Die entdeckte Natur Speer, 2021-12-06
 This volume deals with the discovery of nature in the 12th century focusing on its epistemological consequences for the speculative understanding of nature
 A symbolic understanding is gradually replaced by an original interest guided by reason alone in the structure constitution and process of the physical world
 The growing knowledge of the natural world which took the form of a systematic knowledge of causes parallels attempts to establish a coherent scientia naturalis
 The main protagonists of the so called School of Chartres characterize the goal of this philosophia mundi by reference to Timaeus 28A as a search for the legitimate cause and reason of natural beings and structures
 This incremental discovery of nature is linked to the development of physics as a science of nature it leads to an veil m taphysique
 M D Chenu and must be understood as one of the most important causes for the growing interest in Aristotle s writings and in particular with the libri naturales
 The discovery of nature in the 12th century thus provides an important philosophical impetus for the wider assimilation of the Aristotelian corpus
 At the same time it leads to the development of an original and distinctively medieval model of natural philosophy
