Fox, 2013-11-21 Worldwide 500 000 shipments of materials which pose chemical physical or biological risks to human health property or the environment are made each day by air rail road sea and inland waterways totaling over 3 6 billion metric tons each year To ensure safety during transportation the 2 means by which these dangerous goods and hazardous materials are packaged and handled is prescribed by international authority including the United Nations the International Maritime Organization the International Atomic Energy Agency the International Civil Aviation Organization and the International Air Transport Association as well as national authorities such as the Department of Transportation in the United States In fact the United Nations establishes model regulations that function as recommendations addressed to international organizations and national governments At the core of regulation lies hazard

identification once accurately identified the hazards of dangerous goods may be communicated and the material safely packaged segregated transported and handled by qualified personnel. Incorrectly identified materials increase greatly the risk of explosion fire poisoning or some other mishap. To aid identification each authority maintains a list of the articles substances and materials it regulates comprising thousands of entries including chemical names industry specific terms trade names generic descriptions and other specialized terms common to the language of transportation. While much of this language is recognizable some is less well understood even to transportation environmental and health professionals.
