L'anatomie d'une institution scientifique:

L'anatomie d'une institution scientifique Roger Hahn, 1993 L'auteur explique comment l'Académie royale des Sciences créée par Colbert sous Louis XIV réussit à survivre aux diverses crises du XVIII^e siècle y compris celle de la Révolution tout en maintenant sa mission créatrice au cœur de la recherche scientifique française Cette étude appuyée sur une riche documentation tirée en grande partie des fonds manuscrits de l'Académie est la première depuis un siècle qui détaille les ressorts de cette importante institution qui avait autrefois porté la science française son faste Elle est précédée d'une préface rédigée par l'académicien et mathématicien Andrzej Lichnerowicz , **The European Origins of Scientific Ecology** Pascal Acot, 2021-01-07 Over the last few decades historians of scientific ecology have brought to light the role of the European scientists who have laid the basic cornerstones of modern ecology between the end of the eighteenth century and the beginning of the twentieth century The foundations of geobotany were laid by Alexander von Humboldt 1769 1859 Augustin Pyramus de Candolle 1778 1841 Alphonse Jules Dureau de la Malle 1777 1857 Gaston Bonnier 1853 1922 and Charles Flahault 1852 1935 biocenotics by Erasmus Darwin 1731 1802 Charles Lyell 1797 1875 Pierre François Verhulst 1804 1849 Charles Darwin 1809 1882 Karl Moebius 1825 1908 Charles Valentine Riley 1843 1895 and François Alphonse Forel 1841 1912 agrochemistry and microbiology by Justus von Liebig 1803 1873 Jean Baptiste Boussingault 1802 1887 and Stanislas Winogradski 1856 1953 the taxonomy of communities by August Heinrich Grisebach 1813 1879 Anton Kerner von Marilaun 1831 1898 Alphonse de Candolle 1806 1893 and Charles Flahault and anthropogeography by Karl Ritter 1779 1859 Elisée Reclus 1830 1905 and Friederich Ratzel 1844 1904 Together they created the conditions that with Eugenius Warming 1841 1924 gave birth to the autonomous discipline of scientific ecology thirty years after the German biologist Ernst Haeckel 1834 1919 had christened this new branch of biology Up to now the writings of these scientists have been scattered in various publications that were often not accessible which made a comparative study almost impossible There was thus a need to bring together the primary sources in their original form pagination and language whenever possible a version of the text has been made available in a second language as well They are gathered here in two volumes in an analytical framework that aids in understanding their relevant historical context and significance To deal with the complex multidisciplinary roots of the history of ecology Pascal Acot has brought together a group of historians with authoritative knowledge of the field's various sub branches without ever losing sight of ecology's relationship to the broader history of biology and the environmental sciences **A Bridge between Conceptual Frameworks** Raffaele Pisano, 2015-06-30 This book analyzes scientific problems within the history of physics engineering chemistry astronomy and medicine correlated with technological applications in the social context When and how is tension between disciplines explicitly practised What is the conceptual bridge between science researches and the organization of technological researches in the development of industrial applications The authors explain various ways in which the sciences allowed advanced modelling on the one hand and the

development of new technological ideas on the other hand An emphasis on the role played by mechanisms production methods and instruments bestows a benefit on historical and scientific discourse theories institutions universities schools for engineers social implications as well Scholars from different traditions discuss the emergency style of thinking in methodology and in theoretical perspective aim to gather and re evaluate the current thinking on this subject It brings together contributions from leading experts in the field and gives much needed insight into the subject from a historical point of view The volume composition makes for absorbing reading for historians philosophers and scientists

The History of Cartography, Volume 4 Matthew H. Edney, Mary Sponberg Pedley, 2020-05-15 Since its launch in 1987 the History of Cartography series has garnered critical acclaim and sparked a new generation of interdisciplinary scholarship Cartography in the European Enlightenment the highly anticipated fourth volume offers a comprehensive overview of the cartographic practices of Europeans Russians and the Ottomans both at home and in overseas territories from 1650 to 1800 The social and intellectual changes that swept Enlightenment Europe also transformed many of its mapmaking practices A new emphasis on geometric principles gave rise to improved tools for measuring and mapping the world even as large scale cartographic projects became possible under the aegis of powerful states Yet older mapping practices persisted Enlightenment cartography encompassed a wide variety of processes for making circulating and using maps of different types The volume s more than four hundred encyclopedic articles explore the era s mapping covering topics both detailed such as geodetic surveying thematic mapping and map collecting and broad such as women and cartography cartography and the economy and the art and design of maps Copious bibliographical references and nearly one thousand full color illustrations complement the detailed entries

The Sèvres Porcelain Manufactory Beatrice Pannequin, Tamara Préaud, Karole Bezut, Antoine D'Albis, Bard Graduate Center for Studies in the Decorative Arts, Laurie Dahlberg, Anne Lajoix, Sylvie Millasseau, 1997-01-01 The tumultuous years of the French Revolution left France s prestigious decorative arts industries poised on the brink of ruin It was not until after the fall of the monarchy and the ascendancy of the Consulat and Empire under Napoleon that they began to recover so that by the middle of the nineteenth century they stood at the pinnacle of their achievement This book is the first in depth study of the renowned porcelain works at Sèvres during its virtual rebirth under the 47 year direction of the scientist teacher and administrator Alexandre Brongniart Some 110 working drawings from the Sèvres Archive are reproduced here for the first time in color They celebrate the high skill of the artists whose work often documented contemporary events in France There are table services in the Egyptian and Etruscan taste as well as individual pieces that recall Napoleonic military campaigns There are also exquisite Neoclassical decorations using motifs such as birds butterflies and insects that reflect the century s early fascination with the natural sciences The repertoire of nineteenth century eclecticism is evident in the output of Sèvres from the revival of Gothic and renaissance motifs to the outburst of naturalism Eleven essays by leading authorities assess this dynamic period

Early Days in Complex Dynamics Daniel S.

Alexander, Felice Iavernaro, Alessandro Rosa, 2012 The theory of complex dynamics whose roots lie in 19th century studies of the iteration of complex function conducted by Koenigs Schoder and others flourished remarkably during the first half of the 20th century when many of the central ideas and techniques of the subject developed This book paints a robust picture of the field of complex dynamics between 1906 and 1942 through detailed discussions of the work of Fatou Julia Siegel and several others Tracés , **Navigational Enterprises in Europe and its Empires, 1730-1850** Rebekah Higgitt, Richard Dunn, 2016-02-19 This book explores the development of navigation in the eighteenth and nineteenth centuries It examines the role of men of science seamen and practitioners across Europe and the realities of navigational practice showing that old and new methods were complementary not exclusive their use dependent on many competing factors *La lumière au siècle des Lumières & aujourd'hui* Jean-Pierre Changeux, 2005 A la fois scientifique artistique et philosophique La Lumière au siècle des lumières et aujourd'hui vise à confronter l'évolution de la connaissance et du développement des techniques à celle de l'art et du goût en s'appuyant sur les recherches et les découvertes effectuées au XVIIIe siècle La présentation simultanée d'œuvres d'art d'objets et de documents scientifiques leur intégration à l'histoire des idées illustrent l'impact du développement du savoir et de la méthode scientifique dans l'évolution des mentalités qui conduisit à la mise en place d'une société civile républicaine et démocratique Neurobiologiste Jean Pierre Changeux est professeur au Collège de France et à l'Institut Pasteur et membre de l'Académie des sciences *Les mondes coloniaux à Paris au XVIIIe siècle* Anja Bandau, 2010 La globalisation n'a pas commencé hier le long processus de la colonisation n'a pas seulement changé les pays colonisés mais aussi les États européens qui semblaient pourtant être au centre de ces transformations sans en être affectés Ce volume rassemble des spécialistes internationaux de différentes disciplines pour montrer que le XVIIIe siècle français était bel et bien pris dans l'enchevêtrement des mondes extra-européens La mode et l'écritisme la biologie et la littérature les systèmes de savoir et les programmes politiques toutes ces sphères étaient transformées par les découvertes et les acteurs extra-européens Comme l'indique le titre Les mondes coloniaux Paris au XVIIIe siècle Circulation et enchevêtrement des savoirs l'objectif des études réunies dans ce volume est de donner une valeur programmatique à l'entrelacs des histoires française et extra-européenne en s'appuyant sur le concept d'histoire croisée Paris apparaît dès la fin du XVIIIe siècle comme lieu de convergence et de changement du savoir colonial mais aussi des enjeux liés à la colonisation elle-même Ce recueil va cependant au-delà de cette constatation en montrant que cette position n'était pas incontestée Certains projets ne peuvent être compris que dans le contexte de la concurrence et de la coopération européennes Dans d'autres cas ce sont les académies de province et les institutions scientifiques dans les colonies qui changent des informations sans passer par Paris et contestent ainsi la situation de monopole de la capitale française Ce volume se veut une contribution une meilleure compréhension de l'histoire européenne inscrite dans l'enchevêtrement colonial il se veut également une réflexion critique sur la circulation des savoirs leur cartographie et leurs significations Fontenelle Simone Mazauric, 2007-09-19 Si Fontenelle 1657-1757 est surtout connu

comme l'auteur d'un ouvrage de vulgarisation scientifique les *Entretiens sur la pluralité des mondes* 1686 on sait généralement beaucoup moins qu'il a exercé durant plus de quarante ans la fonction de secrétaire perpétuel de l'Académie des sciences créée par Colbert en 1666. C'est dans le cadre de cette fonction qu'il a rédigé avec un talent exceptionnel les *Eloges des académiciens* de 1685 et les volumes de l'Histoire de l'Académie royale des sciences qui constituent les textes fondateurs d'une nouvelle discipline l'histoire des sciences que philosophes et savants comme Voltaire d'Alembert et Condorcet Montucla et Bailly pratiqueront leur tour tout au long du XVIII^e siècle et dont la pratique s'est depuis lors constamment poursuivie. C'est cette invention de l'histoire des sciences que l'ouvrage de Simone Mazauric se propose de reconstituer en rappelant d'abord les circonstances particulières et tout fait remarquables de leur composition au premier rang desquelles figure la fondation des grandes académies scientifiques européennes. Mais aussi et avant tout cet ouvrage permet de découvrir la manière dont pour la première fois cet événement majeur dans l'ordre intellectuel qui a constitué la naissance de la science moderne en Europe a pu être perçu et interprété par celui dont ses successeurs même pour s'en distancier ne cesseront de s'inspirer.

Georges Cuvier Philippe Taquet, 2006-04-28

Georges Cuvier 1769-1832 fondateur de l'anatomie comparée et de la paléontologie a été l'une des grandes célébrités scientifiques du début du XIX^e siècle. Son œuvre de zoologiste a bouleversé nos connaissances de la nature et des mondes disparus. Avec lui l'homme se penche sur le passé de la Terre et sur les catastrophes qui ont marqué l'histoire de la vie. Mais Cuvier nommé tout jeune au Muséum en pleine Révolution française fut aussi un homme de pouvoir jaloux et admiratif qui traversa les régimes en ces temps troublés. Philippe Taquet reconstitue pas pas la vie de cet illustre naturaliste partir de nombreux documents inédits. Il raconte d'un jour
