms of volume and thirteenth position in terms of value of production in pharmaceuticals. The pharmaceutical industry has been producing bulk drugs belonging to all major therapeutic groups requiring complicated manufacturing processes as well as a wide range of pharmaceutical machinery and equipments. The modern Indian Pharmaceutical Industry is recent and its foundation was laid in the beginning of the current century. The pharmaceutical industry can be broadly categorised as bulk drugs formulations, IV fluids and pharmaceutical aids such as medical equipment, hospital disposables, capsules etc. Special feature of the pharmaceutical industry is a large number of manufacturers in the small scale sector. The government is also encouraging the SSI sector providing some incentives. The recent developments in the technology and R D work in this field have led to the increased growth rate of industries and have established Indian Pharmaceutical industries in the international market. The content of the book includes information about properties, general methods of analysis, methods of manufacture of different types of drugs and pharmaceuticals. Some of the fundamentals of the book are polymeric materials used in drug delivery systems, theoretical aspects of friction and lubrication, a convenient method for conversion of quinine to quinidine formulation and evaluation of bio available enteric coated erythromycin and metronidazole tablets, extraction of virginiamycin, antipyretics and analgesics, column chromatographic assay of aspirin tablets, differentiating titration of phenacetin and caffeine, infrared spectra of some compounds of pharmaceutical interest etc. This book covers an intensive study on manufacturing, production, formulation and quality control of drugs and pharmaceuticals with technology involved in it. This book is an invaluable resource for technologists, professionals and those who want to venture in this field.

A Reference Handbook of the Medical Sciences Embracing the Entire Range of Scientific and Practical Medicine and Allied Science , 1900 Reversing Your Hair Loss - A Practical Scientific Guide Robert J. Hall, 2013-12-08 It is a sad fact that we will all lose our hair at some stage even if only through old age The real problem is when it happens to us before then Very few people have any clear idea why premature thinning and loss occurs but collectively we spend an extraordinary amount to try and reverse it The hair restoration industry is worth more than ten billion US dollars per year Yet the alarming truth is that there is little to no regulation of the industry and most of the cures simply do not work If you are concerned about your hair loss and it does not matter whether you are young or old male or female completely bald or just thinning then this book will almost certainly help you The first few chapters deal with hair itself what it is and how it grows Armed with the facts you can immediately start sorting truth from fiction regarding products and services The second section deals with actual hair loss From what we read and what we are told we are generally led to believe that hair loss is a

single time driven linear process that is as inevitable as it is simple The truth is though that it most certainly none of these Again some parts may surprise you whilst others may even shock you The last part deals with restoring your hair Outlined in these chapters are therapies and supplements that can replace the current drug treatments on offer Other therapies are highlighted that if added to your existing routine could make significant improvements to your overall strategy Lastly some of the therapies suggested have success rates touching over ninety percent just by themselves The very last chapter of the book highlights companies offering treatments that will be available in the very near future These treatments promise complete regeneration of your hair however long you may have been bald
