Handbook On Architectures Of Information Systems:

Handbook on Architectures of Information Systems Peter Bernus, Kai Mertins, Gunter Schmidt, Pri, 2016-05-01 This book is the first volume of a running series under the title International Handbooks on Information Systems The series is edited by Peter Bernus Jacek Blazewicz Gunter Schmidt and Mike Shaw One objective is to give state of the art surveys on selected topics of information systems theory and applications To this end a distinguished international group of academics and practitioners are invited to provide a reference source not only for problem solvers in business industry and government but also for professional researchers and graduate students It seemed appropriate to start the series with a volume covering some basic aspects about information systems The focus of the first volume is therefore architectures It was decided to have a balanced number of contributions from academia and practitioners The structure of the material follows a differentiation between modelling languages tools and methodologies These are collected into separate parts allowing the reader of the handbook a better comparison of the contributions Information systems are a major component of the entire enterprise and the reader will notice that many contributions could just as easily have been included in another volume of the series which is on enterprise integration Conversely some traditionally information systems topics as organisational analysis and strategic change management methods will be treated in more depth in the Handbook on Enterprise Integration The two volumes will complement each other

Handbook on Architectures of Information Systems Peter Bernus, 2006 An authoritative source about methods languages methodologies and supporting tools for constructing information systems that also provides examples for references models Its strength is the careful selection of each of the above mentioned components based on technical merit The second edition completely revises all articles and features new material on the latest developments in XML UML The structure follows the definition of the major components of Enterprise Integration as defined by GERAM Generalised Enterprise Reference Architecture and Methodology 1st edition sold about 600 copies since January 2003

The New Navigators Robert Baud, 2003 The extensive use of the web by patients and laymen for health information challenges us to build information services that are easily accessible and trustworthy The evolution towards a semantic web is addressed and papers covering all the fields of biomedical informatics are also included Ed

Maciaszek, Michele Missikoff, Michael Parkin, 2012-08-09

The next generation of Business Process Management BPM methods and tools will support the development of a new generation of service enabled applications that change and evolve over time The trend is moving from relatively stable organization specific applications to dynamic ones supporting business processes This book is an outcome of the International Workshop on Business System Management and Engineering BSME 2010 held in Malaga Spain in June July 2010 in conjunction with the TOOLS 2010 federated conferences and under the aegis of the EU Network of Excellence on Service Software and Systems S Cube The goal of the workshop was to bring together experts in the fields of business process management service oriented architectures and service security to discuss the current state of research and identify new issues challenges and research directions The results of these discussions are reflected in this book *Software Applications: Concepts, Methodologies, Tools, and Applications* Tiako, Pierre F.,2009-03-31 Includes articles in topic areas such as autonomic computing operating system architectures and open source software technologies and applications

Enterprise Architecture, Integration and Interoperability Peter Bernus,Guy Doumeingts,Mark Fox,2010-08-23 Enterprise Architecture Integration and Interoperability and the Networked enterprise have become the theme of many conferences in the past few years These conferences were organised by IFIP TC5 with the support of its two working groups WG 5 12 Architectures for Enterprise Integration and WG 5 8 Enterprise Interoperability both concerned with aspects of the topic how is it possible to architect and implement businesses that are flexible and able to change to interact and use one another s s vices in a dynamic manner for the purpose of joint value creation The original qu tion of enterprise integration in the 1980s was how can we achieve and integrate formation and material flow in the enterprise Various methods and reference models were developed or proposed ranging from tightly integrated monolithic system chitectures through cell based manufacturing to on demand interconnection of bu nesses to form virtual enterprises in response to market opportunities Two camps have emerged in the endeavour to achieve the same goal namely to achieve interoperability between businesses whereupon interoperability is the ability to exchange information in order to use one another s s services or to jointly implement a service One school of researchers addresses the technical aspects of creating dynamic and static interconnections between disparate businesses or parts thereof Viewpoint-based Flexible Information System Architectures Dmitri Valeri Panfilenko,2021-06-07 Information system architecture ISA specification as a part of software engineering field has been an information systems research topic since the 60 s of the 20th century There have been manifold specification methodologies over the recent decades developed newly or adapted in order to target the domains of software modelling legacy systems steel production and automotive safety Still there exist considerable issues constituting the need for a flexible ISA development e g incomplete methodology for requirements in model driven architectures lacking qualitative methods for thorough definition and usage of viewpoints Currently existing methods for information system architecture specification usually de vise the target architectures either addressing only a part of software life cycles or

neglecting less structured information The method for flexible information system architectures FISA specification uses the viewpoint concept for mediating the domain expert and technical system levels The FISA method defines construction and application reference models based on the ANSI IEEE Standard 1471 2000 viewpoints with model transformations based on OMG Standard Model Driven Architecture MDA and four different approaches for ISA specification thus providing for flexibility both in construction and refactoring procedures The development of FISA method has been based on a thorough analysis of the ISA specification method field and constructs a comprehensive procedure and reference engineering models for flexible ISA specification The genericity of the conceived construction and application procedure models of FISA allows for its usage not only in research but also in industry settings as presented on illustrative scenarios in steel manufacturing and automotive safety *Virtual Enterprises and Collaborative Networks* Luis M. Camarinha-Matos, 2006-04-10

Collaborative Network Organizations CNO corresponds to a very active and steadily growing area For instance Virtual enterprises Virtual Organizations PVC suggest new ways of work and put the emphasis on collaborative networks of human actors Further to these main lines other collaborative forms and patterns of collaborative behavior are emerging not only in industry but also in service sector as well as governmental and non government social organizations e g the collaborative networks for rescue tasks in disaster situations time bank organizations etc The concept of breeding environment is now understood as a fundamental entity to enable dynamic collaborative organizations *Enterprise Interoperability VI* Kai Mertins, Frédéric Bénében, Raúl Poler, Jean-Paul Bourrières, 2014-02-19 In 2007 INTEROP VLab defined Enterprise Interoperability as the ability of an enterprise system or application to interact with others at a low cost with a flexible approach Enterprise Interoperability VI brings together a peer reviewed selection of over 40 papers ranging from academic research through case studies to industrial and administrative experience of interoperability It shows how in a scenario of globalised markets the capacity to cooperate with other firms efficiently becomes essential in order to remain in the market in an economically socially and environmentally cost effective manner and that the most innovative enterprises are beginning to redesign their business model to become interoperable This goal of interoperability is vital not only from the perspective of the individual enterprise but also in the new business structures that are now emerging such as supply chains virtual enterprises interconnected organisations or extended enterprises as well as in mergers and acquisitions Establishing efficient and relevant collaborative situations requires managing interoperability from a dynamic perspective a relevant and efficient collaboration of organizations might require adaptation to remain in line with potentially changing objectives evolving resources and unexpected events for example Many of the papers contained in this the seventh volume of Proceedings of the I ESA Conferences have examples and illustrations calculated to deepen understanding and generate new ideas The I ESA 14 Conference is jointly organised by Ecole des Mines Albi Carmaux on behalf of PGSO and the European Virtual Laboratory for Enterprise Interoperability INTEROP VLab and supported by the International Federation for

Information Processing IFIP A concise reference to the state of the art in systems interoperability Enterprise Interoperability VI will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment **Information Security Architecture** Jan Killmeyer, 2000-09-25 An information security architecture is made up of several components Each component in the architecture focuses on establishing acceptable levels of control These controls are then applied to the operating environment of an organization Functionally information security architecture combines technical practical and cost effective solutions t **On the Move to Meaningful Internet Systems: OTM 2011 Workshops** Robert

Digital Transformation of Enterprise Architecture Vivek Kale, 2019-07-08 In this book Vivek Kale makes an important contribution to the theory and practice of enterprise architecture this book captures the breadth and depth of information that a modern enterprise architecture must address to effectively support an agile enterprise This book should have a place in every practicing architect's library John D McDowall Author of Complex Enterprise Architecture Digital Transformation of Enterprise Architecture is the first book to propose Enterprise Architecture EA as the most important element after Business Models for digital transformation of enterprises This book makes digital transformation more tangible by showing the rationale and typical technologies associated with it and these technologies in turn reveal the essence of digital transformation This book would be useful for analysts designers and developers of future ready agile application systems This book proposes that it is the perennial quest for interoperability portability scalability availability etc that has directed and driven the evolution of the IT IS industry in the past 50 years It is this very quest that has led to the emergence of technologies like service oriented cloud and big data computing In addition to the conventional attributes of EA like

interoperability scalability and availability this book identifies additional attributes of mobility ubiquity security analyticity and usability This pragmatic book Identifies three parts effort for any digital transformation Business Models Enterprise Architectures and Enterprise Processes Describes eight attributes of EA interoperability scalability availability mobility ubiquity security analyticity and usability Explains the corresponding technologies of service oriented cloud big data context aware Internet of Things IoT blockchain soft and interactive computing Briefs on auxiliary technologies like integration virtualization replication spatio temporal databases embedded systems cryptography data mining and interactive interfaces that are essential for digital transformation of enterprise architecture Introduces interactive interfaces like voice gaze gesture and 3D interfaces Provides an overview of blockchain computing soft computing and customer interaction systems Digital Transformation of Enterprise Architecture proposes that to withstand the disruptive digital storms of the future enterprises must bring about digital transformation i e a transformation that affects an exponential change amplification or attenuation in any aspect of the constituent attributes of EA It proposes that each of these technologies service oriented cloud big data context aware IoT blockchain soft and interactive computing bring about digital transformation of the corresponding EA attribute viz interoperability scalability availability mobility ubiquity security analyticity and usability

The Practice of Enterprise Modeling Estefanía Serral, Janis Stirna, Jolita Ralyté, Jānis Grabis, 2021-11-10 This book constitutes the proceedings papers of the 14th IFIP Working Conference on the Practice of Enterprise Modeling held in Riga Latvia during November 24-26 2021 PoEM offers a forum for sharing experiences and knowledge between the academic community and practitioners from industry and the public sector This year the theme of the conference is the use of enterprise modeling and enterprise architecture towards ensuring sustainability and resilience of enterprises and societies The 14 full and 6 short papers presented in this volume were carefully reviewed and selected from a total of 47 submissions They were organized in topical sections named enterprise modeling and enterprise architecture enterprise modeling methods and method engineering business process modeling and management requirements engineering for privacy security and governance and case studies and experiences

Knowledge Sharing in the Integrated Enterprise Peter Bernus, Mark Fox, 2006-03-09 Enterprise Architects in their endeavor to achieve Enterprise Integration have limited guidance on how best to use Enterprise Models and Modeling Tools to support their practice It is widely recognized that the practice of engineering enterprises needs a number of models but how to maintain the relation between these models with ease is still a problem Model interoperability is an issue on multiple counts How to interchange models between enterprise modeling tools How to maintain the interdependencies between models whether they describe the enterprise on the same level but from different points of view or from the same point of view but on different levels of abstraction and granularity How to maintain a coherent and evolving set of enterprise models in support of continuous change processes How to use and reuse enterprise models as a knowledge resource The answers to these questions are of great importance to anyone who is

implementing ISO9001 2000 requirements whether through using enterprise architecture practice or not although it can be argued that a well executed architecture practice should satisfy ISO9001 without additional effort This volume attacks the problem on three fronts 1 Authors working in international standardisation and tool development as well as in enterprise modeling research present the latest developments in semantic integration 2 Authors who are practitioners of or conducting active research in enterprise architecting methodologies give an account on the latest developments and strategic directions in architecture frameworks and methodologies 3 Authors who use or develop information integration infrastructures present best practice and future trends of this aspect of enterprise integration Chapters of this book include contributions to the International Conference on Enterprise Integration and Modelling Technology ICEIMT 04 and those presented at the Design of Information Infrastructure Systems for Manufacturing DIISM 04 Workshop While DIISM is traditionally oriented at supporting manufacturing practice the results have a far greater domain of applicability

Exploration of Practices and Challenges in Enterprise Architecture Hope, Thomas, 2025-05-08 Enterprise architecture EA serves as a strategic framework that aligns an organization's business goals with its IT infrastructure enabling more effective decision making streamlined processes and agile adaptation to change As businesses face rapid digital transformation globalization and complexity in operations EA becomes a critical tool for achieving organizational coherence and resilience Implementing and maintaining EA practices comes with some challenges From securing stakeholders to managing new technologies and ensuring alignment across businesses organizations must navigate a range of technical organizational and cultural challenges *Exploration of Practices and Challenges in Enterprise Architecture* delves into the core practices of enterprise architecture for business governance It examines the key challenges that impact its successful adoption and sustainability in dynamic business environments This book covers topics such as e business software engineering and organizational development and is a useful resource for computer engineers business owners academicians researchers and scientists

Collaborative Networks and Their Breeding Environments Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Angel Ortiz, 2005-08-31 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger theoretical foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the

challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05 held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks
