Handbook Of Poisoning 10th Edition Prevention Diagnosis And Treatment:

Handbook of Air Toxics Lawrence H. Keith, Mary Walker, 2020-09-10 The Handbook of Air Toxics compiles, defines and clarifies several methods and concepts of airborne toxic substances found in the environment. This comprehensive reference helps regulators, consultants, and other environmental professionals meet the challenges of sampling and analysis, emissions reductions, and health and safety issues related to human exposure. It is an important reference addressing the ongoing concern about the consequences of air pollution and the implementation and modification of the Environmental Protection Agency's EPA Clean Air Act. Some of the methods described in the Handbook of Air Toxics include fluorescence, thermal desorption, selected ion monitoring, ion chromatography, light microscopy, specific electrode analysis, titration, colorimetry, atomic absorption, and spectrophotometry. It also covers the use of isokinetic sampling trains, midge impingers, carbon molecular sieves, and sampling canisters in the analysis of air toxics. The Handbook also contains recommendations from the EPA for analytical methods for those air toxics where methods do not already exist and provides advance information on future method development by the EPA.

The National Toxicology Program's Chemical Database Lawrence H. Keith, Douglas B. Walters, 1991-12-31 This database provides a vast amount of information about potentially toxic chemicals to regulatory and research agencies, consultants, academics, and libraries. The National Toxicology Program's Chemical Database consists of eight volumes containing 50 fields that present detailed information on 2,270 different chemicals. The data is obtained from the literature or experimentally determined. Each compound is listed in every volume even when there is no information available for it in some volumes. Information in the NTP database was gathered and updated as compounds were used throughout a 12-year period from 1979 to 1991. Throughout the eight volumes, the primary chemical name and the Chemical Abstracts Service Registry Number (CAS No.) remain constant, and all 2,270 chemicals are listed alphabetically in each volume. The NTP database can be sold as a set or individually. Each volume consists of one 3.12 and two 5.14 diskettes, in addition to a 64-page manual that describes how to use the software. Diskettes will run on IBM or IBM compatible equipment with DOS 2.0 and higher, 640K internal memory (RAM), and a hard drive with at least 2.17MB of available disk space. Use the eight volumes together to get the full benefit of the NTP Chemical Repository Database, or select only those volumes that contain the information you need and use them as stand-alone databases. Each volume consists of one 3.12 and two 5.14 diskettes that will run on IBM or IBM compatible hardware.

The National Toxicology Program's Chemical Data Compendium Lawrence H. Keith, Douglas B. Walters, 1991-12-19 This Compendium provides a vast amount of information about potentially toxic chemicals to regulatory and research agencies, consultants, academics, and libraries.
