*Handling Experimental Data* Mike Pentz, Milo Shott, 1992      **The Handling of Experimental Data**, 1970      **The Handling of Experimental Data** Open University. S100 Science Foundation Course Team, 1970      **Multiaxial Notch Fracture and Fatigue** Xiangqiao Yan, 2023-02-28 This book presents the unified fatigue life prediction equation for low medium high cycle fatigue of metallic materials relevant to plain materials and notched components The unified fatigue life prediction equation is the W hler equation in which the stress based intensity parameter is calculated based on the linear elastic analysis A local approach for the static fracture analysis for notched components is presented based on the notch linear elastic stress field In the local approach a stress intensity parameter is taken as a stress based intensity parameter Experimental verifications show that the local approach is also suited for the static fracture analysis for notched components made of ductile materials The book is also concerned with a material failure problem under the multiaxial stress states A concept of the material intensity parameter is introduced in this book It is a material property parameter that depends on both Mode I fracture toughness and Mode II or Mode III fracture toughness and the multiaxial parameter to characterize the variation of the material failure resistance notch fracture toughness with the multiaxial stresses states The failure condition to assess mixed mode fracture of notched or cracked components is stated as the stress based intensity parameter being equal to the material intensity parameter With respect to the traditional S N equation a similar S N equation is presented and verified to have high accuracy This book will be of interest to professionals in the field of fatigue and fracture for both brittle and ductile materials      The Handling of Experimental Data Open University.
