Endocrinology as a discipline was a late arrival in the corpus of established subjects Its growth in recent years has been prodigious extending from morphology to molecular levels Most of the major endocrine glands were noted by the early anatomists although the adrenal glands were not described until 1563 by Bartholomaeus Eustachius 1520 1574 On the other hand elucidation of the function of these glands was extremely slow Key work by A A Berthold 1849 although overlooked at the time showed that comb atrophy in castrated fowl was prevented by testis transplantation The idea that glands produced substances reaching the bloodstream directly and not via excretory ducts stemmed from Claude Bernard who first used the term internal secretion in 1855 The clinical observations of Thomas Addison at Guy's Hospital published as a monograph in 1855 entitled *The Constitutional and Local Effects of Disease of the Suprarenal Capsules* were seminal However the stimulus of this early research did not bring immediate widespread further investigations Upon the discovery of secretin in 1902 Bayliss and Starling considered the term internal secretion to be clumsy and the term hormone was coined from OQ UW 1 excite or arouse and it was first used by Starling in his Croonian of 1905 Mammalian Neuroendocrinology Paul V. Malven, 2019-08-20 *Mammalian Neuroendocrinology* presents a concise examination of how the nervous and endocrine systems interact to regulate physiological processes Selected experimental results are presented to illustrate the current understanding of neuroendocrine processes Neural influences and endocrine feedback mechanisms related to the secretion of adeno-hypophysial hormones are summarized for each hormone The book's concise nature and readable style are highly suited for use as a graduate textbook There are also chapters devoted to each of the following topics neurohypophysis pineal gland adrenal medulla hormones and behavior and neuroendocrine immunology Comparisons are made among species of mammals including laboratory rodents domesticated ungulates and primates Agricultural and/or clinical aspects relevant to these topics are covered when appropriate *Mammalian Neuroendocrinology* is excellent for students and professionals in neuroendocrinology neuroscience endocrinology reproduction studies and animal sciences **Adrenergic Activators and Inhibitors**, 2012-12-06 Not much more than a decade has passed since the appearance of the outstanding handbook *Catecholamines* edited by BLASCHKO and MUSCHOLL in the series *Handbook of Experimental Pharmacology* However this extremely well organized volume dealt mainly with the origin molecular actions and fate of the naturally occurring catecholamines It was felt that a separate volume should be dedicated to the remarkable and exciting progress made in the field of agents influencing the adrenergic system both in physiologic and pharmacologic respect The editor of the present volume considers himself lucky to have been able to persuade a number of eminent specialists to collaborate The main concept of the present handbook is a systematic approach to the various effects of adrenergic activators and inhibitors starting with the chemistry and structure activity relationship followed by the evaluation of adrenergic activators and

inhibitors and discussing their mode of action The most voluminous part is the chapter dealing with the systemic pharmacology of these agents analyzing the effects on the central nervous system on the autonomic nervous system on the cardiovascular the respiratory the digestive the endocrine system on the skeletal muscle and on metabolism Kinetics and bio transformation further toxic effects are discussed in the following chapters A special chapter on clinical features concludes the monograph

Adrenal Disease in Childhood I. A. Hughes, Adrian J. L. Clark, 2000-01-01 Adrenal disease in children poses an immensely difficult diagnostic and management problem for the paediatrician in view of the large number of rare pathologies that may present in this way This volume brings together the expertise of the acknowledged leaders in specific adrenal disorders to provide a readily accessible text that combines a detailed description of the molecular origins of these diseases as they are currently understood with a unique account of the clinical features and therapeutic options Beginning with disorders that primarily affect adrenal development and progressing towards the defects that interfere with steroid production the reader gains considerable insight into the normal physiology of the adrenal cortex particularly as revealed by clinical disorders The major contributions of modern biochemistry and molecular genetics in our current understanding are visible throughout providing a unique overview of adrenocortical biology This book is of great interest to general pediatricians paediatric endocrinologists adult endocrinologists clinical geneticists and basic scientists working in areas such as developmental biology and molecular steroidogenesis

*Progress in Radiopharmacology 3* P.H. Cox, 2012-12-06 The publication of this volume which is based upon presentations made to the Third European Symposium on Radiopharmacology at Noordwijkerhout April 22 24 1982 is indicative of the continued interest in this sub branch of Nuclear Medicine The transactions of the first two meetings were published as *Progress in Radiopharmacology Volumes 1 and 2* by Elsevier North Holland Bio medical Press We are particularly pleased to have reached an agreement with Martinus Nijhoff Publishers to include *Progress in Radiopharmacology 3* in the series *Developments in Nuclear Medicine* This not only ensures the continuity of the series but by including it in a series of Nuclear Medical Monographs the availability of the text to more general readers for background information is greatly enhanced As with the previous two volumes each of the three topics has been so treated as to relate the biodistribution of the radiopharmaceuticals to normal and pathophysiological conditions to provide background information for the practising nuclear medical specialist Special attention has been given to European activities but these have been clearly placed in context in relation to developments from outside Europe The Third European Symposium on Radiopharmacology was held under the auspices of the European Joint Committee on Radiopharmaceuticals of the European Nuclear Medicine Society and the Society of Nuclear Medicine Europe Solco Nuclear Basle provided both financial and material support and I would like to thank Dr M de Schrijver Mr I Waser and Mrs E Rufenacht for their continued help and encouragement

Reproductive Processes and Contraception Kenneth W. McKerns, 2013-03-13 This monograph represents the

eighth sponsored by the International Society for Biochemical Endocrinology The topics should be of interest to basic research scientists medical practitioners and students of reproductive biology It complements our monograph published in 1979 on Structure and Function of the Gonadotropins The monograph is organized in ten topic areas relative to the general theme of reproduction and contraception There are several chapters in each area Obviously all aspects of each area could not be covered An attempt was made to seek interesting basic research ideas and concepts that might in the future be applicable to fertility regulation The topics are interactions in gonadotropin regulation GnRH analogues as contraceptive agents receptors in cellular localization of hormones uterine and mammary receptors germ cell regulation and secretory proteins control mechanisms and metabolic regulations hCG peptides and anti sera as antifertility agents ieutization oocyte maturation and early pregnancy steroids and cell growth and finally prostaglandins and cell function The studies encompass many disciplines and techniques in anatomy physiology biochemistry and endocrinology in animals and humans both in vitro and in vivo A conference of contributors was held in Maine at the Asticou Inn in Northeast Harbor during the week of September 9-13 1979 The chapters as written for the monograph were presented for discussion by the participants who were selected for their knowledge of and contributions to this area of scientific investigation

**Endocrine Pharmacology** P. J. Bentley, 1980 A 1981 treatment of the action and uses of the hormones and drugs that influence endocrine functions in the body as seen by a pharmacologist The book includes a description of available drug preparations and expected therapeutic responses and an examination of their side effects and interactions with other drugs Special emphasis is placed on how such drugs and hormones work and on how their biological effects are related to their chemical structures The physiological background to the practical significance of such substances is given for both a healthy and a diseased state The book assumes little prior knowledge of endocrinology or pharmacology

**Hormones and Energy Metabolism** D. M. Klachko, 2013-11-11 The Twelfth Annual Midwest Conference on Endocrinology and Metabolism continued the tradition of selecting a topic of interest to a wide variety of scientists with interests in biology The conference on Hormones and Energy Metabolism was dedicated appropriately to Dr Samuel A Brody a leader in research in this field as described by Professor Johnson in this volume A particular feature of these conferences has been the large proportion of time devoted to discussion of each paper and the published proceedings have included edited transcripts of these discussions Unfortunately due to malfunction of the recording system major portions of the discussions were lost and despite much effort insufficient was salvageable to be meaningful and helpful Consequently the editors decided to omit completely the discussions except for a communication provided by Dr Woodside We again express our appreciation to the staff of Conferences and Short Courses University of Missouri Columbia Extension Division and especially to Dr John Swanson who helped organize the multitude of administrative details to Mrs Linda Bennett CPS for her continuing excellent efforts in typing the manuscripts for publication and particularly to the sponsors without

whom there would have been no conference Ralph R Anderson f Murray Heimberg David r Klachko vii CONTENTS Dedication Dr Samuel A Brody xi Brody Memorial Lecture Same Aspects of Energy Coupling by Mitochondria

**Calcium and Cellular Secretion** Ronald P. Rubin, 2012-12-06 Since the publication of my previous monograph in 1974 important progress has been made in the broad area of calcium research particularly as it pertains to secretory phenomena The significant advance in methodology while widening the scope of our knowledge has caused research in this particular area to become more and more specialized It has therefore become increasingly difficult for researchers to consider and evaluate work outside their own areas of specialization and to comprehend the field from a broad perspective While many valuable reviews on the importance of calcium in cellular function are being produced they have not attempted to pull together all of the existing knowledge into a more general narrative This volume brings together experimental data and theories from diverse sources and attempts to synthesize into a broad conceptual framework the massive amount of specialized information that presently exists in the general area of calcium metabolism and the secretory process It is impossible in a book of this length to discuss specific references in detail and still maintain readability so generalizations must be made

**Biological Rhythms** Jurgen Aschoff, 2013-03-09 Interest in biological rhythms has been traced back more than 2500 years to Archilochus the Greek poet who in one of his fragments suggests i VWO KE o olos pv J tos txv pW7rOVS XH recognize what rhythm governs man Aschoff 1974 Reference can also be made to the French student of medicine J J Virey who in his thesis of 1814 used for the first time the expression horloge vivante living clock to describe daily rhythms and to D C W Hufeland 1779 who called the 24 hour period the unit of our natural chronology However it was not until the 1930s that real progress was made in the analysis of biological rhythms and Erwin Bunning was encouraged to publish the first and still not outdated monograph in the field in 1958 Two years later in the middle of exciting discoveries we took a breather at the Cold Spring Harbor Symposium on Biological Clocks Its survey on rules considered valid at that time and Pittendrigh's anticipating view on the temporal organization of living systems made it a milestone on our way from a more formalistic description of biological rhythms to the understanding of their structural and physiological basis

**Monoamine Oxidase and its Inhibition** G. E. W. Wolstenholme, Julie Knight, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

**Hormonal Steroids** V. H. T. James, J. R. Pasqualini, 2013-10-22 Hormonal Steroids presents the proceedings of the Sixth International Congress on Hormonal Steroids held in Jerusalem Israel in September 1982 The book covers a wide range of topics on the field of hormonal steroids research The topics discussed include the history of steroid protein interaction enzyme induction by estrogen steroids and the immune system correlative morphological and biochemical investigations on the stromal tissue of the human prostate analysis of

intact steroid conjugates by secondary ion mass spectrometry including fabms and by gas chromatography and the role of lipoproteins in steroidogenesis by human luteinized granulosa cells in culture Biochemists pathologists pharmacologists and medical and pharmaceutical researchers will find the book a good source of insight      **Basic Medical Endocrinology** Elizabeth H. Holt, Harry E. Peery, 2010-07-28 Basic Medical Endocrinology Fourth Edition provides up to date coverage of rapidly unfolding advances in the understanding of hormones involved in regulating most aspects of bodily functions Topics are approached from the perspective of a physiologist with over 40 years of teaching experience This fourth edition is richly illustrated in full color with both descriptive schematic diagrams and laboratory findings obtained in clinical studies Each of the fourteen chapters starts with an overview of the topic and ends with a Suggested Reading list Initial chapters lay a foundation by presenting basic information and principles of hormone structure secretion and actions and the physiological roles of the principal endocrine glands Subsequent chapters address the role of the endocrine system in solving such physiological problems as the regulation of the volume and composition of body fluids in the face of changing environmental demands and the regulation of short and long term energy balance The final chapters deal with the indispensable role of hormones in growth development and reproduction Strikes an excellent balance between systems organismal level of overview and cellular molecular analysis Richly illustrated with over 250 full color figures descriptive schematic diagrams and laboratory findings All chapters have been thoroughly rewritten and updated including new discussions of adrenal steroid biosynthesis the parathyroid in osteoporosis obesity and metabolism as well as an entirely new chapter on gastrointestinal hormones Editor has 45 years of experience teaching endocrinology and physiology to medical students at Harvard and UMass      **Glial-Neuronal Communication in Development and Regeneration** Hans H. Althaus, Wilfried Seifert, 2013-06-29 This comprehensive volume is a contribution to a new series initiated by the NATO Panel on Gell to Gell Signals in Plants and Animals The book reflects the outcome of an NATO work shop and brings to mind two important questions considering the mass of relevant literature available is there any necessity for a new series of books and considering the flood of comparable meetings is there any point in workshops of this nature and their publication In order to deal with such questions adequately much more space would be needed than is available in a foreword Thus the answers must remain rather superficial and of course rather subjective To simplify the issue the question of publication can be narrowed down to two factors the financial risk undertaken by the publisher and the scientific risk borne by the editor If the book is good with respect to layout and content it will be a success nothing will be lost the people involved will enhance their reputation We are left with the question of the usefulness of workshops Without doubt it is indeed a useful procedure for experts to come together in an atmosphere of harmony and freedom from external pressures and time limitations to discuss a well defined theme Whether in agreement or disagreement a fair and open forum can be expected for a variety of contributions

Central Regulation of Autonomic Functions Arthur D. Loewy, K. Michael Spyer, 1990-06-07 This unique text relates the

dramatic advances of modern neurobiology to our understanding of the structure and function of the autonomic nervous system providing a clear view of the central neuronal components involved in autonomic control. The scope is wide ranging from anatomical pathways and molecular pharmacology to the perceptual qualities of autonomic sensation and their potential in modifying behavior. Essential background information is reviewed and the most recent research discussed in a readable informative manner. The text is richly illustrated. The first six chapters offer a comprehensive review of the system's anatomy, physiology and pharmacology, emphasizing the organization and control of the autonomic preganglionic neurons and the complexity of central pathways. Later chapters review the autonomic control of cardiovascular, sexual, urinary, endocrine and other functions. Written by an international group of distinguished scientists, this work is a valuable resource for clinicians, scientists and graduate students in the fields of anatomy, physiology, pharmacology and neuroscience.

The Release of Catecholamines from Adrenergic Neurons David M. Paton, 2016-06-06. The Release of Catecholamines from Adrenergic Neurons focuses on the processes involved in determining the release of catecholamines from neurons, noting the influence of alcohols, analgesics and acids in the release. The selection first discusses biochemical and ultrastructural studies of the mechanism of release as well as release of constituents of noradrenergic vesicles upon nerve stimulation, constituents of noradrenergic vesicles and mechanism of release. The book then takes a look at the role of calcium in catecholamine release from adrenergic nerve terminals and presynaptic adrenoceptors and regulation of release. Topics include calcium dependent versus calcium independent noradrenaline release, differences between the presynaptic and postsynaptic alpha adrenoceptors and influence of neuronal uptake of noradrenaline on the negative feedback mechanism mediated by presynaptic alpha adrenoceptors. The publication reviews presynaptic muscarinic receptors and inhibition of release, including muscarinic inhibition of noradrenaline release evoked by electrical stimulation of sympathetic nerves, effect of muscarinic agonists on noradrenaline releasing procedures independent of calcium ions and possible physiological and pharmacological significance of the muscarinic inhibitory mechanism. The text also ponders on the role of prostaglandins, cyclic adenosine monophosphate, analgesics, peptides, acids, anesthetics and alcohols in the release. The selection is a dependable reference for readers interested in the study of the release of catecholamines from adrenergic neurons.

**Cell Fusion** A.E.

Sowers, 2013-11-11. Over the last decade the volume Membrane Fusion edited by Poste and Nicholson has probably served as one of the major sources of review information on fusion in membrane systems. Since its publication much new information has been collected. New methods of inducing fusion have been invented or discovered and new applications for fusion have been found. The need for an up to date monograph that covers and integrates these subjects, reviews established material and rationalizes and integrates the old and the new is thus obvious. This book is the product of efforts to meet this need. Most of the current work in the field of membrane fusion takes place within the context of intact or modified cells. Hence this book emphasizes the plasma membrane. Each chapter is either a review, a report or a short historical overview depending

respectively on whether the subject is large in scope and has a long history or the subject is in such an early stage of development that most of what is known is still in the hands of a relatively small number of investigators and is best covered in report form      **The Journal of Pharmacology and Experimental Therapeutics** ,1979
